This device is simple, being composed of but three parts—two side pieces and a short file. It is easily adjusted at once. A child can operate it perfectly and do as good work as a machine shop.

It will adjust itself to any make or style of skate.

It always works and may be carried in the pocket.

This cut shows the natural method of using.

Sells on Sight. **Send for Price.**

The National Hardware Association.

We devote considerable space in another part of this issue to an account of the recent gathering in Cleveland, where representatives of a large number of leading wholesale Hardware houses of the country met for the purpose of considering the advisability of forming a national association. A perusal of this account will show that their labors were abundantly crowned with success, and that, with care and judgment, they have laid the foundations for an organization that we believe will, from the very start, take a prominent position in the Hardware world, and have a great and beneficial influence upon the trade. It is hardly necessary for HARDWARE at this late date to express itself as in favor of organization, and of stated gatherings where members of the trade can meet for acquaintance, the formation of closer business relations, and to arrange for measures which are recognized as needed for the protection and advancement of the trade. Emphatic expression was given some issues since in these columns, in favor of national organization, and the form in which that idea has taken shape is perhaps as good as any which could have been suggested.

The gentlemen who met at Cleveland were representative men, and although as many houses were not there represented as might have been had the call been longer in duration, yet it is generally felt that at the next annual meeting in Pittsburg, in November, 1895, there will be a great many more present than were in Cleveland.

The gentleman in whose hands the interests of this association have been placed are men of wide experience in these lines of labor, occupy personally high places in the Hardware world, and, by their knowledge and conservatism, have proven, in other walks of life that no better selections could have been made of a staff of officers upon whom is dependent in a large measure the success of this organization.

The most hearty congratulations should be extended to the local manufacturers and jobbers of Cleveland who so generously entertained the visitors, and who left nothing undone to make their stay in the Forest City one of great pleasure.

We are sure that the National Hardware Association will be heard from, and felt with beneficial effects, through many years to come.

Hope and the Holiday Season.

The date borne upon the cover of to-day's issue, December 25, 1894, marks the return of another Christmas holiday, and upon this happy occasion, when all the world is rejoicing in the improved prospects that are ahead of us,—and, let us hope, feeling thankful that the dark days of the past have not been as gloomy as they might have been,—HARDWARE desires to send its personal holiday greeting to that great army of friends in all parts of the country, who have so generously and loyally sustained it during the past year, and whose encouragement has been given in most practical forms.

We desire to congratulate the entire country, that things are as well with the average business man as they now are, and to express the hope that is almost a conviction, that 1895 will see a more sure and steady prosperity than has been noted for several years past. We use the word sure, advisedly, in this connection, as the two years of depression through which we have passed, have demolished fictitious booms, have reduced things to their actual values, have cleared away the rubbish of misunderstanding and misapprehension, and brought the business interests of the

Digitized by Google

country down to bed-rock. Certainly no situation, in a business sense, can be better than that in which everything is reduced to its actual value. There is certainly one method by which the promises of 1895 can be realized, and that is for each business man to determine that so far as within him lies he will let apprehension be replaced by confidence, inactivity by labor, and despondency by that hope which has been the mainspring and motive power of the American people since we became a nation.

One of the greatest abuses to which the Hardware trade is subjected is the warranting of some of the mechanics' tools, which is still in vogue in many quarters. Axes are brought back, which look as though they had been purchased by the bearer's grandfather when he attained his majority. The usual gag is, "It's too soft," etc. Well! "it's too hard" on the manufacturer to exchange this antediluvian article for a new one; but here intervenes the commercial logic—"if we don't, he'll never buy another dollar's worth of goods from us—and probably influence the rest of the family to pay more money for the same goods somewhere else." So he gets a brand new axe for one which the last possessor threw on the junk heap that very morning, having had the worth of his money out of it.

It is with pleasure, not unmixed with pride, that we call the attention of the trade to the fact that this issue of HARDWARE is the largest and most important that we have ever issued. The demands upon our space, especially in the line of advertising, have been such that this enlargement was a matter of actual necessity, and it is a gratifying fact that this illustrates not merely that HARDWARE is being successfully supported by the trade it represents, but also that times are so improving that manufacturers, wholesalers and jobbers are coming to the front with old-time push and enterprise.

F. E. Myers & Bro., Ashland, Ohio, manufacturers of Pumps and Hay Tools, have issued a very artistic wall calendar, measuring some feet in length, and containing upon it in vivid colors, representations of the immense line of goods sold by them. This calendar, hung in the store of any retail dealer, will assist him very greatly in the sale of goods, as all who are inclined to the use of articles of this character, will see something thereon of which they are in need; and a constant investigation of the picture, at their various calls to the store, will get them in such frame of mind that they will have to buy. We suggest to dealers that they send to the company for a copy of this calendar.

The Standard Fiber Ware Co., Mankato, Minn., have kept steadily upon their way during the recent hard times, holding their own and increasing their trade and usefulness as opportunity presented. In addition to their well-known lines of water and other pails, slop jars, wash basins, spittoons, etc., etc., they are just adding an Improved Pail which they believe will equal anything of the kind manufactured. Detailed information concerning it will be given at a later date.

We regret to learn of the continued illness of Irving Lawrence, who for so many years—we think over twenty—has been the "right bower" of Peter McCartee, the vice-president of the Stanley Works. His genial face and well rounded form is greatly missed from his accustomed desk, he having been there only a few times in three months. May he soon be able to enjoy life to better advantage.

J. H. Sternbergh & Son, Reading, Pa., long established and well-known manufacturers of every variety of bolts, and nuts, boiler rivets, etc., have perfected improvements for the manufacture of soft steel set screws and tap bolts of the highest grade of excellence, and solicit inquiries of Hardware dealers.

The Manufacturers' Meeting.

Those having in charge the arrangements for the coming meeting of manufacturers in Cincinnati, Ohio, have issued a statrment in which they say: It is with great pleasure that the committee of arrangements announces assured success and a large representative attendance promised for the National Convention of Manufacturers, which will be held in Cincinnati, January 22d, 1895. This result is largely due to the generous and unreserved support which has been accorded to the movement by industrial periodicals of the country and the press at large. The gentlemen who will come together upon the 22d of January next, will come uncommitted to any policy other than the promotion of the general welfare. It is hoped that by their combined thoughtfulness and wisdom a framework may be constructed upon which shall rest an organization, whose force for good will be felt throughout every section of country. Where the future headquarters of the Association shall be located, or who will be its officers, are matters of detail, which no effort has been made to forcast or forestall. If the strong and earnest workers who have made our country the greatest manufacturing country on earth, will come together, our citizens will bid them welcome and our committee expects to point with pride to the structure which they will erect.

Hartford Hardware Clerks.

A prosperous organization of the Hardware clerks of Hartford, Conn., is in existence. Its object is to improve social acquaintance and promote a more friendly feeling among its members; to give an opportunity for discussion and interchange of opinion on any topics of general interest to the Hardware trade: and to secure united effort and influence in any worthy cause which may properly receive its attention. Early in October about twenty of the clerks met in McKinlay club hall and talked over the advisability of forming such a society. The organization was perfected at subsequent meetings with the following officers: President, F. C. Bidwell, of Tracy & Robinson; vice-president, F. G. Allen, of Blodgett & Clapps; secretary, J. F. Murray, of Wooley Hardware Co.; treasurer, E. R. Clark, of Francis & Co.; and an executive committee of the above officers with William B. Tifft, of Tracy and Robinson, and R. E. Page, of Storrs & Candee. It was decided that the society should meet the first Monday of every month. This movement seems to be one of an admirable character, and might well be followed by like organizations in other sections

Upon page 61 of this issue something in the nature of a surprise is promised by the Central Oilgas Stove Co., Florence, Mass., with offices in New York, Boston, Chicago and San Francisco. They promise that in addition to their popular, varied, and extensive lines, they will also place on the market specialties in new goods that they believe are bound to prove popular "both by reason of low prices and their many attractive features." In addition to their new and popular lines, they will also have something entirely new in the line of their well-known Oilgas Cook Stoves, containing their new burners that, as they say, "are giving such perfect satisfaction." They also call especial attention to their new catalogue for 1895, which will be ready for distribution within a few weeks. As dealers at this time are greatly interested in stoves of this character, it will be worth their while to peruse the announcement of this company upon the page referred to, and also obtain from them detailed information as to their plans and prospects for the coming year.

W. C. Mills, buyer for the W. Bingham Co., Cleveland, Ohio. and R. C. Rogers, manager of their house-furnishing goods department, have resigned their positions with that concern, to accept others with the Marshall-Wells Hardware Co., Duluth, Minn.

Word comes from Pittsburg that the works of the Carnegie nail factory at Beaver Falls, Pa., recently destroyed by fire, are to be rebuilt at once, and that the same will be in operation within a few weeks.

Digitized by Google

Hardware in the South.

A PROMINENT MERCHANT WHO HAS BEEN THROUGH THAT FIELD, ADVANCES SOME IDEAS THAT ARE WORTHY SERIOUS ATTENTION.—PRICES.—QUOTATIONS THAT MISLEAD.—STOCKS IN HAND.

EDITOR HARDWARE: The writer has recently made a trip through North and South Carolina, and he finds that the low price of cotton interferes very materially with present purchases by merchants in that section, especially so when you attempt to sell them future goods, for cotton being down to about 4½ cents per pound, they feel that later on all Hardware will be much cheaper than it is to-day, as they express it; that goods must come down to be in keeping with the price of cotton.

We do not see how it is possible for Hardware to get any lower than it is at the present time. During the past six months many sharp declines have taken place on Hardware, when it was our opinion on July 1st last that prices would improve rather than decline. We think that the manufacturers are largely responsible for the low prices now existing on Hardware, in that they are all cutting at each other to a greater extent even than the jobbers are cutting at each other. If we wish to place an order for staple goods, and can do so guaranteed against other manufacturers, it is only a question of a few hours or days when we can procure lower prices than those ruling at the time we would make the contract.

We sold on the eighth of November a small lot of wire nails —22 kegs—at $1.10 basis f. o. b. factory, which at that time was as low a price as the party could get. We ordered the goods from Pittsburg on the 10th; they were shipped on the 13th, and we billed the same on the 16th, and before our customer could get our invoice he had been quoted wire nails at 92½ cents per keg, this decline taking place between the 8th and the 16th insts., and came from a manufacturer or manufacturer's agent.

We are bothered considerably in having people write us that they are quoted goods cheaper than we sold them, and when we investigate it, they have received quotations from some local broker or agent naming prices on quantities much larger than the merchants receiving quotations can buy, but at the same time they use these quotations against us, without stating that it is a car-load price, or price on a larger quantity than they purchase from us. Ridiculously low prices are also many times by mistakes made by traveling salesmen, or by merchants misunderstanding a verbal quotation.

Stocks of Hardware through the tobacco and cotton sections are not large at all, and when the spring trade opens in January, we expect to get assorted orders from all of our customers, as we know the goods will be needed, though if prices continue to decline we will be forced to sell 25 per cent. more goods in bulk to keep up our sales in dollars to what it was a year ago. We would much prefer goods being higher in price than they are now, even if we could not make a larger per centage, for even then we would make more money, and until the manufacturers come to some definite conclusion that they will get higher prices for goods, or enough of them break to allow those remaining to get a fair return for their labor and expense, we do not see what the jobbers can expect from each other, when the factories are continually cutting and slashing prices, which very naturally reflects on us, especially so when we are forced to sell goods on the declining markets that have existed during the past four years.

Some eleven years ago jobbers in this section were selling exclusively to general stores, but now in many small towns retail Hardware stores have monopolized the business, and now, instead of buying all their goods from one concern, they are buying from the manufacturers and manufacturers' agents largely, and many times buy more goods than they should to obtain a low price, and then unload on their neighbors at a price that we jobbers could not meet and make a living profit.

We feel that the actual decline on Hardware during the past six months will be fully 15 to 20 per cent. up to the present time. The Southern Hardware Jobbers' Association, which met here in June last, formulated plans for selling and buying certain lines of goods, some of which have held together to the present time, and some have been a failure; but each year we learn some things by coming in contact with each other as we do now yearly, and we look for a large benefit from our association in the future.

We bought to-day a car load of nails at a price of 23 cents per keg cheaper than the highest price which we obtained on inquiries sent out last Friday to four different factories, which will give you an idea that some of them are either making considerable money or others are losing largely, and they all claim that they are not making any returns whatever from their plant or investment.

We do hope things will improve in the near future.

Very truly yours,

WATKINS HARDWARE CO.,

Chas. H. Watkins, Pres.

Richmond, Va., December 17, 1894.

Some Points on Vapor Stoves.

The Dangler Stove & Mfg. Co., Cleveland, Ohio, are now recognized, as they have been for the past fifteen years, as eminently progressive and constantly on the alert to bring out improvements. As is well known, Vapor Stoves have become a household necessity, and this is especially true in families where the advantage of labor-saving and economical cooking stoves are necessary. In getting up their New Gem, they kept in view the condition of the times, in getting up a stove at a price that would come within the reach of the masses—in a word, "stove for the people and for the times." The striking features which they advance for this stove are:

"First: The convenient and attractive construction.

"Second: The great heating power and great economy.

"Third: The absolutely safe, removable tank.

"Fourth: The original cost is only a trifle more than one-half that of the regular high stoves.

"Fifth: Of special advantage to the dealer, as he will have no competition on this stove, being absolutely controlled by them, and made under strong, fundamental patents."

Assessing Imported Tires.

The Treasury Department has issued for the instruction of collectors of customs the decision of the Board of General Appraisers in the matter of the importation of puncture proof bicycle tires. F. B. Vandergrift & Co. protested against the action of the collector at New York, in assessing duty on these articles. The firm claimed that they should have been assessed 30 per cent. ad valorem, and the appraisers and the department reversed the collector's decision. The Treasury department has now directed all collectors to assess tires consisting of cotton cloth in the form of tubing heavily coated with india rubber and stuffed with raw cotton, at 30 per cent, ad valorem. The question at issue was, which of the materials india rubber or cotton, was of the greater value.

The Western New England Iron, Steel & Hardware Association met at the board of trade rooms, Springfield, December 14th, and after a short session devoted to a discussion of matters pertaining to the trade, adjourned to the Nayassett Club for dinner. About twenty members attended, and L. L. Ensworth, of Hartford, president of the association, called the meeting to order. These gatherings are held in the different cities in this part of New England every two months for the purposes of sociability, discussion of trade matters and a banquet.

Information comes from South Milwaukee, Wis., that W. H Hatch, president of the Hatch Cutlery Co., emphatically denies a report to which currency had been given, that the works are to be removed. As an evidence of the force of his statement, it may be added that the regular force have once more gone to work after a week's shut-down for repairs on the electrical appliances.

The table cutlery found in the ruins of ancient Memphis included no forks. We are forced to the conclusion that the ancient Memphian ate his pie with a knife.—*Kansas City Journal*

"Hop's" Corner.

George Pixley, of the Monarch Cycle Co.'s eastern branch, was seen on the Sixth Avenue "L" lately, with a heavy overcoat buttoned about his Apollo-like form, and with a last year's straw hat crowning his "tank of thought." This looked so "diversely diverse," without the accompainment of a pair of russet shoes, we enquired, "Why! Oh why!" and found he had been wrestling all morning with eleven new agents, delivering his lecture with the new "Monarch" samples, just received, for a text, and his labor had been so great he was in danger of collapse or a brain fever. So like

The Southerner which Dickens saw,
He took refreshment thro' a "straw,"

but he bought an "Alpine" before he returned, just the same.

The shining morning faces of the "long term" traveling men, are again beginning to be noticeable on the Rue de Warren, Chambers and Reade, and in the various refectories contiguous thereto. The Hardware Club is animated by their presence, escorted by the heads of their respective houses, and even "Hollender's," knows increasing crowds of them putting away provender enough to make it worth while being charged to "traveling" account.

We are especially glad to notice again "in our midst" Joe Weed and friend Beach, who have so long and ably represented John H. Graham & Co. on the road; also George Waterman and Joe Limeburner, of the Guyon Co.'s platoon of hustlers. May they all foot up satisfactory sales.

Brother Walkley the Brooklyn City father, is proud
To uphold the Dutch bands that play long and play loud;
Being familiar with *Notes*, for hard times often force them,
From the Rhine or Chicago, he'll receive and endorse them.

It's the oddest thing to notice what a carpenter sometimes constructs, without ascertaining in advance whether the proper Hardware necessary for the completion of the creation of his fertile brain, can be obtained at "Patterson's" or "White & Van Glahn's," or any other place where everything is supposed to be on draught, in the line of ironmongery.

Tom Priestley, the Hudson Street carpenter, was seen scouring among the trade a few days ago, hunting for a sliding door lock, with a knob on one side and a cup escutcheon on the other; of course nobody had any such piece of conglomerate, but they all wondered what kind of a sliding door formed the "piece de resistence," when it finally came out, it was a door *to lift*.

Another anxious searcher wanted a set of sliding door sheaves for "three-quarter inch stuff;" this was a good one, but we think "Tiebout" had something that filled the bill, that could be put in on the side of the door. So there was "another soul made happy."

It's only recently that the good looking Frank Brechtlein, of Brooklyn, who gets all the contracts for furnishing the Hardware for the new schoolhouses, "beyond the bridge," was roaming through Chambers Street, prospecting for a lot of transom centres, in which *both sides* of the set were "Hole and Pin." He didn't want to "put a penny in the slot" side. He finally found them on Reade Street, and the "Sun shone in Mudville," as De Wolf Hopper would say, but the use he had for them was as puzzling as it was original, for it was to hang some windows that had to revolve on a center placed *top* and *bottom*.

Fred. Peck, who is fairly walking in his august father's footsteps, was in town last week looking after the interests of A. G. Peck & Co., Cohoes, N. Y. "Fred" says that business still keeps up, many orders not being filled yet.

"Hop."

Hardware Club Notes.

The following gentlemen were unanimously elected members of the New York Club, at a meeting of the board of governors, on December 21st:

James Gaunt, No. 32 West Thirty-third Street.

R. L. Coleman, president Western Wheel Works, No. 35 Barclay Street.

Ira Muller, General Manager American Whip Co., Westfield, Mass.

L. A. Stout, No. 81 Warren Street.

Isaac B. Markey, Secretary Eureka Fire Hose Co., No. 13 Barclay Street.

The matter of the annual dinner of 1895 is under discussion by the committee having the details in charge, and full official announcement as to date, place, etc., will be made at an early date.

Victory of the Travers Bros. Co.

After four years of litigation, Travers Bros. Co., the well known cordage and twine manufacturers, of No. 107 Duane Street, New York City, have come out victorious in their suits against the American Cordage Co., which latter company is a part of the National Cordage Co. On December 6th, 1894. Judge Alfred E. Coxe, of the United States Circuit Court, handed down his decision in two suits which the Travers Bros. Co. had instituted against the American Cordage Co., because of alleged infringement on two patented processes used in the manufacture of hammocks. Judge Coxe, in referring to the Travers patents, states in his decision that "there is evidence that this method is simpler and more rapid than the old one; that by it an inexperienced operator can make four or five times as many hammocks as an experienced operator can make by the old method. It saves time and money. Nothing like it was ever done before."

This contest between the Travers Bros. Co. and the American Cordage Co. was, we are informed, "the result of a refusal of the first-named company to accept the terms of the National Cordage Co. to sell out. By private contract with the American Cordage Co. the Travers Bros. Co. bought out the hammock and cotton twine plant of the cordage company, located at No. 615 Fifty-second Street, New York. This purchase was effected on December 5th, and included all the manufactured stock and raw material on hand, as well as that in the hands of agents." Advices come from the Travers Bros. Co. that they intend to continue the manufacture of their Peerless Prize Manilla rope, and they will supply the trade direct. They have in course of erection a new plant for the manufacture of tarred cordage, marline, lath yarn, etc.

The plant of the Armstrong Mfg. Co., Bridgeport, Conn., is one of the largest and most complete of its kind in the United States. This concern manufactures an extensive line of water, gas and steam fitter's tools of uniformly high grade and noted for their time and labor-saving qualities. The improved pipe threading and cutting-off machines, for hand and power, made by the company, are especially popular and there has been a steady demand for them during the current year.

Porter to Partnership.—III.

THE PROGRESS OF A CLERK WHO WAS NOT AFRAID OF WORK.

Of all the good things that came to me in my boyhood days probably none had so direct a bearing upon my prosperity as the offer of Mr. May of the use of his library. I had the average love of reading to be found in most boys; stories of adventure were my especial delight, but I eagerly read stories of any and every kind that came in my way; for heavier reading I had little inclination; books of travel were good if they were well filled with incident, but the descriptive parts I usually skipped. Of course, such a taste as this is not the one most to be commended, but a taste even for story reading is better than to have no taste for any kind of reading. And Mr. May, who seemed to take an interest in me, instead of trying to persuade me to drop stories for other matter, encouraged me to go on, only he laid much stress on the fact that there were many degrees in stories. His library contained a good collection of novels; among them I remember Scott's, James', Bulwer's, Miss Porter's, Miss Edgeworth's and others of those times. Scott's "Ivanhoe" looked rather dry to a boy who had been reading "The Trapper's Feast," but a few words regarding its hero made me desirous of reading it, and through it I became interested in early English history, and I found myself reading history with a greater relish than I had formerly read Cobb's stories. I mention the matter here to impress it upon the clerks who see these chapters, that every young man has it largely in his power to educate himself, and that the evenings spent with good books are the most profitably spent of boyhood.

Between my sixteenth and seventeenth years I grew fast in maturity. I was the oldest child and my mother was poor; what she earned with her needle and my small salary kept a family of five of us. There were no extras about the house nor much but plain fare set before us; our clothes were home made and chosen for service rather than for style. It seems as if life under such aspects was not very pleasant, but there are a great many comforts in life that do not depend on money altogether; we were able to keep out of debt and we had our home and each other, and, thank God, a mother's love is the same let her be rich or poor.

When I was seventeen Mr. Ely said to me that Harry was going to leave, and if I could do the work with a boy to help me, he would advance my salary two hundred dollars a year. I felt abundantly able to take Harry's place, and when he left I began to put in practice a great many ideas that he had laughed at when I had mentioned them to him. I explained them to Mr. Ely and he told me to go ahead.

I think our store was far ahead of the average country store of to-day; I rarely meet in my travels, and I am "on the road" more or less, any store that is kept neater than we kept ours, while I rarely find anywhere many nearly up to it. I had noticed that there were two lines of goods in every branch of trade, one that people bought because they needed, the other of goods they bought because they saw them. This was true in dry goods, it was no less true of groceries, and it was largely so in boots and shoes and hats and caps. In our town it was the fashion to display the staples in each line; we piled unbleached cottons and prints at the door; had boxes showing various kinds of sugars in the windows, and kept a pair of cowhide boots swinging over the door.

I reasoned that these were goods everybody wanted and that everybody bought, and that they rarely bought except when they did want them; they would come in and call for them anyhow; they must have them. But there was a large line of "fancy" goods that came partly under the head of extras that the eye would be pleased with and tempt a purchaser.

We went to work and cleared our show-case of plug tobacco, ladies' hosiery, buff envelopes, etc., and made a brilliant display in it of buttons, ribbons, edgings, braids, and goods of that kind; we put wires over the counters near the ceiling and on them pinned hosiery, handkerchiefs, collars, gloves, and similar articles. In the window where we had been wont to show sugars and a box of bar soap we made a display of raisins, spices, and candy, and on the counter we piled up ground coffee in fancy packages, and chewing tobacco in handsome boxes; the shelves were full of goods having pretty labels, and the grocery department was an ornament to the store.

To anyone who has never tried the effect of a good display of fancy goods, I doubt my ability to convince them of the difference between that method and the old fashioned way of piling everything hap-hazard, but the difference is there and one has but to make a small trial of it to be convinced. Mr. Ely confessed before the first month was over that our trade had increased ten per cent., and the increase was entirely in the fancy goods—the ones we were most anxious to sell.

About this time we began to hear rumors of another store about to be started in town, and before long the story turned out to be a true one; some men were coming from Fairville, a city twenty miles away, and were going to open a general store. The facts were there were already more stores in the place than the place justified; two of them gave their owners a very poor living, and Mr. Ely had made money because he had money and was able to handle everything and carry his trade as they needed. But a firm from the city probably meant sharp cutting and war, and we did not enjoy the prospect. The new store was to be opened in thirty days.

Lying about four miles from our place was a German settlement of about thirty families; they were hard working, thrifty people, and no one of the stores could say it owned their trade. They sold more butter and eggs than any other neighborhood in the county, and I concluded there might be a way whereby we could get their trade and hold it; if we were to have to fight for our trade we might as well begin at once. I suggested to Mr. Ely that he should buy a business wagon, he already had a horse, and that I would go down to the settlement and see what I could do with the people in arranging for a weekly collection of their butter and eggs. He was willing I should make the attempt, so next week I started off one morning on what was my first drumming trip.

Delivery wagons have now become as necessary a part of every business as scales and counters, but many of us can easily remember when people carried home their own goods and when one village dray did all the delivery of heavy goods for a whole town.

Pertinent Advice.

The following excellent advice is taken from an interesting paper read by Wm. H. Allen, of Philadelphia, and of which mention was made in our recent report of the meeting of the Hardware Merchants & Manufacturers' Association of that city:

"I have also learned that business can be conducted actively and yet peaceably, for while not professing to be better than others, I can make the assertion with satisfaction that in the fifty years I have never had a quarrel with any of my fellow merchants, and I expect to continue the same peaceful course to the end. I have learned that straightforward dealings beget confidence, and that it is not only a good principle, but good policy, and that it pays in the long run to do right, and it certainly is a satisfaction to me, at this time, when I know that my active life will soon end, to look back on the experience of the past with so few regrets as to the business principles that have governed me.

"I do not wish you to infer from my remarks that any of you need a lecture as to how to manage your affairs, or that you have not used your time as profitably, but I have been asked to tell what I have learned, and I have told you. Let us all so conduct our affairs that when the great balance sheet of eternity is diplayed, and all our earthly losses and profits have been counted up thereon, it may show for each one of us that in gaining what we have of this life's riches, we have not fouled our hands or our souls by anything that in that day may cause us shame."

It is reported from Reigelsville, Pa., that Clark & Cooley, who have been manufacturing the Clark Patent Window Screen for the past year, have accepted an offer for their plant from parties at Easton, to which point it will be moved in a few days.

American or Foreign Cutlery.

Robert P. Porter, in a letter to the New York *Press* from Sheffield, quotes a Sheffield manufacturer as saying:

"A knife that will cut is said to be a luxury rarely met with in American hotels," and Mr. Porter himself states: "I am not inclined to deny the allegation in regard to hotel knives, but the general statement is a little broad, and I should like to hear the opinion of some American manufacturers on this point. Certain it is that American axes cut and are famous the world over; why not American knives?"

Landers, Frary & Clark, New Britain, Conn., who are high authority on American cutlery, write to the *Press* in reply:

EDITOR *Press:* Sir—In your issue of October 14th, Robert P. Porter, in one of his interesting letters, says that he would like to have the opinion of some American manufacturer why American table knives used in hotels do not cut. Simply because, for some unexplained reason, the average American landlord persists in using silver-plated knives, and has not yet found out that nothing makes a tough steak tender like a keen-edged knife. No manufacturer ever could or ever can make knives with silver-plated blades that will cut. You cannot find a silver-plated hotel knife in Great Britain or on the Continent, not one.

We have spent considerable time and many arguments with American hotel keepers on this very point, and are happy to say that we have made some progress. Anybody who dines at the Fifth Avenue Hotel or the Windsor Hotel will find dinner knives of as fine quality and as keen-edged as any that can be made. These knives have steel blades and are not plated. You can take the best table knife that ever left a cutlery factory, made of the best steel, ground sharp, and by silver-plating it you will make it dull. This is the only difference between the cutlery of European hotels and that used in American hotels.

In regard to the general quality, style and finish of American table cutlery, we are willing to submit samples at any time to an impartial committee for comparison with the goods of any Sheffield manufacturer, and to accept the judgment of that committee. It may be news to the readers of the *Press*, but it is nevertheless true, that nine dealers in table cutlery out of ten in the United States prefer American table cutlery and will not and do not buy the English make unless it is offered at a cheaper price than the American product.

Yours respectfully,

LANDERS, FRARY & CLARK.

New Britain, Conn., December 4th. C. L. Landers, Treasurer.

The Keating Wheels.

The Keating Wheel Co., Holyoke, Mass., are sending their friends some handsome photographs of their Keating Roadster, which is their model "K" of 1895, the weight of which is but nineteen pounds. These pictures very adequately show what certainly appears to be a very handsome and light machine. Printed upon the back of each photograph is a comprehensive description of the wheel, from which the following is taken: "The Keating Roadster, Model K, 1895, is made in two heights, 22½ and 24½ inches, and is the lightest road wheel that will be put on the market and positively guaranteed. In light weight, ease of running, and rigidity the Keating has always been 365 days ahead of them all, and is still gaining. The following are a few of our '95 improvements: New steering head; new front and rear hubs; new sprocket drum, 5 inch tread; new method of attaching front sprocket; crank and pedal; new design of sprocket teeth; ½ inch chain, direct tangent spokes without bend at the head; new detachable break; three styles of handle bars, best cork grips; elegant name-plate; and bearings positively dust-proof. One improvement for '95 to which we desire to call especial attention is a ball case from which the balls may be instantly removed without special tool, but which will not allow the balls to fall out when axle is removed. Our '95 pedal is an unbreakable combination either rubber or rat trap, and is a marvel of strength and elegance. We shall equip all Keating wheels with the best of wood or steel rims; the best detachable or cemented tires, our famous Keating saddles, and other fittings of the highest quality, in accordance with our determination to make the Keating handsomer and better than any wheel offered in '95. But four road wheels will be manuactured by us this season, viz.: Model K, high frame; and the same wheel with frame two inches lower, which we shall designate as Model K, low frame; our famous ladies' Model No. 10, with drop or curved frame, and our ladies' Model No. 11, with straight frame. These wheels will have the same improvements as described in Model K. In addition to these four, we shall make a special racing wheel to weigh not over 17 pounds, the price of which will be $125."

Make High Grade Buff Wheels.

The firm of Divine Brothers, Chadwicks, N. Y., are said to enjoy "the unique position of being the only concern in the country manufacturing nothing but a full and complete line of high grade buff wheels." They do not confine themselves to any one style of goods, but furnish all weaves and weights of cotton cloths and have a different buff for each kind of work in the buffing business. They handle nothing but the highest grade of cotton goods in the American market, and sell their goods entirely on their merits. B. H. Divine's six years' experience in the cotton mill business, being practically "born and brought up in the business," puts the concern in a position to know whereof they speak, when it comes to the use of cotton cloth in buffs; Mr. Divine left the cotton mill business to assume charge of the superintendent's office in a large metal working establishment in the East, and while there was unable to obtain a satisfactory buff, which induced him to make into buffs some of the cloth made by the concern he had left, which, although expensive, proved to be just what the market wanted, with the result that to-day the concern of Divine Brothers are enjoying a large and successful business, and find that consumers appreciate a first-class article.

Comment on American Tin-Plate.

We have the authority of an American contemporary, HARDWARE, for the statement that skilled tin-plate dippers have been getting as high as two pounds per day in wages, and that one pound per day has thus far, as a rule, been the minimum wage. Of course, this has been in the early days of the new industry, and doubtless all the workmen were skilled men from this country, and equally, of course, such phenomenal wages cannot last, though the workmen are combining to maintain them in face of a general proposal by the manufacturers to bring about a reduction to enable them to continue the manufacture under the reduced import duty. Nearly all the tin-plate works in the States are now closed, however, but if the wages question is settled satisfactorily they will doubtless open again. In fact, it is hardly likely that the large amount of capital invested in starting tin-plate works will be simply thrown away, and some way will be found out of the present difficulty. *Hardwareman* (*London, Eng.*)

The stove manufacturers of Louisville, Ky., are greatly pleased over the lower freight rate, which went into effect some days since. Heretofore the rate to Chattanooga on stoves and stove material has been fifty-seven cents a hundred pounds when shipped in less than carload quantities, and forty cents when in carload lots. This has been lowered to thirty-eight and thirty-four cents, respectively. Chattanooga is mentioned only as an illustration, as the rates to other Southern points are lowered proportionately. The stove manufacturers had been endeavoring for some time to secure a lower rate.

The Waterman Machine Tool Co., Oakland, Me., are running full blast. This is the plant formerly operated by the Dustin & Hubbard Mfg. Co., which has been idle two years. There are seventy-seven men employed. The principal business is the making of knitting machines which are shipped to Providence, R. I. It is understood that the company have orders enough ahead to keep a day and night crew at work for nearly a year. This plant was leased by the company last July for a term of five years.

The Latest Catalogues.

The Jos. Dixon Crucible Co., with works and general offices at Jersey City, N. J., and salesrooms in New York, Philadelphia and San Francisco, manufacturers of crucibles, pencils, graphite axle and machine grease, stove polish, roof and stove stack paint, core wash, electrotyping graphite, belt dressing, cylinder and machine oil, felt erasive rubbers, etc., etc., have issued their catalogue for 1895. The company were originally manufacturers of Dixon's Plumbago Crucibles, known in brass and metal foundries the world over; Dixon's Carburet of Iron stove polish, used in almost every home since 1827; and other graphite products. In 1872 they found themselves with every facility in the way of improved machinery, with the necessary knowledge and experience, and securing a mine of the choicest graphite to be found in the United States, they determined to place upon the market a line of pencils which for workmanship, for uniformity of grading in degrees of hardness, for smooth, tough leads and fine quality, should have no superiors and, perhaps, no equals. In this the company have certainly met with remarkable success. Everything is American about the goods, capital, brains, labor, machinery and so on, but the foreigner has not scrupled to copy every detail of their goods, the Chinaman doing this very successfully, only that the quality is excessively poor. The company now manufacture over five hundred different styles of pencils, which, to a man who was a boy in the last generation, who, when pocketing his Faber, about the only lead on the market, in 1855, must look upon the growth of the industry and the demand now attained as a marvel of an advancing civilization. The catalogue, which consists of forty octavo pages, is finely illustrated. The cover is a work of art. The illustrations of the graphite mine at Ticonderoga, N. Y., and the rafting of cedar logs to the Dixon mill at Crystal River, Fla., are finely executed, as well as instructive.

C. W. Dunlap & Co., with a post-office address Box 2703, New York City, have issued their catalogue for the season, of their line of Housekeeping Hardware and Garden Tools. It comprises thirty-four pages, and is finely illustrated and printed. The line consists of mincing knives, steak pounders, cake turners, fish turners, kitchen forks, skewers of all descriptions; kitchen, bread and hotel bread knives; ham, meat, oyster, clam knives; household hammers for various purposes, tack claws, carpet stretchers, slicers, can openers, clothes sticks, ice picks and tools, lemon squeezers, kitchen tongs which will pick up a pin or a cocoanut, cover lifters and pokers; furnace rakes, cane and umbrella holders, wall scrapers, box scrapers, cold chisels, awls, nail sets, punches, hat hooks, cotton and merchandise hooks, garden and floral sets in all detail. Mr. Dunlap is one of the pioneers in the Hardware trade, and years ago he resolved to make the best of goods—a resolution that he has devotedly carried out through thick and thin. Sometimes the profits were thin and the troubles thick, but he has never wavered, and has gained reward enough to testify to the correctness of his principle.

The Gibbs Mfg. Co., Canton, Ohio, have issued an attractive catalogue which shows their Hardware specialties, which are already so well-known that they hardly need introduction to the trade. Among them may be mentioned can openers, curry combs, garden rakes, trowels and weeders, hand weeders, lawn rakes in great variety, lawn sprinklers, nozzle holders, post-hole diggers, pruning shears, wagon jacks, etc. All these goods are warranted by the makers against imperfect material and workmanship. The catalogue is handy, neat and comprehensive, and upon the cover may be seen a picture of their extensive works at Canton. The catalogue is now ready, and will be sent upon application to anyone interested in that line of goods.

Jos. H. Seed, Nos. 21 and 23 Centre Street, New York, has issued a neatly illustrated catalogue of his patented specialties, which have now become known as household words in many a home and office in the United States. He has water filters of the highest description, four sizes "Matchless" self-lighting gas burners, gas stove stand and drop light, gas boiling stove, alcohol stove, gas tip cleaner, hat and coat hangers, pantaloon hangers, cigar cutters, paper bag holders, can openers, family soldering sets, screwdriver and wrench, sad iron, towel holders, automatic alarm bells, automatic knife, etc. Mr. Seed has a great reputation for devising articles that will lessen the labors of the busy man or woman.

Kraeuter & Co., No. 577 Eighteenth Avenue, Newark, N. J., have issued a catalogue, illustrating and describing their Ticket Punches in great variety and numerous shapes. The punch has become a standard article in the Hardware line, not only upon railroads, but in stores and other places. Any who wish information upon the subject, will do well to send for this publication, asking for their Catalogue No. 2.

Sargent & Co., New York and New Haven, have issued a monograph showing both by illustration and description the good points of the Eclipse check and door spring manufactured by them. They show the article itself, and its various methods of application, and also illustrate and describe the Eclipse dumb-waiter check. Prices in full are given.

Patterson, Gottfried & Hunter, Nos. 146–150 Centre Street, New York, are sending their friends a handsome little card, upon which is pasted a fac-simile of the Arcade file. Upon the card is the following legend: "This will do to scratch a match on, but if you want a real file, try the Arcade. It is the best."

The Wisconsin Refrigerator Co., Eau Claire, Wis., have issued a handsome illustrated catalogue and price list of their "Wisconsin Peerless" hardwood, dry-air household refrigerators, their ice chests, sideboard refrigerators, etc. The catalogue is handsomely printed and illustrated in colors.

Marion Cycle Co., Marion, Ind., and No. 2208 Michigan Avenue, Chicago, are sending their friends a little circular, which gives an illustration and full description of the Halliday-Temple Scorcher bicycle manufactured by them. The same will be sent upon application.

F. E. Myers & Brother, Ashland, Ohio, have issued a catalogue illustrating and describing their pumps and hay tools, and about anything that can be imagined in this line seems to be represented here. The catalogue will be sent upon application.

Overman Wheel Co., Chicopee Falls, Mass., have issued a handsome catalogue of the Victor bicycles, with heavy embossed covers, and printed in a most artistic manner. Their line of wheels and specialties is very fully described.

H. S. Robinson, No. 990 Water Street, Meadville, Pa., has issued a little catalogue describing his Bicycle specialties, among which is Robinson's Home trainer, automatic guards, cyclometer, toe clip, etc.

The Standard Lighting Co., Cleveland, Ohio, have issued a fine catalogue of their Vapor Stoves, printed and illustrated in colors in a very artistic manner. The cover is gray, with embossed silver letters.

First Prize, World's Fair, 1893.

It will be remembered that among the prominent winners of prizes at the World's Columbian Exposition, was the Gillette Clipping Machine Co., No. 201 East Twenty-third Street, New York. This was the result of a very fine display, coupled with an article of merit. We are informed that "over 2800 of these machines are in operation, giving universal satisfaction." The firm enjoys the distinction of making what is described as "an absolutely flexible shaft, manufacturing under three patents and building a great variety of power clipping machines, including steam, electric, hand power and their famous bicycle styles. It is a simple, rapid and perfect machine, and will pay for itself in a few days usage. No business pays half so well for the capital required to buy a machine. Some clippers make from $500 to $1500 a season; $3 is the price usually paid for horse clipping, and five to ten may be clipped per day with this machine. Send for catalogue and receive full particulars and valuable information on the subject." Among the new improvements to be ready January, 1895, may be mentioned a rotary knife and reversible rotary brushing machine.

Stoneware: Staples and Novelties.

In looking through the illustrated price list and catalogue issued by F. H. Weeks, Akron, Ohio, manufacturer of Staple Stoneware and Stoneware Novelties, one is struck by the extent and variety of articles that are made under these names. Among the articles he is offering the trade may be mentioned meat tubs, butter jars, jugs, churns, milk pans, water jars, stew pans, filters, fountains, batter pails, jardiniers, cuspidores, spittoons, egg beaters, etc. We are permitted to show several illustrations of some of the most successful of these specialties. In Fig. 1 is a shoulder jug, running from one-half a gallon to three gallons, and strong and serviceable in character. In Fig. 2 may be seen his white glazed bailed jug, old style, while the new, or XXX style, is shown in Fig. 3. "If you buy the XXX jug," says Mr. Weeks in description of the same, "the risk of breakage is one-half less than with common jugs, which is such a great item both in use and in shipping that this advantage alone will pay the difference in cost. It takes one-fifth less room in packing, and it weighs less, which saves money two ways for you. You can pour from it as nicely as from a pitcher, and that is worth the price of the jug. It is the jug

FIG. 1.

FIG. 2.

FIG. 3.

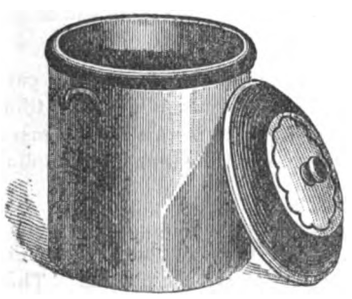

FIG. 4.

FIG. 5

the druggist, the grocer, the liquor dealer, the syrup manufacturer, the catsup and vinegar manufacturer all want. It is the jug the farmer has been looking after for the last one hundred years to carry to the field for a water jug. These jugs are glazed with white Bristol glaze, nearly as white as C. C. ware; are graceful in outline and finely finished, and we do not hesitate to say that we think them far superior to any jug on the market at anywhere near the price at which they are sold."

In Fig. 4 may be seen a butter jar, with cover. In sizes, this runs from one-fourth of a gallon to twelve gallons. A low butter jar is also made, running up to four gallons. Figs. 5, 6 and

FIG. 6.

FIG. 7.

7 are of glazed wares, being respectively a fancy glazed jardinier, with raised decorations and assorted colors; a fine glazed cuspidore, of assorted colors; and a fine bar-room spittoon, of stoneware glazed, and raised decorations. In speaking of these goods the maker says: "The wares which are here represented are, without question, far and away ahead of any others on the market that can be bought for the price at which we can and will sell you these. They are not painted, but glazed in solid colors, ranging from a light straw to black, with blues and greens included. The decorations are in raised work, and the glaze is as bright and smooth as the finest Majolica, Rockingham or yellow ware glazes. They are so far superior to the gaudily painted red ware on the market in appearance, utility and cleanliness, that there is no comparison between them."

Mr. Weeks is also manufacturer of the "Perfect" Egg Beater, an illustration of which may be seen upon page 10 of this issue. "One hand only," he says, "is used in operating the 'Perfect' Egg Beater, leaving the other hand free to introduce at will such other ingredients as are desired. The movements of the hand up and down will obtain a reverse rotation of the agitators of 500 to 1000 revolutions per minute, as willed by the operator. We will guarantee to beat the whites of two or three eggs to a froth that will stand alone in 30 seconds. The Perfect Egg Beater is as easily and quickly cleaned as a fork, and will accomplish the same result in one-twentieth of the time without fatigue. A Perfect Egg Beater is a constant source of pleasure and relief to the wife and mother, whose duties are never done."

Dealers who are interested in these goods can, at the cost of a postal card, obtain Mr. Weeks' price list and such other information as they may desire.

Bicycles in the Hardware Trade.

INCORPORATIONS, NEW FIRMS, AND WHEELS ADDED BY THOSE ALREADY EXISTING.

Columbus, Ohio.—The Indianapolis Bicycle Co. will open a branch store, and have contracted with Perry D. Gath to take the local management.

Cleveland, Ohio.—A movement is reported on foot, looking to persuading the Lozier Bicycle Co., recently burned out at Toledo, to rebuild in Cleveland. Akron, Ohio, is also offering inducements, and a Western Pennsylvania town is reported to have made an offer of $25,000 in cash and $25,000 in land as a bonus to the company for locating there. The Lozier Co., however, have issued a circular letter to the trade, which does not indicate any contemplated change of location. It appears that the damaged buildings are not in so bad a condition as was at first supposed, and within sixty days manufacturing will be resumed. In the meantime the company says it is in position to fill all orders.

Bristol, Conn.—The New Departure Bell Co. are putting on the market a new bicycle bell called the "Midget."

Kansas City, Mo.—Willard & Johnson, new bicycle store opened, and will handle the Syracuse and Rugby wheels.

Indianapolis, Ind.—The Hay & Willit Mfg. Co. has been incorporated, to succeed the bicycle firm of Hay & Willit.

Rochester, N. Y.—The Punnet Cycle Mfg. Co. has been incorporated, with a capital stock of $5000.

Hamburg, Pa.—The Wilhelm Bicycle Mfg. Co., of Reading, have completed the erection of their new bicycle factory and commenced operations the first week in December, and announce that sufficient orders have been booked to give steady employment to 200 men a month.

Perry, N. Y.—W. O. Davis, bicycles, etc., removed to Warsaw.

Kearney, Neb.—The Kearney Cycle Mfg. Co. will commence operations January 1st, giving employment to 50 men. This company has recently been incorporated by William A. Falloon, J. S. Morrison, J. Rohde, C. Lewis and W. B. Walker, with a capital stock of $50,000. Two grades of wheels will be manufactured, one of which will be called the "Kearney" and will be a roadster, and the other will be the "Kearney Special" and will be a racer. The city of Kearney have given the company power for manufacturing for five years free, and if the trade warrants, three other high grade wheels will be put on the market.

Orangeburg, S. C.—Brunson & Bros., who have opened new Hardware store, have taken up bicycles. Correspondence is invited with bicycle manufacturers looking to accepting agency.

Portland, Me.—The Climax Mfg. Co., incorporated with J. C. Wells, of Chatham, Mass., president, and E. G. Cane, of Chatham, Mass., treasurer. Will manufacture and deal in bicycles and bicycle fixtures; capital stock, $10,000.

The Sale of Their Crane Department.

A brief mention was made in HARDWARE last preceding of the sale by the Yale & Towne Mfg. Co., Stamford, Conn., and New York, of their Crane department to the Brown Hoisting & Conveying Co., Cleveland, Ohio. This change took place on December 1st. Mr. Towne, president of the Yale & Towne Mfg. Co., has briefly given the reasons for this step, in a letter to the trade, from which the following points of interest are taken: "Our engaging in the crane business originally, some seventeen or eighteen years ago, was an accident arising from the fact that we were already engaged in the manufacture of the Weston pulley blocks and other hand-hoisting machinery, and from personal perception, based in part on travel abroad, of the further fact that this country was far behind others in appreciation and use of cranes. Our works being located in Stamford, we naturally undertook the making of this new product here.

"At first the cranes called for were small, never exceeding ten tons capacity, and more frequently of five tons and under. A few were made for operation by power, but most of them were hand machines. The business soon began to grow, however, both in volume and in size of cranes called for. In 1881 we built a shop expressly for crane work, but the growth of the business was so rapid that in 1883 we were again compelled to build and on a much larger scale. At times even the later buildings provided for this work have been over-taxed, but, numerous competitors having entered the field, the growth of the business has naturally been distributed among them, with the effect of checking the exceptionally rapid rate of increase which previously obtained here. Nevertheless, the facilities of our crane department have become inadequate to the business, the growth of which, prior to the recent panic, had forced upon us the consideration of providing other and better facilities if the business was to be continued.

"In the meantime, however, the business had greatly changed. While a moderate demand still exists for hand and power cranes of the smaller sizes, by far the greater part of the business now consists in the building of electric traveling cranes and steam locomotive cranes of large dimensions and capacities, involving the use of large amounts of structural material and making the question of transportation a serious factor. The works of our chief competitors are located at Western points. We have had to obtain most of our heavy material from Pittsburg or other Western points, and the largest market for cranes now exists west of the Allegheny Mountains. Under these conditions, Stamford had obviously become an unfavorable point of manufacture for this work, and we were thus forced to consider the question of transferring it to a better location. A careful investigation was made, which satisfied us that Cleveland, Pittsburg or their vicinity offered the maximum advantages, and negotiations were begun last spring looking to the transfer and re-establishment of our crane business at one of these points. In the course of these negotiations we were brought into communication with the Brown Hoisting & Conveying Machine Co., already having extensive works in Cleveland, admirably suited to crane building, and already engaged in work of closely similar character. The outcome of the discussion thus started was a proposition from that company to purchase our crane business."

Mr. Towne then cites the rapid increase of the volume of their business in its older and principal lines, as another reason for the sale, and adds: "The transfer of our crane business elsewhere solves all of these difficulties, and enables us at once to make the needed extension of our Hardware departments in the best possible manner." He also says: "More recently, in 1891, we added a new department, devoted exclusively to the manufacture of cabinet locks in almost endless variety, and in 1894 we acquired possession of the Branford Lock Works, where we now manufacture a complete line of locks and builders' Hardware of popular and less expensive character than our Stamford product. The trade catalogue of our Hardware products is now comprised in four volumes, aggregating 1260 pages, to which additions are constantly being made. These facts are sufficient both to explain and to justify our decision hereafter to concentrate our energies and growth upon builders' Hardware and allied products. The sale of our crane business, which has just been effected, is merely one step, although an important one, in the consummation of the plans and policy upon which we decided many months ago, and to the carrying out of which we are definitely committed.

"The sale of the crane business includes crane work of all kinds, crabs, winches and tramrails. Our long established business in chain pulley blocks, including Weston's differential block, Weston's triplex spur-gear block, and our new duplex screw block, as well as our line of double-lift hoists, will be continued by us as heretofore."

Banner Oil Heater.

The Plume & Atwood Mfg. Co., No. 18 Murray Street, New York, have scored so many successes that when they pronounce their Banner Oil Heater "the greatest success of the season," they mean more than so many empty words. They certainly have met with great success in its presentation to the trade. The Heater, an illustration of which is here shown, is described as simple, novel and practical, and "will burn from ten to twelve hours, and heat comfortably a room fifteen to twenty feet square; with no smoke, no odor, and perfect combustion." The detailed points of description are as follows: "The oil fount is brass, handsomely embossed and highly nickeled. It holds one gallon of oil. As each fount is tested under steam pressure before leaving factory, there is no danger of leaking. The fount frame is artistically made of wrought iron, making a solid base for the stove. The burner is the best made, and only one with inside feeder wick, allowing all the oil to be consumed. The indicator shows at all times how much oil there is in fount. The flame is regulated with our ratchet wick movement, which allows the wick to be raised or lowered with nicety and exactness. The drum has a sliding door for lighting. The round openings allow the cold air to be drawn into the hot air chamber, which becomes heated and is thrown off with the radiating force, thus making a triple draft."

NO. 971 BANNER OIL STOVE. HEIGHT, 26 INCHES.

The Bell Hanger.

Bell's Wire Eave Trough Hanger, manufactured by Jno. W. Bell & Co., Mercer, Pa., has been on the market for some eight or ten years, and has come to be recognized as a leading first-class, low priced hanger with the trade generally. They are sold by the jobbing trade throughout the Eastern and Middle States, and west to Missouri River points, and south from "Atlanta to the sea." They are manufactured in nine different sizes, and to suit the various shapes and sizes of trough. The manufacturers will send free, on application, a sample of any desired size, together with price list and a list of jobbers who sell them.

We have received from the American Artisan press, No. 61 Dearborn Street Chicago, a copy of the "Furnace Work Manual," from the pen of Sidney P. Johnson, which is an exposition of furnace work in all its branches, and a practical compendium upon furnace work; contains near three hundred pages, thoroughly illustrated, and seems to cover the field described, in a most able manner.

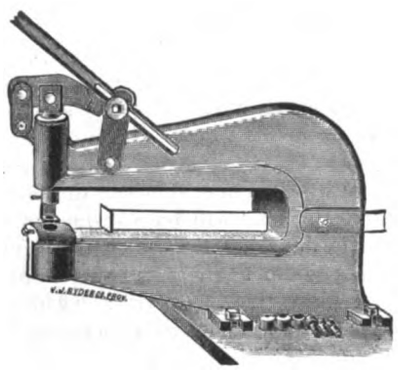
New Goods in the Market.

If you have anything NEW, let the world know it by illustrating it in these columns.

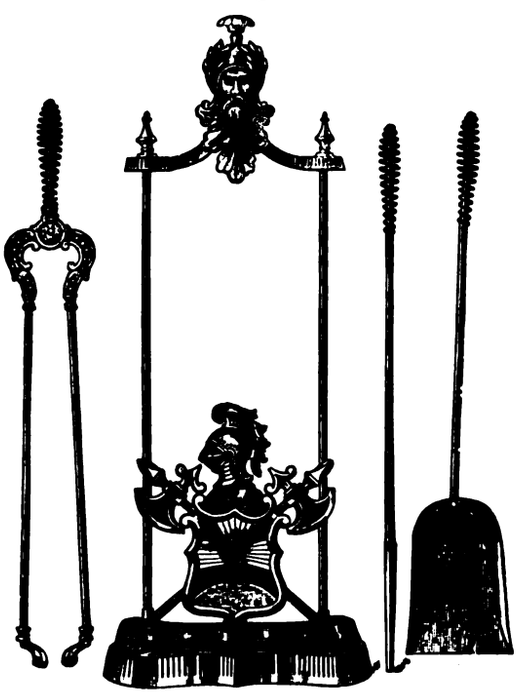


NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

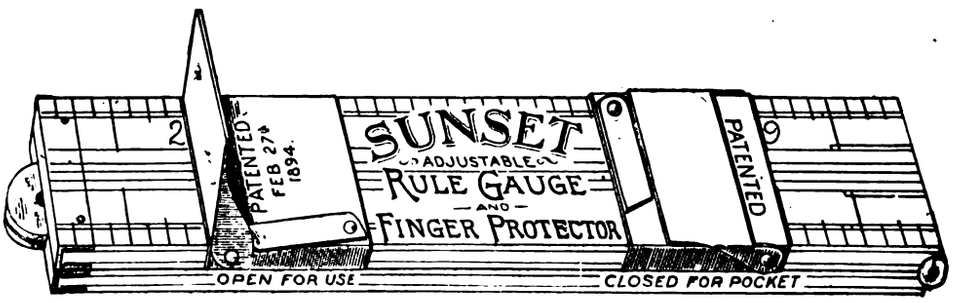
No. 2 Foot Press.



The Foot Press here shown is being manufactured by R. M. Clough, Tolland, Conn. It is intended to do heavy punching

without bolt, and has capacity of punching half inch holes in one-eighth iron, eighteen inches from edge, or to centre of thirty-six inch square sheet, and will take in pipe. This punch can be fitted to work by foot lever or by hand lever, or both. It can also be run by power. The punches and dies are round, "thereby costing less than any other shape." Punch shanks are 23-32 inch in diameter; Dies are 1½ inches in diameter by one inch in length. This punch can be fitted to punch inch holes. The dies and punches are self-setting, and can be easily changed from one size to another. It has gauges for the edge of sheet and also gauges for distance of holes apart, adjustable from one inch to twelve inches. Each machine is furnished with foot lever, springs, and everything complete to start up, and is especially designed for heavy punching.

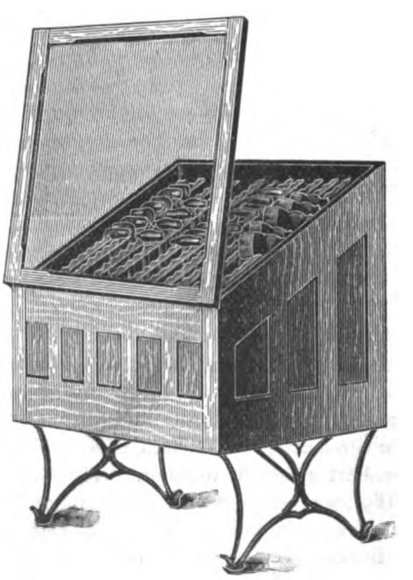
"Alaska" Fire Set.



The Troy Nickel Works, Troy, N. Y., are offering the trade the handsome "Alaska" Fire Set here shown. It comprises tongs, poker and shovel, with a stand for the same. These articles are described—like all goods of this line—as "always

cold." They are finely nickel-plated, and are an ornament as well as a useful adjunct to any room in which they may be placed. The manufacturers will be pleased to send prices, etc., upon application.

Sunset Rule Gauge.



The Sunset Rule Gauge here shown is manufactured by J. J. McManus, Nos. 751-753 Market Street, San Francisco, Cal. It is made of brass, of the size and shape here shown, and is described as "applicable to any ordinary two foot pocket rule; easily adjusted; is to be carried on the rule in the pocket when not in use, and as a finger protector, when on the rule, it protects the finger from splinters or a rough surface when scribing a line parallel to the edge. As an adjustable gauge it can be placed at any required position on the rule simply by sliding. It may also be used as a marking gauge, and with a pencil or scratch awl, all work usually done with a marking gauge, mortise gauge or panel gauge can be performed; can also be set in

an instant, as a hinge gauge for marking the cuts on doors and casings in fitting butts or hinges; may be used as a compass or divider by sliding the gauge so that the rivet on either side of the gauge from the end of the rule to the measurement of the radius of the circle gives the centre or revolving point, a pencil or awl giving the marking point."

Hammer and Hatchet Case.

F. A. Herrick & Co., No. 228 Second Street, Jackson, Mich., are meeting with no small degree of success in the introduction of the Hammer and Hatchet Case here shown. It holds 120 of these articles, and the claims advanced for it by the makers are: "The attractive appearance. Every article in the case is seen at a glance. Being enclosed in a case, they are kept free from rust. Any article in the case can be removed by the salesman only, as the glass cover is hinged on the front and lifts up from the back, thereby preventing the customer from handling only such articles as are shown him. The case is finished on the back the same as on the front so that it can be used in any part of the store desired. We fit the case up in three ways, viz.: No. 1, which holds 66 hammers of various kinds and sizes, and 54 hatchets and hand axes of various kinds and sizes. No. 2, which holds 164 hammers only of various kinds and sizes. No. 3, which holds 90 hatchets and hand axes of various kinds and

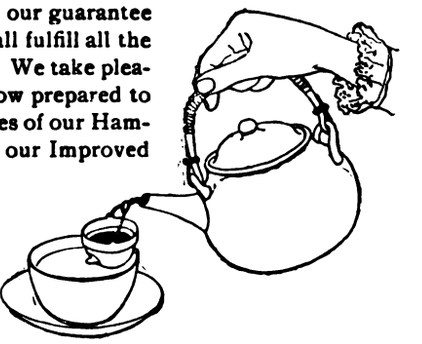
sizes. The size of Nos. 1, 2 and 3 cases are the same, viz.: 36 inches long, 26 inches wide, 47 inches high on the back and 32 inches high in front. The back of the case has a drop door hung with spring hinges so the lower part can be used for surplus stock. The glass cover has a supporter to hold it up when showing goods. The case is made of oak and nicely finished,

Digitized by Google

The brackets are malleable iron and japanned. The legs or standards are cast iron and japanned also. The case, when filled with tools and placed in any store, attracts attention at once and will increase sales. List $27. Discount."

Mossberg Wrench.

The Wrench here shown is being placed upon the market by the Mossberg Wrench Co., Attleboro, Mass. They say that it

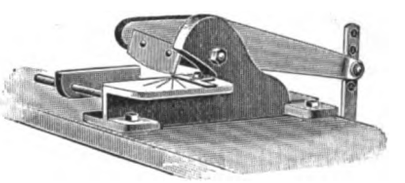


"has many good qualities that commend themselves to the user, chiefly among which is its strength; is made of the very best material that can be obtained for the purpose, and is well tempered. The handle is made out of drop forged steel; the two sliding bars or shank is made out of drawn steel wire. These steel rods are screwed into the outside jaw and riveted over. The opposite ends of these rods are cut down and threaded to receive the nut."

Automatic Ejector Gun.

The Lefever Arms Co., Syracuse, N. Y., have commenced the manufacture of the Automatic Ejector Gun here shown. In describing it, and advancing its claims upon the sporting world, they say: "We have decided to place upon the market the medium-priced Lefever Hammerless Guns, fitted with Automatic Shell Ejector. The high prices heretofore demanded for ejector guns have made them a luxury in which few could indulge. Sportsmen have been anxiously looking forward to the time when a first-class and reliable ejector gun would be within the limits of their pocketbook. It has always been our pride and aim to anticipate the desires and fulfill the requirements of the sportsmen of America, and to keep a step in advance of the times in mechanical improvements as applied to shotguns. We are gratified to be able to say to the public we can now furnish Lefever Guns fitted with Automatic Shell Ejectors at prices within the reach of every sportsman. In offering to sportsmen our Improved Ejector Movement, we are offering a device that has been subjected to the severest test, and pronounced by hundreds of sportsmen a success in every respect. It consists of only two pieces; one is a hook pivoted in the hammer; the other is a lever pivoted in the frame. The simplicity of the construction of the movement is such that it does not in any way weaken the mechanism of our gun, or interfere with any of its compensating features. The ejector

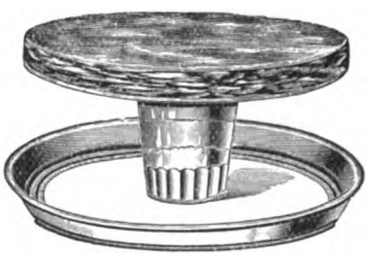
parts can be removed by anyone, without a possibility of a mistake in replacing them. There are no extra movements to make or increased force to be used in manipulating the gun. All that is required of the operator is to handle the gun just as he would our gun without the ejector. Only the discharged shell is ejected and it is thrown with force a good distance. The hammers always cock before the shell is ejected. We believe we are justified in saying our Improved Ejector Gun, in its present form, is the most simple, durable and effective ever known. Tens of thousands of Lefever guns in the hands of sportsmen in the United States and territories have seen years of hard service, and are to-day giving entire satisfaction. Sustained by such a good record, we are sure sportsmen are ready to receive in good faith our guarantee that our Ejector Gun shall fulfill all the pledges we make for it. We take pleasure in saying we are now prepared to accept orders for all grades of our Hammerless Guns fitted with our Improved Automatic Ejector."



Ideal Tea and Coffee Strainer.

The Ideal Strainer Co., No. 208 State St., Boston, Mass., are placing upon the market the Ideal Tea and Coffee Strainer here shown. They describe it as substantially made, beautifully finished in nickel and silver plate; swings freely in the usual manner, and at the same time prevents the drops from falling upon the cloth; can be emptied of its contents before leaving the cup, and consequently there is no liquid remaining in the body of the Strainer to grow cold or become spilled on the cloth; is easily cleaned, as there are no sharp angles or corners to hold the sediment; is attached to the spout in the old-fashioned way, without springs, screws, etc., and will not scratch or mar the finest polished silver tea or coffee pot; works well for tea or coffee. Further details and prices will be furnished on application.

Clough's Foot Lever Shear.

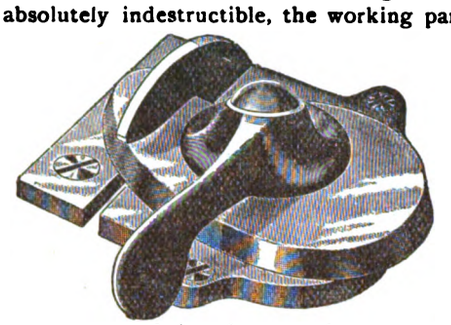


R. M. Clough, Tolland, Conn., is placing upon the market Clough's Foot-Lever Shear here shown. This Shear sets on a bench, and is worked by foot, thereby giving the workman

the use of both hands to guide his work. "It will shear one-eighth inch iron, has four inch blade, and cuts six inches. Has a gauge for parallel cutting and one for squaring and angular cutting. This makes a very handy tool for most shops, where ordinary shearing is done. The connecting bar in rear of bench has holes to suit benches of different heights." Prices, etc., will be furnished upon application.

Improved Perfection Tins.

Sidney Shepard & Co,, Buffalo, N. Y., have lately improved their Perfection Tins by the addition of a patented groove, which, they say, "overcomes the only objection that was ever made to them, viz.: that they might leak batter or juice of pies." They add: "The groove is on the inside of the rim of the tin, into which the loose bottom is sprung when in use, thereby rendering leak from accident or warp impossible, and



making them absolutely equal to a solid tin, while retaining all the advantages of the loose, removable bottom." The illustration shows a cake removed from a Perfection Tin. It is supported on the removable bottom, from which it may be easily slid off, while the rim falls to the table.

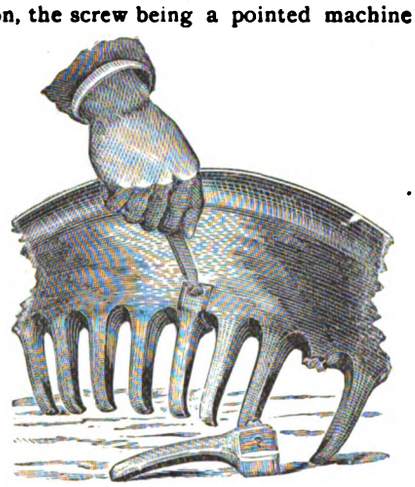
A New Sash Lock.



The Gardner Sash Balance Co., Chicago, Ill., are introducing a new Sash Lock which they describe as "a new departure in that line." It consists in having the latch and keeper stamped from cold rolled steel, "thus making the two essential parts absolutely indestructible, the working parts of the

lock being so constructed that there can be no wear out to it." The accompanying cut illustrates the appearance of the lock, which shows it to be neat, compact and strong. "There are no delicate parts to get out of order, there being but three pieces in its construction—the handle, latch and base plate. The lock is manufactured in all the styles and finishes of general Hardware." Descriptive price list will be sent by addressing the Gardner Sash Balance Co. They add: "Our prices as low as any first-class lock."

Adjustable Stove Tooth.

Harkins & Willis, Ann Arbor, Mich., are manufacturing a new Stove Tooth for old fire bowls, the method of attaching which is shown in the accompanying illustration. The tooth is of cast iron, the screw being a pointed machine screw, the

point entering the hole or point made by a centre punch. It is made in four sizes, and, it is claimed, will fit any bowl. The makers say that the new article is meeting with a great deal of success.

Fox Patent All-Steel Sash Pulleys.

The all-steel Sash Pulleys here shown are being placed upon the market by the Fox Machine Co., No. 135 North Front Street, Grand Rapids, Mich. In Fig. 1 we show the improved corrugated side style "C" Steel Pulley, and in Fig. 2 the man-

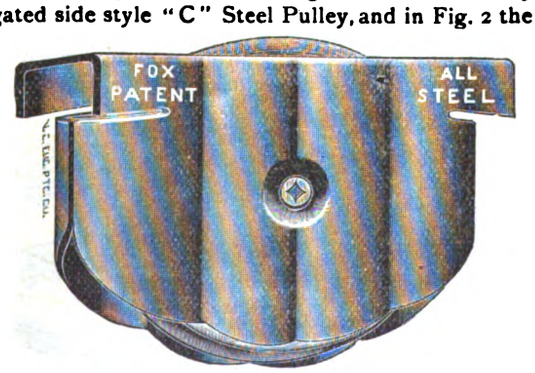


FIG. 1.

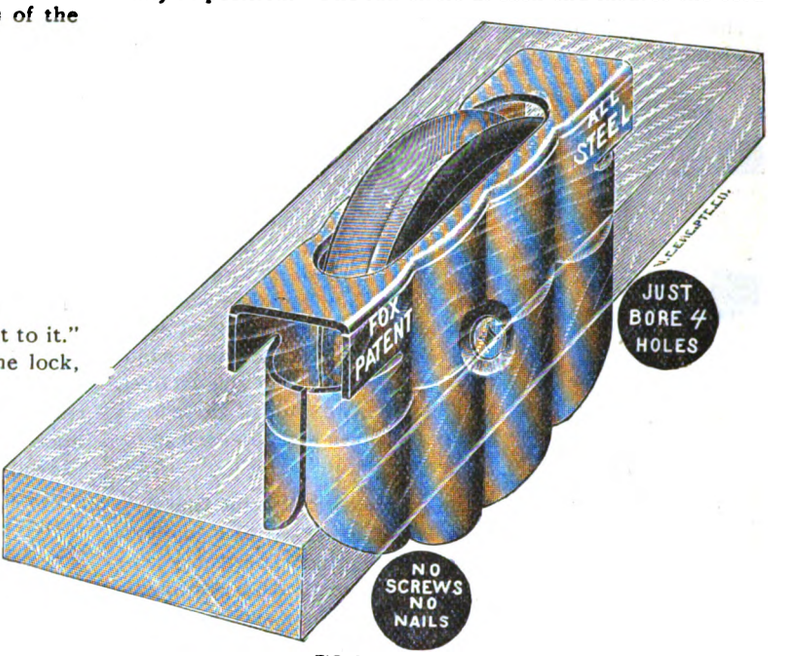
ner in which it is applied. The makers describe these goods as "light, strong and admitting of rapid insertion in position; the round end of the shoulder gives the pulley a firm support in the jamb, enabling the pulley to effectually resist the continual strain of the weight; while there is no splitting of the jambs when inserting the pulley, as the shoulder fits snugly in the mortise and can be pushed down as far as the projections, which, when driven down, form a staple, holding the shoulder firmly in position. The full circle at each end insures the cord



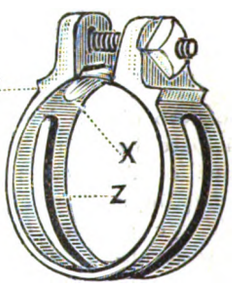


FIG. 2.

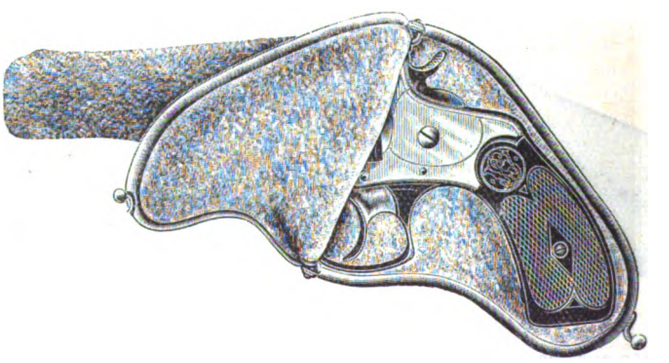
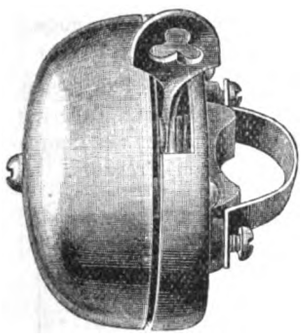
always remaining on the pulley. One push with a four hole bit cuts the mortise, and that one blow and a few taps on the side will force the pulley into position, and no nails or screws are required."

Yerdon's Double Hose Band.



William Yerdon, Fort Plain, N. Y., is successfully placing upon the market the improved Double Hose Band here shown. It is made of a mixture of copper, tin and aluminum, and in describing the same the maker says: "The shoulders which receive the adjuster are prominent features, and it is wonderful the ease with which the bands can be applied with the use of the adjuster, and there is no limit to the tightness to which the bands can be drawn about the hose. The utmost care is taken in the mixture of the metal and their construction is faultless, so that I warrant every band sent out."

The illustration shows the band ready for attachment to the hose. Samples and discounts will be furnished upon application to the manufacturer.



Buckskin Revolver Pocket.

Hartley & Graham, Nos. 313-315 Broadway, New York, are placing upon the market the buckskin chamois lined revolver pocket here shown. It has a nickeled brass rim, firmly closed over the edge of the leather, hinged at the centre, with a ball friction catch at the end, "which is quickly unfastened by a

dexterous twist of the thumb and finger, or can be left unclasped when quick use of the revolver is anticipated. This pocket is flexible and compact in form and is fitted to the lines of the pistol; is not cumbersome and keeps the firearm clean

and free from dust and dirt, as well as rust from perspiration." They are made in two sizes and several lengths of barrels, as follows: No. 1, 0.32 calibre, 3 and 3½ inch barrel; No. 2, 0.38 calibre, 3¼, 4 and 5 inch barrel. The pockets are adapted to Smith & Wesson, Forehand, Harrington & Richardson, Iver Johnson and like automatic revolvers.

An Improved Bell.

The Hardware Specialty Co., Nos. 61 and 63 Mulberry Street, Newark, N. J., are placing upon the market a line of pure bell-metal gongs. They explain that all these bells are put together with screws, and are easily taken apart and repaired. We show herewith their improved Bell No. 50, of which the makers say: "Our object in making this bell is to give he trade a small rotary hammer bell that will be strong and durable, and at the same time compact and serviceable. As the pioneer makers of rotary bells we have always kept up the standard of our goods, and guarantee every bell that we make. We also have a flexible bridge to support the gong, so that when the gong is hit or comes in contact with any hard substance, the bridge gives, and gong flies back to its original position without breaking."

Forg's Tool Racks.

P. Forg, manufacturer of cabinet and builders' Hardware, Somerville, Mass., is manufacturing the Tool Racks here shown. In Fig. 1 is shown the Rack itself; in Fig. 2 several single holders. These are made of sheet steel, and are nickel-

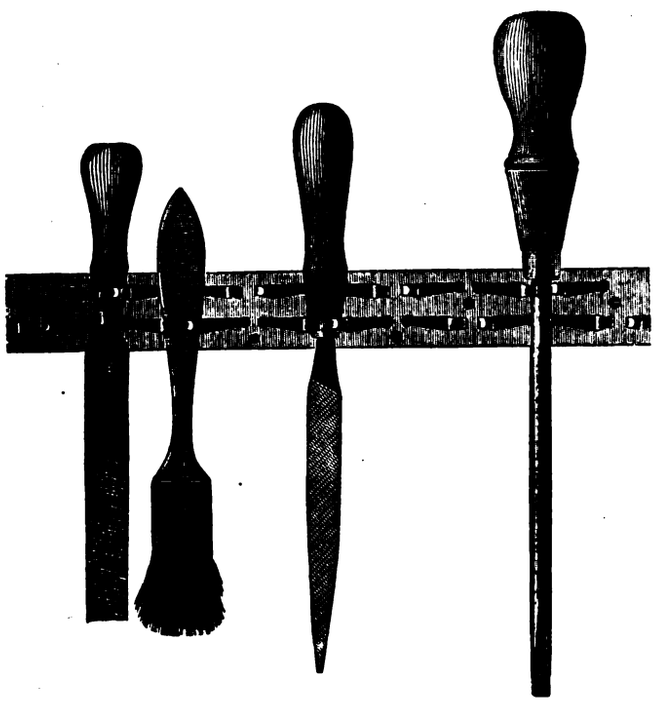


FIG. 1.

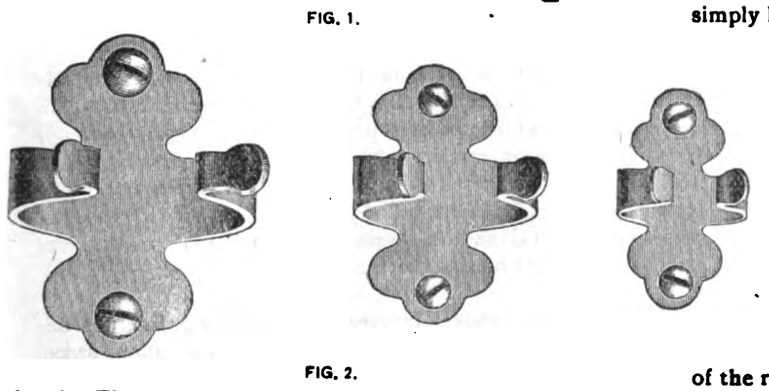

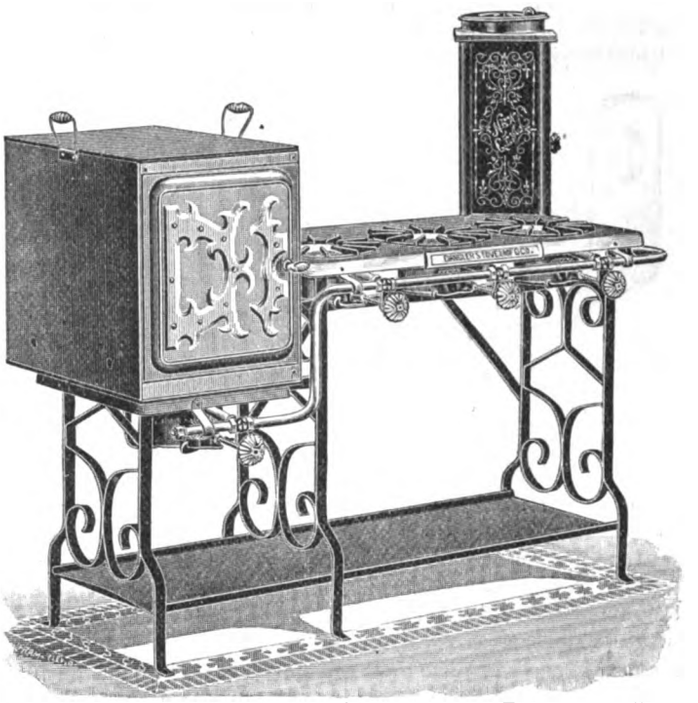

FIG. 2.

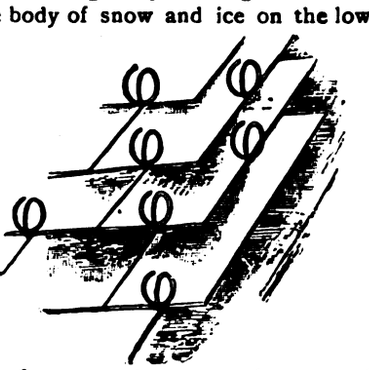
plated. They are made in lengths of two feet, with clasps of three sizes, viz.: ⅝-inch, ⅞-inch and 1⅛-inch, and are described as "suitable for hanging up files, tools, etc., in factories, workshops, closets, tool chests, etc." Mr. Forg will be pleased to send fuller descriptions and prices upon application.

The Dangler "New Gem."

In this connection we show in the "New Gem" a stove which the makers, the Dangler Stove & Mfg. Co., Cleveland, Ohio, describe as "a stove for the people; a stove for the

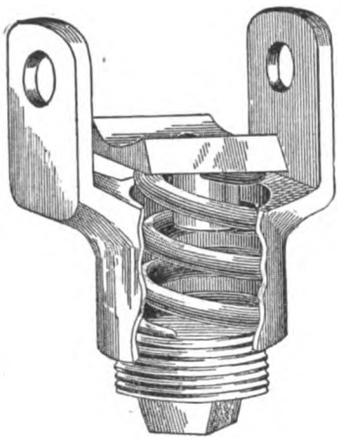


times." In further description of it they say: "This stove will prove a 'Gem' indeed, in every house that may be fortunate enough to secure one. The burner has the same flame as the Process and Delight, with the same heating power, and will do the same amount of cooking, baking, roasting, ironing, etc., while the first cost of the stove is only one-third as much as either the Process or Delight, and is much more economical, and on account of the price, capacity, convenient size and power, will be the most popular stove in the market. It is made with our celebrated Surprise and Delight Removable Tank, which is neither lay down nor elevated, but regarded as the most convenient, reliable and absolutely safe tank ever placed on a vapor stove. This stove can only be made by us, as we hold fundamental patents on the burner and tank, so that whoever secures the sale will have no competition, and hence clearly to your interest to see it before placing your orders for the coming season." They give sizes and prices, as follows:

No. 415, 3 Burner, and Step...	$12 00.	No. 412, 2 Burner, high.....	$7.00
No 414, 2 Burner, and Step...	10.00.	No. 433, 3 Burner, low.....	8.00
No. 413, 3 Burner, high	9.00	No. 432, 2 Burner, low.....	6.00

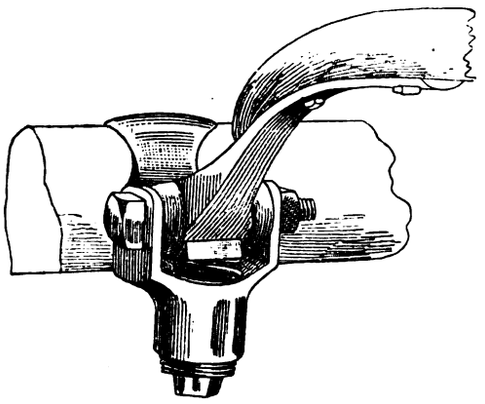
Subject to the Regular Association Discounts and Terms.

The Folsom Snow Guard.



The patent Folsom Snow Guard is being placed upon the market by the Folsom Snow Guard Co., No. 33 Lincoln Street, Boston. These guards are designed for use upon either slate, shingle or tile roofs, and can be easily applied upon old or new roofs. They are described as "simple in construction and durable," and as "fast taking the place of guard rails, as a rail simply holds a large body of snow and ice on the lower edge

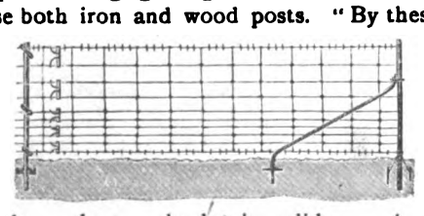
of the roof, which is far more dangerous than no rail at all. The Folsom Guard holds the snow in an even surface all over the roof until it gradually melts away, both from the upper and under side, and prevents snow slides. Besides being used on all the public school buildings in Boston, they are used largely in other localities, and wherever used have given perfect satis-



Digitized by Google

faction." In the accompanying illustration is seen a section of roof which shows the manner of applying these guards. In added description the makers say: "One new model will protect on a ¼ pitch roof, 300 square feet; on ⅓ pitch roof, 200 square feet; on ½ pitch roof, 100 square feet; on Gothic pitch roof, 50 square feet, and we recommend their use distributed over the whole area of a roof to obtain the best results; though where expense is a consideration, or in sections where snow-falls are light, five courses of slate at the eaves with a new model guard in each joint are more efficient than a guard rail, and for a fraction of the expense."

"Haskell" Anti-Rattler.



The "Haskell" Anti-Rattler for carriages and wagons, is being placed upon the market by the W. A. South Co., Salem, Mass. In describing it the company say that it is "not a cheap rubber or spring, but a perfect Anti-Rattler that will wear years, positively preventing rattle. That is all we guarantee it to do. The inside measure of the 'Haskell' will fit the outside measure of your shaft clip. We make them in eight carriage and eight wagon sizes. If it is worth while to fit your carriage or wagon with a set of rubbers or springs at a cost of 40 or 50 cents every three or four months,

we shall be glad to send you by mail prepaid, a pair of 'Haskell' anti-rattlers for 75 cents, which we guarantee to wear not three or four months, but four or five years."

Mast Woven Wire Fence.

The Northwestern Barb Wire Co., Sterling, Ill., are placing upon the market the Woven Wire Fence here shown. In describing it they say: "All our farm fences, whatever the number of wires, are of single galvanized wires. Top and bottom, No. 9; next to each No. 10; balance, No. 11; crossed with No. 14, one foot apart. All smooth wires, but will furnish barb wire for top or bottom or both, at the same price It is often desirable to have a barb wire on the top to prevent trespassing and stock reaching over and crowding the fence, and on the bottom to prevent hogs getting under." For method of bracing they use both iron and wood posts. "By these methods

of bracing, the ends are absolutely solid, are simple in construction and the most effective device to overcome the end strain the fence is subjected to. The post is a flat bar of iron driven in the ground edgewise against the wires, with an anchor of sufficient size attached below the surface to keep the post firmly in place. The wires are fastened with a simple clamp, which does not require a notch or hole in the post to secure the wires where it will weaken it, thereby retaining the full strength of the bar. The posts in farm fences are 22 feet apart." The company further say: "To introduce our fence we will deliver to any railroad town in the States west of Indiana, freight charges prepaid, a ten wire fence, 50 inches high, galvanized, at 60 cents per rod. Twelve wire fence, 58 inches high, at 65 cents per rod. Terms cash with order. Write for circulars giving full description of the Mast Fence."

Drawn-Steel Bottom Can for Ice Cream Freezers.

Under the heading of "The Newest Idea in Ice Cream Freezers," the North Bros. Mfg. Co., Philadelphia, describe their Drawn-Steel Bottom Cans (Fig. 1), which they are manufacturing in connection with their Ice Cream Freezers. In describing the same they say that it "cannot fall out or be displaced, cannot break and does not leak. It is far more secure and better tinned, and not liable to injury or leaks, as bottoms made of castings or tin-plate. This new bottom is made of heavy sheet steel, drawn into shape by powerful presses. The lower edge of body or side of can is spun out to form a shoulder against which the drawn-steel bottom rests. The lower edge of body of can is then spun over the lower edge of bottom, as shown in the cut, by special patented machinery. All cans of our freezers

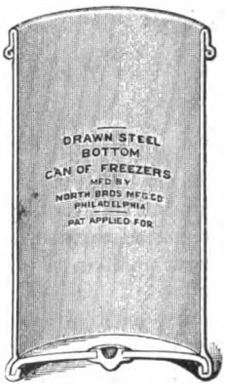


FIG. 1.

are made of the finest quality bright charcoal tin-plate of heavy gauge. They are folded and wired at top, with lock seam on side, soldered both inside and outside." They also call especial attention to their Electric-Welded Wire Hoops (Fig. 2), which are made of galvanized wire, welded by electricity. They are described as "double the strength of the old-style riveted flat hoops; are imbedded by a patented process in grooves in the pail, and clamp the staves so tightly that it is impossible for them to fall off, nor can they be gotton off the pail without the use of force sufficient to ruin the hoops or pail. In pails with flat hoops, the hoops frequently drop off; the popular idea that the wood shrinks, allowing hoops to fall off, is a mistaken one. As a matter of fact, the wood does not shrink. Timber that has been cut up and properly dried, cannot shrink any further, and pails made from such timber cannot shrink. What actually takes place is, that when the pail becomes damp, the wood swells and stretches the hoops; when the pail dries out it comes back to its original size, but the hoops cannot shrink and therefore fall off. In these electric-welded wire hoop pails the extra strength of the wire hoop prevents it stretching; in addition, the wire hoop being round, only a small portion comes in contact with the wood; the result is that when the pail swells from dampness, the wire hoop compresses the wood rather than

FIG. 2.

stretch, keeps its original size, and being imbedded in a groove in the pail, cannot fall out when the pail dries out. The flat hoop presents so much surface to the pail that it cannot compress the wood, and must stretch when the pail swells from dampness, and drop off when it dries out."

A knife is being brought out in England which has a nickel-plated handle. On this handle is stamped in remarkably plain letters the rates for letter and parcel postage, book and foreign postage, money orders, with also the rates for telegrams. The United States is a large country, but it would seem that there could be a special adaptation of this idea to the various localities and sections, and in some larger metropolitan districts time-tables could be used with advantage.

The Champion shovel factory in Phillipsburg, Pa., was destroyed by fire some days since. The loss was about $7000, with an insurance of $3000.

J. M. Russell, representing the Hughes Shear Co., Clyde, Ohio, has been in the city, advancing the interests of his company.

Illustrated Bicycle Novelties.

MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

Bridgeport Cyclometers.

The Bridgeport Cyclometers here shown are being supplied to the trade with great success by the Bridgeport Gun Implement Co., No. 313½ Broadway, New York. In Fig. 1 we show

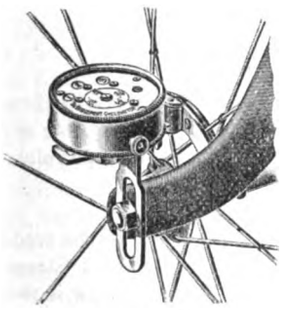

FIG. 1.—MODEL A.

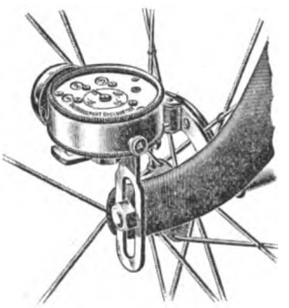

FIG. 2.—MODEL B.

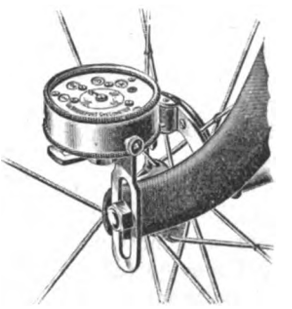

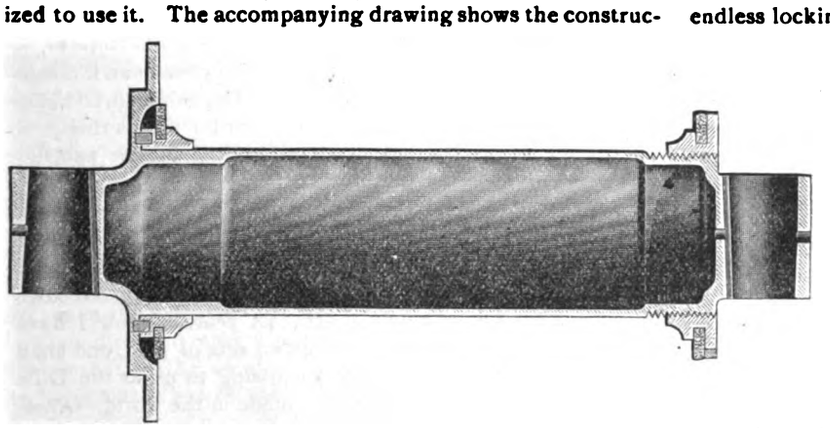

FIG. 3.—MODEL C.

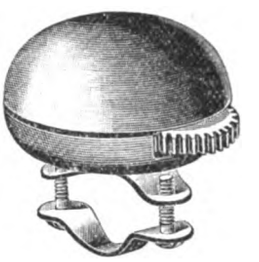
their Model A; in Fig. 2 Model B, and in Fig. 3 Model C. In description of the same they say: "Model A registers one thousand miles and repeats, and can be set back to zero at will. Nickel finish, with white celluloid face plate, and enlarged figures on dials. Improved brackets and dogs. For 28 and 30-inch wheels. Weight, 6 ounces. Model B, same as Model A, with bell, which rings at every mile. Registers one thousand miles and repeats, or can be set back to zero at will. Indispensable to road riders who wish to know how fast they can travel per mile. For 28 and 30-inch wheels. Weight, 7 ounces. Model C registers ten thousand miles accurately and repeats. Recommended especially to wheelmen who take long trips, or enter for club mileage records; and also to those who do not care to set the cyclometer back to zero. This cyclometer repeats at the end of ten thousand miles. For 28 and 30-inch wheels. Weight, 6¼ ounces." The company further announce "reduced prices" upon these goods, and further say: "All Bridgeport Cyclometers guaranteed to be accurate, waterproof and noiseless. Discounts on application. An extra advance sheet with our new bicycle sundries for 1895 will be ready in a few days. Electrotypes free."

Victor Crank Axle and Bearing.

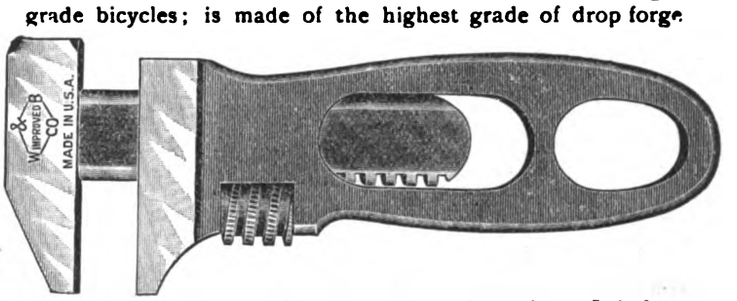


The Overman Wheel Co., Chicopee Falls, Mass., are making a special feature of their 1895 models in the new crank axle and bearing, here shown. They say: "The crank hanger is one of the most vital points in the construction of a bicycle. By repeated experiments and thorough mechanical tests, we have devised a hanger that is at once, safe, simple and strong. It is found on Victor Bicycles only, and no others are authorized to use it. The accompanying drawing shows the construc-

tion. The advantages are apparent at first sight. The axle is in one piece instead of two, both the crank sockets being a part of the axle, so that there is nothing to work loose or give way. The axle is made hollow, and its material so distributed as best to resist the strains put upon it by the rider. Increased lightness and strength are both obtained in this new form. The large bearings run easier, with less torsional strain, and at the same time give great stability to this important feature of the bicycle. This part of the machine is further improved by making the sprocket hub a part of the crank axle, and doing away with the taper pin, or crank key. This new construction is more simple, much safer, and much less liable to give the rider annoyance from any tendency to work loose."

The New Departure "Midget."

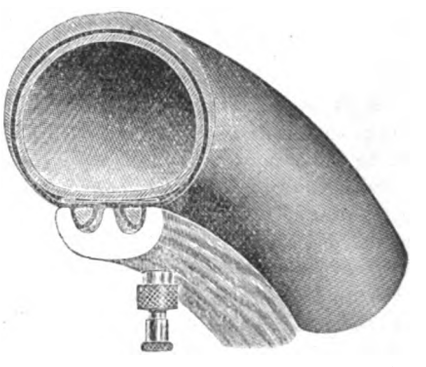
"In making a new bell for the market," say the makers of this article, "we study as closely as possible the wants of the consumer, viz.: The average bicycle rider wants a small size, light weight, medium priced Bicycle Bell—one with a clear



THE NEW DEPARTURE "MIDGET."

ring and easy to operate; and in the Midget they have it. It is our new bell for 1895, and is the neatest bell ever made. Size, 1¾ inches; weight, 3 ounces; single, double, or continuous ring. List price, $1.00." It ismade by the New Departure Bell Co., Bristol, Conn; John H. Graham & Co., N.Y. agents.

An Improved Bicycle Wrench.

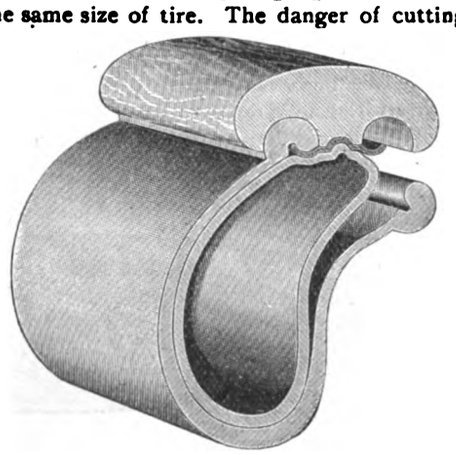


The improved Bicycle Wrench here shown is offered to the trade by the Whitman & Barnes Mfg. Co., No. 111 Chambers Street, New York. They describe it as "intended for high-grade bicycles; is made of the highest grade of drop forge

steel; is very strong, and has a very quick motion. It is four inches long and weighs six ounces, and the jaws will open 1½ inches. It is very short and compact, and can be carried in the vest pocket or in a bicycle tool bag."

The L. C. Smith Tire.

We are permitted to show in this connection a section of the tire manufactured by the L. C. Smith Tire Co., Syracuse, N. Y. It is described as "a quick repair tire, and is very resilient; the inner tube being located entirely above the rim on a flat, endless locking band, which securely locks the shoe or outer

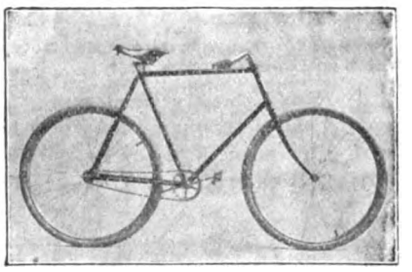


cover in position, and protects the rim from coming in contact with obstructions. The tire is attached by inserting the bead on one side of the shoe in the groove around the whole circumference of the rim; then place the locking band inside the shoe. The valve is put through the cot hole in band and rim, distributing the tube evenly around the band, using care

Digitized by Google

not to twist it; then the tube is slightly inflated. This is done to insure the tube from getting under the band. Commencing at the valve, the band is raised, and the bead dropped into the groove for about six inches each side of the valve; then a start is made at a point directly opposite the valve, and the band shifted over so that the bead will drop into the groove around the whole circumference of the rim, before locking any portion in, except that already locked at the valve; then a start is made near the valve, and the band rolled over, passing the hands around the periphery of the rim to see that the band is in the centre of the rim."

The Tillinghast Tire.



The Tillinghast Mfg. Co., Providence, R. I., are having great success with the Tillinghast Tire here shown. This tire was invented by P. W. Tillinghast, who designed it "to overcome defects in detachable tires, which were liable to be injured by the cutting or breaking of the bead at the edges of the rim, and the outward hooking or dressing of the bead or tire edge required a wider rim; when made of wood the rim gave the wheel a heavy and clumsy look. Besides, the tires were held in place by the pressure of inflation. The improvements," say the makers, "have secured to the rim edge an almost complete relief from the outward pressure of inflation by the inwardly turned beaded edges of the tire hooking under a metal band. This allows of the use of a very light and narrow wood rim, and results in the saving in weight of nearly three pounds per pair, including rims. Another advantage is in having all of the air space above the rim, giving a greater cushioning action for the same size of tire. The danger of cutting on the

rim edges is said to be removed by the peculiar construction of the beaded tire edges, the outer surface of which is rounded following the arc of a true circle. This curved shape extends above the rim when the beads are inserted, and as the beads can only move in curved pathways, it follows that the flexible side wall of the tire, or even the bead, can never come in contact with the extreme edges of the rim." The device consists of the usual parts, viz: Rim, air tube, and sheath, or case. The improvement makes it possible to get at the inner tube, which contains the air, and readily repair any puncture that may be made in the tube. The object of this invention is by the makers, briefly stated thus: "To construct a tire that can be easily removed and replaced by an unskilled person, without special tools and appliances, and without disturbing any part of the wheel rim. This object is attained by forming recesses in the edges of the rim, with contracted openings for the reception of the beaded edges of the sheath or case, the beaded edges being introduced into the recesses by turning the bead in a curved pathway through the contracted openings. In this manner a part only of the molded bead is presented to the opening at one time, and the turning of the bead during its insertion will swing it into place under the metal band, as if pivoted to the edge. A greater part being then presented to the opening prevents its withdrawal, except by a reversal of the movements of insertion. After the sheath is in place and the inner tube is inflated, the sheath is held securely on the rim, and can be removed only by deflating the tire and partially turning the bead as in the manner of its insertion."

Andrae's Road Racer.

Julius Andrae, No. 225 W. Water Street, Milwaukee, Wis., is placing upon the market a new '95 Pattern Andrae Road Racer, an illustration of which is herewith given. This machine weighs but 21½ pounds, with everything on. The manufacturer offers it to the riding public "as a machine suitable for all kinds of road work." He adds: "It is intended for light-weight riders as well as heavy men, and actual tests have

demonstrated that this machine will do as much work as those that weigh from five to eight pounds more." Mr. Andrae will be pleased to send further descriptions, prices, etc., on application.

The Hulbert Model Wrench.

The new Bicycle Wrench here shown is offered to the trade by Hulbert Bros. & Co., No. 26 West Twenty-third Street, New York, as their '95 Model Wrench. The side view is two

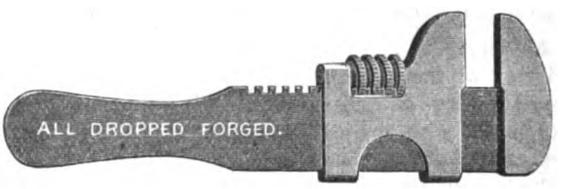


FIG. 1.—MODEL WRENCH.

inches shorter than the full sized wrench itself, the front view is exactly the size of the width of the wrench, but two inches shorter than the length. "This wrench," they say, "weighs three ounces, although it is as strong as last year's wrench, weighing three times as much. It is made of forged steel throughout, and the jaws open 1¼ inches. It is case-hardened or nickel finish, and is," they add, "in every way the best

FIG. 2.—EXACT WIDTH.

bicycle wrench we have ever gotten out. It is particularly adaptable for a vest pocket, being so thin, and now that tool bags are being done away with, or generally discarded on wheels, a vest-pocket wrench is a necessity. It will list at fifty cents."

The demand for low priced builders' Hardware, for which the merchants and factors of Birmingham and district are largely responsible, has resulted in a deluge of very inferior locks, bolts, window fastenings, and other articles, which can only be described as "cheap and nasty." On all grounds the production of these inferior goods is to be condemned. To the workman, it means "sweating;" to the manufacturer, it means unremunerative business; and to the consumer, it means all the loss and worry of inferior work. The only man to benefit is the factor, for even the ironmonger who retails this produce gets small profit and much grumbling for his pains.—*Hardwareman* (London, Eng.)

Met Elwood McGuire last evening. "How's business?" we asked. "Business? why, it's humming. I tell you what I am going to do. I am getting ready to manufacture 30,000 lawn mowers. I did not try to do much last year, but now I have the orders and will soon be working two sets of men, and shall run night and day." This is not surprising to us, as the Dille & McGuire lawn mower is the best made in the world.—*Richmond, Ind., Independent*

There was a large shipment of all descriptions of Hardware to Brazil in October and November, to anticipate the enhanced prices which naturally took effect upon the expiration of the reciprocity treaty on December 1st.

Bicycles For 1895.—IV.

WHAT THE MAKERS SAY AS TO OUTPUT, IMPROVEMENTS AND PRICES.

A VARIETY OF ANNOUNCEMENTS, OPINIONS AND CHANGES.—INFORMATION OF VALUE TO THE HARDWARE TRADE.

A. M. Scheffey & Co., No. 92 Reade Street, New York: Our 1895 catalogue is not yet ready, but we will have the following machines:

Wynnewood M, 28-inch Diamond, wood or steel rim, M. & W. tire; weight, 23 to 26 pounds, $80. Same with Dunlop or G. & J. tires, $85.

Wynnewood L, 28-inch Drop, wood or steel rim, M. & W. tire; weight, 26 to 29 pounds, $80. Same with Dunlop or G. & J. tires, $85.

Wynnewood B, 28-inch Diamond, wood or steel rim, M. & W. tire; weight, 25 to 28 pounds, $60. Same with Dunlop or G. & J. tires, $65.

Wynnewood C, 28 inch Drop, wood or steel rim, M. & W. tire; weight, with brake and guards, 30 to 33 pounds, $60. Same with Dunlop or G. & J. tires, $65.

Wynnewood D & E, 26-inch, for boys and girls respectively M. & W. tire; weight, 23 to 29 pounds, $50.

Wynnewood F & O, 24 inch, for boys and girls respectively, M. & W. tire; weight, 22 to 27 pounds, $40.

The lighter weights refer to Dunlop or G. & J. tires. We have already placed quite a number of machines for the new year, and find that the Hardware people are very much pleased with our line.

ROUSE, HAZARD & CO.'S PRELIMINARY ANNOUNCEMENT.

Rouse, Hazard & Co., manufacturers of the Sylph and Overland Cycles, and bicycle accessories, Peoria, Ill., have issued under date of December 10th, an attractive circular containing their preliminary announcement for 1895. They will have something more to say to the trade in a little different shape, at a later period. In this advance announcement they give descriptions of their Model H Sylph Roadster, scale weight 23 pounds, and costing $100; their 26½ pound Overland Scorcher, which they describe as tool steel with dust-proof bearings, high grade and up to date, and strong enough for any rider over any roads, the cost of which is $75; their No. 6, 28-inch Overland, at $65; their No. 7, 26-inch, $50; No. 8, 24-inch, $40; their No. 10 Overland, suitable for ladies' use, at $50; No. 9, 28-inch, at $65, and No. 11, 24-inch, at $40. Several of these wheels are illustrated. In a note of explanation they say: "Having for some time past felt the necessity of being makers in reality as well as in name, our long experience in designing and inspecting bicycles, and as jobbers, fitting us to an eminent degree for their manufacture, we have completed arrangements whereby we shall hereafter build a goodly portion of our bicycles in our own factory here in Peoria, having put in the necessary machinery for that purpose. We have associated with us bicycle builders of capability and experience, and are using only thoroughly tested materials of the very best obtainable qualities, and shall exercise the same care in building our own wheels that we have always used in designing and inspecting wheels heretofore manufactured for us. Sample wheels of practically the entire line are now ready, and we shall be in position to make shipments in any reasonable quantity before the first of January. We are sure this departure will meet with great favor on the part of our customers, and that our trade, which has constantly grown from the beginning, will reach even greater proportions than ever before. The volume of our business is such, however, that for some time in the future, as in the past, we expect to have a portion of our wheels built to our own specifications under contract by the best makers that can be secured. For many years we have been the largest handlers of special bargain (job lot) cycles in the United States, and our agents have found the control of these goods a valuable part of our agency, as it enables them to meet or beat all competition, and to develop trade during the dull months when otherwise few, if any, wheels could be sold. We shall continue to make a leading feature of sundries and shop supplies, and in short shall be in position to supply anything that is required by a live dealer, making it unnecessary for him to go elsewhere to find goods to supply any customer. We shall sell to but one dealer in a town, which dealer we shall protect, and whose interests we shall further in every way possible. While our goods will be second to none in quality, design, finish and proven salability, we shall not charge a fancy price for reputation, but shall supply our goods on a basis such as to permit a living profit and without embarrassing or unnecessary restrictions."

MONARCHS FOR 1895.

Monarch Cycle Co., Chicago and New York: Recognizing the demands of the riding public, and especially that great class that want the Monarch, we have prepared to gratify our friends, and shall produce for '95 a line of wheels surpassing all our former efforts, which is equivalent to proof that '95 Monarchs will be the acme of bicycle perfection, possessing strength, beauty and durability.

Our line will consist of the following five styles, of which we give a brief outline:

Model No. 8—Ladies'—Weight 26 pounds, 28-inch wheels, wood rims, tires optional, 1⅝-inch; frame, double drop; head 8-inch. Price, $85.

Model No. 9—Gents'—Weight 24 pounds, 28-inch wheels, wood rims, tires optional, 1⅝-inch rear and 1½-inch front; frame 23½-inch, tread 5¾-inch, head 9-inch, chain 5-16-inch, wheel base 44-inch. Price, $85.

Model No. 10—Gents'—Weight 22 pounds, 28-inch wheels, wood rims, tires optional, 1⅝-inch rear and 1½-inch front; frame 24-inch, tread 5¾ inch, head 10-inch, chain ½-inch, wheel base 44-inch. Price, $100.

Model No. 11—Ladies'—Weight 25 pounds, 26-inch wheels, wood rims, tires optional, 1½-inch front and rear; tread, 5¾-inch, head 9-inch, chain ½-inch, wheel base 42-inch. Price, $100.

Model No. 12—Racer—Weight 18 pounds, 28-inch wheels, wood rims, tires, Palmer, M. & W. or New York; frame 24-inch tread 5¾-inch, head 10-inch, chain ½-inch, wheel base 44-inch Price, $125.

All machines are to be fitted with our well known ball holder and dust protector, and all sprockets are to be detatchable by the finest device ever produced. Brandenburg pedals are to be used.

THE OVERMAN WHEELS.

Overman Wheel Co., Chicopee Falls, Mass.: "The season of 1894 has now practically closed, and we are ready to announce our product and price for 1895. In the estimation of intelligent people, quality ranks first; price, second. With the quality of Victor Bicycles in the past you are familiar. With the strength, comfort and beauty of our 1894 bicycles you have, we believe, been thoroughly pleased; but you are well aware that the Overman Wheel Co. has never been satisfied to repeat what it has done; you will expect, therefore, our 1895 wheel to be an improvement on our 1894, and we know you will not be disappointed. In the Victor for 1895 you will recognize a higher standard of bicycle construction, in the line of select material, simplicity of construction, refined methods and mechanical skill. For 1895 we shall make Victors of five different heights of frame, and Victorias of two heights—thus practically furnishing bicycles to order, and enabling riders of all sizes, both tall and short, to be equipped with mounts that exactly fit.

"Prominent among the improvements for 1895 will be our new 1895 crank hanger, with its hollow axle and narrow tread. This improvement has received not only the endorsement, but the admiration of every agent who has had an opportunity to examine it. For simplicity and strength it is a great advance in bicycle construction, and, in itself alone, quite sufficient to entitle us to the reputation of being first in material, first in invention and first in construction.

"The crank pin of other years has been abandoned, and in its stead there has been substituted a construction remarkable for its simplicity and easy adjustment. This new combination produces a narrower tread, and is both lighter and stronger than our old construction. In 1895, for the purpose of giving riders exactly what they want, we shall furnish them, as an option, with a single tube tire of our own manufacture and de-

Digitized by Google

sign, made with special reference to strength, resiliency and lightness. As heretofore, all parts of Victors, from tire to saddle, will be made in our own factory. We shall not manufacture any medium grade or cheap wheels. Our only product will be the highest grade bicycle that we can possibly construct with all our experience, knowledge and facilities. The characteristics of our 1895 wheel are perhaps more striking, more distinct, and yet more harmonious, as a whole, than any former model, and combine in a remarkable degree beauty, strength and lightness. The price of Victor bicycles for 1895 will be $100. Each machine will be furnished with leather tool bag containing Victor wrench, pump and complete repair kit; also a small oiler in a separate leather bag. Brakes, coasters and mud guards will only be furnished when ordered, and at prices for which they are sold as parts."

A CHANGE OF NAME.

Buffalo Tricycle Co, Buffalo, N. Y.: The demand for Envoy and Fleetwing bicycles, having made that branch of our business of more importance than tricycles, we have thought best for the interest of all concerned to change the name of the Buffalo Tricycle Co. to that of Buffalo Cycle Co. The change in name of our company should in no wise be confused with that of the Buffalo Cycle Works, who some two or three years ago manufactured a bicycle called the "Buffalo." Under the name of Buffalo Cycle Co, we will continue to manufacture bicycles and tricycles as heretofore. The trade mark adopted by us will therefore be recognized wherever seen, as being synonymous with good material and honest construction, in whatever we may build and place upon the market.

Recent Incorporations.

Sedalia, Mo.—The Sedalia Hardware Co., incorporated by John M. Delby, Herold and R. W. Griffith, with a capital stock of $15,000.

Brooklyn, N. Y.—The William Tilly Co., to manufacture Hardware and articles used in the construction and decoration of buildings. Capital, $5,000; directors, Edwin M. Moore, William Tilly and A. S. Walsh.

Penn Yann, N. Y.—The Penn Yann Mfg. Co., to manufacture washing machines and novelties. Capital, $10,000; directors, Mellville B. Miller, Thomas S. Burns, Frank M. Fletcher, John W. Walsh and H. R. Phillips of Penn Yan.

Cleveland, Ohio.—Cleveland Continuous Calk Horseshoe Co. Capital, $100,000.

Cincinnati, Ohio.—Hoyer & Boebinger Hardware Co.; amendment changing the name to Boebinger Hardware Co.

Kansas City, Mo.—Clark Stove Co. Capital, $100,000.

Buchanan Brass Hardware Co.

Among the catalogues recently received is one of fifty pages from the Buchanan Brass Hardware Co., limited, of Buchanan, Va., who show a very extensive assortment of wrought brass hinges and hinge hasps, in all the modern varieties; brass door and drawer pulls, fancy brass escutcheons, box corners, straps and brackets, flush lifts and shutter bars. This special class of brass Hardware is much sought after by retail dealers who know the possibilities for profit they give to those who handle a fair assortment.

An order for one hundred Monarchs at a single shipment was taken by J. W. Kiser, president of the Monarch Cycle Co., at Salt Lake City, from M. B. Evans, and another from A. S. Blake, at Colorado Springs, for fifty machines. Mr. Kiser is now in San Francisco, and these contracts were made while en route.

The Gibbs Mfg. Co., Canton, Ohio, the well-known manufacturers of Hardware specialties, furnish us with the welcome information that their extensive works are on the jump at present, with many orders booked ahead for early spring shipment.

The Berlin Iron Bridge Co., of East Berlin, Conn., are furnishing the iron work for the new office building of the Pope Mfg. Co., at Hartford, Conn.

National Bicycle Exhibition.

THE GREAT MEETING IN JANUARY.—LIST OF EXHIBITORS.

The Annual Exhibition to be conducted by the National Board of Trade of Cycle Manufacturers in Madison Square Garden, in January, 1895, promises, and will undoubtedly be, the most extensive and interesting exhibition of that kind ever made in the United States. The growing importance and popularity of bicycling has made exhibitions of this character of great influence and interest, and any visitor at the Madison Square Garden during the coming exhibition, will certainly see and learn more about this great industry in a practical way than he has ever learned before. Spaces have practically been taken by the entire trade, and we are pleased to give herewith a list of the concerns so far represented, with the location of the spaces to which they are assigned, as follows:

1-2. Yost Mfg. Co.
3-4. John S. Leng's Son & Co.
5. F. C. Gilbert & Co.
6. Elliott Burris, "Simplicity 47"
7-8. American Dunlop Tire Co.
9. Keating Wheel Co.
10. L. C Smith Tire Co.
11. Louis Rosenfeld & Co.
12. St. Louis Refrigerator & Wooden Gutter Co.
13. Rich & Sager Co.
14-15. Hill Cycle Mfg. Co.
16. Newton Rubber Works.
17. Mechanical Rubber Co.
18. W. H. Hart, Jr.
20. New York Belting & Packing Co.
21-22. McKee & Harrington.
23. Geo Barnard & Co
24-25 Eastern Rubber Mfg. Co.
26 New Departure Bell Co.
27 28 Geo. N. Pierce & Co.
29. Grand Rapids Cycle Co.
30. Anglo American Iron & Metal Co.
31-31. Syracuse Cycle Co.
35. Wm Read & Sons.
36-37. Columbia Rubber Works Co.
38. Pope Mfg. Co.
39-41. Western Wheel Works.
42. New York Tire Co.
43. J. H. Williams & Co.
44-45. Pratt & Whitney Co.
46. J. J. Warren Co.
47. O. J. Faxon & Co.
48. Curtis Child Mfg Co.
49 Davis & Stevens Mfg. Co.
50. Niagara Cycle Fittings Co.
51. Hitchcock Mfg Co.
52. Queen City Cycle Co.
53. Acme Mfg. Co.
54. League Cycle Co.
55-56. Peerless Mfg. Co.
57. Waltham Mfg. Co.
58-59 Remington Arms Co.
60-61. Indiana Bicycle Co.
62 63. Buffalo Tricycle Co.
64-65. Eagle Bicycle Mfg. Co.
66. Geneva Bicycle Co.
67. Remington Arms Co.
68. Premier Cycle Co.
69. Densmore-Yost Co.
70. Light Cycle Co.
71. Bidwell-Tinkham Cycle Co.
72-75. E. C. Stearns & Co.
76. Premier Cycle Co.
77. Sid B. Bowman.
78-79. Crawford Mfg. Co.
80-81. Union Cycle Co
82-84. C. F. Guyon Co., Ltd., Agents Monarch Cycle Co.
85. Pope Mfg. Co.
86-87. John P. Lovell Arms Co.
88. Relay Mfg Co.
89 Buffalo Wheel Co.
90. Royal Cycle Works.
91. W. H. Wilhelm & Co.
92. Sterling Cycle Works.
93-94. Pope Mfg Co.
95. Ames & Frost Co.
96-97. R. H. Wolff & Co.
98-99. Schoverling, Daly & Gales.
100. Burtis & Zimmerman.
101. Sterling Cycle Works.
103. Plymouth Cycle Mfg. Co.
104-105. Hulbert Bros & Co.
106 107. Warwick Cycle Co.
108. A. M. Scheffey & Co.
109 111. Raleigh Cycle Co.
112-114. A. G. Spalding & Bros.
115-116. Black Mfg. Co.
117-119 Wilson-Myers Co.
120-125. Gormully & Jeffery Mfg. Co.
126A. Whitten Cycle Mfg. Co.
127. M Isenstein & Co.
128. Boston Woven Hose & Rubber Co.
129. United States Tire Co.
130-132. Roger B. McMullen & Co.
133. Bridgeport Gun Implement Co.
134. Porter & Gilmour.
135-136. Garvin Machine Co.
137A. Meyers Mfg. Co.
137B. Cushman & Denison.
138-139. Ames Mfg. Co.
142. Butler & Ward.
154. Mechanical Fabric Co.
156. Clinton Cycle Works.
160. Indianapolis Rubber Co.
161. Strieby & Foote.
162. I. A Weston & Co.
162. Ellwood-Ivins Tube Co.

In Denver, Col., they have an incorporated company with a capital stock of $5000, called the American Wheel Repair Co., and the following is their established tariff, founded evidently on experience: Annual rate, $8.50; weight of rider over 175 pounds, add 5 cents per pound; weight of rider under 125 pounds, deduct 2 cents per pound; weight of wheel under 25 pounds, add 25 cents per pound; age of wheel, over 12 months, add 10 cents per month; age of wheel, under 12 months, deduct 20 cents per month for written guarantee; ladies' wheels, deduct $2; racing permit, $1 per day; minimum rate, male, $6; minimum rate, ladies' wheel, $5.

On December 14th the large plant of the Meyer U. S. Standard Scale Co., in Newark, N. J., was burned. The plant consisted of two frame buildings, two stories in height. In an hour after the flames were discovered the buildings were a heap of ruins. The loss is estimated at $75,000, partially insured, and it is believed that the fire was of incendiary origin.

National Hardware Association.

THE WHOLESALERS OF THE UNITED STATES MEET IN CLEVELAND,

AND FORM A NATIONAL ORGANIZATION.—AN OCCASION OF GREAT INTEREST.—A CONSTITUTION ADOPTED AND OFFICERS ELECTED.—BANQUET.—SPEECHES BY LEADING REPRESENTATIVES OF THE TRADE.

The National Hardware Association is the title of an organization which has just been formed at Cleveland, Ohio, by representatives of many of the leading wholesale Hardware houses of the United States.

This movement had its inception with the wholesale Hardware dealers of Cleveland, the leading members of the local organization believing that the time had now come when a step in this direction should be taken. In correspondence with others in all parts of the country, they had encouragement of the most generous character. Steps were, therefore, taken on behalf of the Cleveland Hardware Jobbers' Association, and invitations sent in all directions to wholesale Hardware firms, to send delegates if it should be deemed advisable that there should be such gathering, for the formation of a national association. Matters had so far advanced by December 5th that announcement was made upon behalf of the Association to the following effect:

"We take pleasure in advising you that the meeting of the Wholesale Hardware Dealers of the United States, to which we invited you, under date of November 10th, will be held in this city, December 13, 1894. This meeting will be called to order at 10 A M.

"The acceptances that we have received up to date, assure us that we shall have a large attendance, and we anticipate most beneficial results from the meeting.

"The headquarters of our Association will be at the Hollenden Hotel, where a reception committee will meet visiting delegates upon their arrival, after 4 P M, Wednesday, December 12th."

There gathered in Cleveland a large number of leading representatives of the trade, and when the first meeting occurred in the parlors of the Hollenden, on the date named, the following firms or companies were represented by leading members thereof:

George Worthington Co., Cleveland, Ohio.
Lockwood-Taylor Hardware Co., Cleveland, Ohio.
H. W. Luetkemeyer & Sons, Cleveland, Ohio.
McIntosh-Huntington Co., Cleveland, Ohio.
Geo. Brown, Knoxville, Tenn.
Isaac Walker Hardware Co., Peoria, Ill.
Johnson Bros. Hardware Co., Cincinnati, Ohio.
Howell, Gano & Co., Cincinnati, Ohio.
Kruse & Bahlman Hardware Co., Cincinnati, Ohio.
Albany Hardware & Iron Co, Albany, N. Y.
Supplee Hardware Co., Philadelphia, Pa.
Shields & Bro, Philadelphia. Pa
Burhans & Black Co., Syracuse, N. Y.
Witte Hardware Co., St. Louis, Mo.
A F. Shapleigh Hardware Co., St. Louis, Mo.
Smith Bros. Hardware Co., Columbus, Ohio.
Wright, Dana & Co., Utica, N. Y.
Weed & Co., Buffalo N. Y.
Barker, Rose & Gray, Elmira, N. Y.
Langstaff Hardware Co., Memphis, Tenn.
King Hardware Co., Atlanta, Ga.
Hamilton & Mathews, Rochester, N. Y.
Walbridge & Co., Buffalo, N. Y.
Bindley Hardware Co., Pittsburg, Pa.
Logan Gregg & Co, Pittsburg, Pa.
Ott Bros. & Co., Wheeling, W. Va.
Morley Bros., Saginaw, Mich.
C. W. Hackett Hardware Co., St. Paul, Minn.
Schrieber, Conchar & Westphal Co, Dubuque, Iowa.
C M. McClung & Co., Knoxville, Tenn.
William Frankfurth Hardware Co., Milwaukee, Wis.
John Pritzlaff Hardware Co., Milwaukee, Wis.
T. M. Warren & Co., Troy, N. Y.
Rector & Wilhelmy Co., Omaha, Neb.
Wells & Nellegar Co., Chicago, Ill.
Bigelow & Dowse Co., Boston, Mass.
William Bingham Co., Cleveland, Ohio.
Buehler Bonbright Co., Philadelphia, Pa.
Wyeth Hardware & Mfg. Co., St. Joseph, Mo.
Lee. Clarke, Andreesen Hardware Co., Omaha, Neb.
Bostwick-Braun Co., Toledo, Ohio.
Freeman, Delamater & Co, Detroit, Mich.
Standard Bros., Detroit, Mich.
Stollberg & Clapp Co., Toledo, Ohio.
W. B. Belknap & Co., Louisville, Ky.
Markley, Alling & Co., Chicago, Ill.
Stauffer, Eshleman & Co., New Orleans, La.

THE FIRST MEETING.

At this meeting William W. Supplee, of the Supplee Hardware Co., Philadelphia, was elected temporary chairman; and W. H. Coles, of the McIntosh-Huntington Co., Cleveland, and secretary of the local Association, was chosen temporary secretary. The election of these gentlemen was followed by the reading of several papers designed to show the feasibility and advisability of forming a national association, which should have for its object the protection of the interests of the trade. These papers were presented by H. H. Bishop, of the McIntosh-Huntington Co., Cleveland; John Alling, Chicago; George T. McIntosh, of the McIntosh Huntington Co., Cleveland; T. A. Parker, Pittsburg; and S. A. Bigelow, of the Bigelow & Dowse Co., Boston. These papers were practical in their tone, and having been prepared by gentlemen thoroughly acquainted with the themes handled, and deeply interested in the object of the gathering, it is needless to say that they made a marked impression upon those present, and proved beyond a doubt that the step taken had been a wise one and that organization along the lines indicated seemed almost necessary for the good of the trade. At their conclusion there ensued a discussion which lasted during the entire morning, and out of which came a decision to form a national association. A committee appointed to formulate a constitution was formed of H. S Blossom, of the W. Bingham Co., Cleveland; S. A. Bigelow, of the Bigelow & Dowse Co., Boston; Mark Shapleigh, of the A. F. Shapleigh Hardware Co., St. Louis; A. D Langstaff, of the Langstaff Hardware Co., Memphis; W. S. Wright, of Omaha, Neb.; and John Alling, of Chicago. The meeting then adjourned until the afternoon. At 2 P M. the second meeting was held, when the committee on constitution reported. The afternoon was spent in taking up this report section by section. When adopted it provided for the election of officers, the appointment of standing committees, and contained the provision that each firm should have one vote.

OFFICERS ELECTED.

It was provided that the officers should consist of a president, two vice-presidents, a secretary and treasurer, the duties of which should be combined in one; and an executive committee, of which the president of the Association should be ex-officio chairman. There was a further meeting on Friday morning, December 14th, and the following gentlemen were elected in accordance with a recommendation of the committee on nominations:

President, William W. Supplee, Philadelphia.
First Vice-President, John Alling, Chicago.
Second Vice-President. A. D Langstaff, Memphis.

Executive Committee, S. A. Bigelow, Boston; H. H. Bishop, Cleveland; Frank Shapleigh, St. Louis; Frederick Barker, Elmira, N. Y.; W. P. Smith, Knoxville, Tenn.; and F. C. Pritzlaff, Milwaukee.

The election of the treasurer and secretary lies in the hands of the executive committee.

It was decided that the next meeting should be held in Pittsburg, on Wednesday, November 20, 1895, at which it is expected that the attendance will be much larger than was noted at Cleveland as the movement is certainly one that will receive the general support of the trade.

A BANQUET TO THE GUESTS.

It is hardly necessary to inform anyone who is acquainted with the generous hospitality of Cleveland, of the fact that the gentlemen who were there as guests of the local Hardwaremen

Digitized by Google

were treated in a manner which sent them away loud in their praises of the Forest City, not only for its beauty and hospitality, but also wondering somewhat at the great extent and variety of its Hardware manufacturing interests.

This hospitality was emphasized on the evening of Thursday, December 13th, when an elegant banquet was tendered the visitors on behalf of the manufacturers of Cleveland. The companies and firms which united as hosts upon this occasion were as follows:

Dangler Stove & Mfg. Co.
Eberhard Mfg. Co.
Ellwood Tin Plate Co.
H. C. Tack Co.
HP Nail Co.
Hart Mfg. Co.
Johnson & Jennings Co.
Lake Erie Iron Co.
Lamson & Sessions Co.
Mechanical Rubber Co.
Cleveland City Forge & Iron Co.
Cleveland Lock Co.
Cleveland Machine Screw Co.
Cleveland Rolling Mill Co.
American Wire Co.
Austin Powder Co.
American Washboard Co.
Baackes Wire Nail Co.
Bourne & Knowles Mfg. Co.
Van Wagoner & Williams Hardware Co.
Van Dorn Iron Works Co.
Winton Bicycle Co.
Amos B. McNairy Co.
National Screw & Tack Co.
Peck, Stow & Wilcox Co.
Peerless Mfg Co.
Schneider & Trenkamp Co.
Standard Tool Co.
Union Steel Screw Co.
Upson Nut Co.
Cleveland Stamping & Tool Co.
Cleveland Stone Co.
Cleveland Tack Works.
Cleveland Twist Drill Co.
Cambridge Iron Co.
Chamberlin Cartridge & Tack Co.
Chapin Bolt & Nut Co.
Cleveland Foundry Co.
Cleveland Hardware Co.
Cleveland Block Co.

This banquet was given in the elegant dining rooms of the Hollenden, and it is hardly necessary to say that all the arrangements were carried out in a manner which indicated unusual care and preparation on behalf of those tendering it. A badge, a reproduction of which is given, was worn, and as

the tables were so arranged that each gentleman knew exactly where his seat was located, everything was conducted without confusion, and in a most harmonious manner. The credit for all of the arrangements connected with this banquet is due the following gentlemen: C. S. Van Wagoner, of the Van Wagoner & Williams Hardware Co; C. E. Adams, of the Cleveland Hardware Co.; W. P. Champney, of the Eberhard Mfg. Co.; S. A. Sague, of the American Wire Co.; F. F. Prentiss, of the Cleveland Twist Drill Co.; and W. D. B. Alexander, of the National Screw & Tack Co., who constituted a committee on arrangements and speakers.

At the centre of the head table sat C. S. Van Wagoner, of the Van Wagoner & Williams Hardware Co., where he most admirably fulfilled the duties of chairman and toastmaster The gentlemen at this table were as follows:

C. S. Van Wagoner, Toastmaster.
C. B. Lockwood; Lockwood, Taylor Hardware Co.
D. A. Dangler; Dangler Stove & Mfg. Co.
A. D. Langstaff; Langstaff Hdw. Co.
W. W. Supplee; Supplee Hdw. Co.
J. H. Hoyt; Hoyt, Dustin & Kelley.
S. H. Chisholm; H. P. Nail Co.
H. S Blossom; The W. Bingham Co.
E. S. Page; Cleveland Rolling Mill Co.
R. R. Williams.
Luther Allen, President Cleveland Chamber of Commerce.
Wm. H. Williams, President Hardware Club, New York
Gen. Jas Barnett; The Geo. Worthington Co.
C. W. Scofield; Lake Erie Iron Co.
G. T. McIntosh; the McIntosh-Huntington Co.

At the head of the various tables, sat the following gentlemen:

G. M. Worthington; Cleveland Stone Co
E. H. Bourne; Bourne & Knowles Mfg. Co.
A. R Treadway; Peck, Stow & Wilcox Co.
W. P. Champney; Eberhard Mfg. Co.
W. D. B. Alexander; National Screw & Tack Co.

The gentlemen at the other tables were:

D. J. Kurtz; The W. Bingham Co.
J. W. Fenner; The W. Bingham Co.
S. G. Rigdon; Mechanical Rubber Co.
C. H. Weed; Lake Erie Iron Co.
H. A. Bishop; Ellwood Tin-Plate Co.
F. E. Drury; Cleveland Foundry Co.
J. C. Lindsay; J. C. Lindsay & Co.
R. C. Moody; Cleveland Rolling Mill Co.
J. H Smith; Smith Bros., Hdw. Co.
P. Schneider; Schneider & Trenkamp Co.
W. B. Wackerhagen; Albany Hdw. & Iron Co.
E. H. Luetkemeyer; H. W. Luetkemeyer & Sons.
C. F. Braun; Bostwick Braun Co.
J. A. Robinson; The W. Bingham Co.
A. T. DeForest; H. P. Nail Co.
T. P. Burke; H. P. Nail Co.
W. T. White; Cleveland Machine Screw Co.
W. M. Clapp; Cleveland Foundry Co.
W. S. Wright; Rector & Wilhelmy Co.
R. T. Coleman; Austin Powder Co.
R. Matthews; Hamilton & Matthews.
H. Trenkamp; Schneider & Trenkamp Co.
C. E. Walbridge; Walbridge & Co.
S. Sickels; Union Steel Screw Co.
J. G. Standart; Standart Bros.
J. Smith, The McIntosh-Huntington Co.
J. E Williams, The McIntosh-Huntington Co.
A. C. Hord, The McIntosh-Huntington Co.
H. F. Lyman; Cleveland Block Co.
J. E. Upson; Cleveland Block Co.
H. Weed; Weed & Co.
J. J. Teeple; Van Wagoner & Williams Hdw. Co.
P. North; Chamberlain Cartridge & Target Co.
G. C. Jennings; Johnston & Jennings Co.
F. C. Case; Lamson & Sessions Co.
J. G. Jennings, Jr.; Lamson & Sessions Co.
Z. T. Sneyd; Van Dorn Iron Works.
Plain Dealer.
C. Babcock; Ellwood Tin-Plate Co.
W. C. Biddle; Biddle Purchasing Co.
G. W. Mudge; Biddle Purchasing Co.
W. C. Reitz; Bindley Hdw. Co.
J. E. Green, The W. Bingham Co.
C. D. Scott; Schrieber, Conchar & Westphal Co.
M. Lewis; Eberhard Mfg. Co.
C. F. Stone; Stauffer, Eshleman & Co.
S. A. Sague, American Wire Co.
R M. Wells; Wells & Nellegar Co.
J. C. Henry, The Lockwood-Taylor Hdw. Co.
B. L. Pennington, The Lockwood-Taylor Hdw. Co.
M. Taylor, The Lockwood-Taylor Hdw. Co.
F. Barker; Barker, Rose & Gray.
J. B. Savage; American Wire Co.
W. E. Newell; King Hdw. Co.
A. E. Converse; H. C. Tack Co.
J. R. Griffith; Shields & Bro.
H. S. Allen; Upson Nut Co.
W. F. McKenzie; Upson Nut Co.
W. H. Coles, The McIntosh-Huntington Co.
J. H. Black; Burhans, Black & Co.
D. E. Dangler; Dangler Stove & Mfg. Co.
C. H. Turner; Albany Hdw. & Iron Co.
A. A. Fonda; Van Wagoner & Williams Hdw Co.
C. W. Tillinghast; 2d; J. M. Warren Co.
G. Deming; The George Worthington Co.
T. A. Parke; Logan, Gregg & Co.
S. Bourne; Bourne & Knowles Mfg Co.
W. M Glass; Lee, Clarke, Andreesen Hdw. Co.
Leader.
World.
C A. Burrell, Hardware dealer.
W. T. Smith; C. M. McClung & Co.
M. Baackes; Baackes Wire Nail Co.
J. W. Hubbard; Hubbard & Co.
H. C. Holt; Lamson & Sessions Co.
M. B. Belknap; W. B. Belknap & Co.
H. H. Bishop; The McIntosh-Huntington Co.
S. A. Bigelow; Bigelow & Dowse Co
A. B Manship; American Wire Co.
G. T. Sprake; Wyeth Hdw. & Mfg Co.
W. A. Neff; Peerless Mfg. Co.
F. W. Davis; Lake Erie Iron Co.
G H. Brown; Winton Bicycle Co.
E. F. Van Zandt; A. B. McNairy Co.
G. S. Baslington; Chapin Bolt Co.
T. G. Walther; C. W. Hackett Hdw Co.
J. Q. Riddle; Baackes Wire Nail Co.
F. C Pritzlaff; Jno. Pritzlaff Hdw. Co
L. F. Blue; Van Wagoner & Williams Hdw. Co.
J. Alling; Markley, Alling & Co.
E. C. Palmer; Standard Tool Co.
C. T. Fletcher; Fletcher Hdw. Co.
W. Austin; Eberhard Mfg. Co.
A. Bahlmann; Kruse & Bahlmann Hdw. Co.
W. H Kolbe; H. W. Lutkemeyer & Sons.
O. B. Main; Howe Scale Co.
L. H. Sholder; Cleveland Lock Co.
J. W. Price; W. B. Belknap & Co.
A. J. Hoston; Hart Mfg. Co.
W. P. Heiskel; Ott Bros. & Co.
C. C. Paine; H C Tack & Co.
E. A. Harvey; Morley Bros.
G. W. Luetkemeyer; H. W. Luetkemeyer & Sons
W. C Johnson; Johnson Bros. Hdw. Co.
K D. Bishop, Cleveland Tack Co.
J. W. Gano; Howell, Gano & Co.
C. R. Luetkemeyer; H.W. Luetkemeyer & Sons.

The tables were most tastefully decorated with flowers and the dinner was most admirably served, the menu of which was as follows:

Blue Points.
Consomme. *Amontillado.* Olives.
Salted Almonds. Celery.
Planked Whitefish. *Haut Sauternes.* Cucumbers.
Potatoes Duchess.
Filet of Beef, Larded. *Pontet Canet.* Cauliflower.
Fresh Mushrooms.
Sweetbreads, Braised. French Peas.
Punch au Kirsch. Cigarettes.
Broiled Quail. White Seal. Lettuce Salad.
Bisque Glace. Cake.
Toasted Water Biscuit and Cheese.
Cognac. Coffee. Cigars.

THE TOAST-LIST.

The toast-list had been carefully arranged, and is herewith given:

Introductory Remarks by the Chairman, - C. S. Van Wagoner.
Van Wagoner & Williams Hardware Co.
Address of Welcome, - - - - - Luther Allen.
President Cleveland Chamber of Commerce.
"Progress Made in the South in Past Three Years Toward Improved Business Methods," - - A. D. Langstaff.
President Southern Hardware Jobbers' Association.
"The Hardware Merchants' & Manufacturers' Association of Philadelphia," - - - - - William W. Supplee.
President Hardware Merchants' & Manufacturers' Association of Philadelphia.
"Cleveland," - - - - - - James H. Hoyt.
Hoyt, Dustan & Kelley.

MR. VAN WAGONER'S REMARKS.

At the conclusion of the feast of good things, Mr. Van Wagoner called the company to order, and in a neat speech, the main points of which are herewith given, welcomed the guests, and paved the way for the presentation of other speakers:

It is with great pleasure, said Mr. Van Wagoner, that the manufacturers of Hardware of Cleveland entertain you this evening. We are very much pleased, indeed, at having this opportunity to meet you face to face. We are more than pleased at the opportunity of meeting those whose names, though we have never met them before, are so familiar that they are almost like household words. I have in my own heart a very warm feeling for many firms represented here to-night, and when I grasp their representatives by the hand. I feel a thrill of pleasure that at last I have met some one who has an individuality, connected with a house with which I have had pleasant relations, and I am sure that is the sentiment of all of us. As manufacturers, we occupy a peculiar position this evening. We don't know exactly why you are here. We suppose it is for some great, good purpose, but we are not sure of it. We have been so often crushed to the earth and had to rise up again, that we are not sure but that this is some well-fledged plot for skinning us still more.

When in this Entertainment Committee it was proposed we should have an embossed anvil on the front page of the *menu* card, I suggested that we should have a sheep with the wool shorn off as representing the manufacturers, and that on the last page we should have what is usually appended to one of our bills—a discount mark of 80, 20, three 10's, 5 and 2½ per cent. That, gentlemen, was to represent you jobbers.

We have had a feeling that you were hatching up something that meant purgatory, like the syndicate buyer, for whom we have not always the greatest love, although we expect to meet him and get his little orders. We do not know exactly what you are hatching up, but we are very sure we will know the consequences before long. We feel that there is only one thing that is going to save us from the syndicate buyer, and that is that we reside and live and move in Cleveland. There are advantages here. I do not dare to tell them, because the first thing we know you will want something extra. These advantages give us the hope that if we persevere in business we will still survive, no matter what you ask of us.

Cleveland, we know, has a great future as a manufacturing centre. We feel that, instead of our always sending our representatives to you, we are going to have you come to us. I believe it would be for your interest as jobbers to come occasionally to see us, visit our plants and make yourselves better acquainted with us. Although we have to say it ourselves, we are a very generous body of men. We are willing to give you the most of our profits and an extra special discount at the end of every six months, provided you keep it yourselves.

Gentlemen, I am not here to occupy your time. There are others here who will welcome you, interest you and tell you of the advantages of Cleveland. But I wish to say, in closing, that as manufacturers we would consider it a very great compliment if you would spend a little time with us. It seems a pity that such a body of men as this should come so far—and we are afraid we shall not see you for many a day—and go away without becoming familiar with our plants. We feel that we have something to show you that will interest you if you will give us the opportunity. I wish now, gentlemen, to refer to a feature in Cleveland that has interested all of its citizens very greatly, and that is that within the last two years there has been a most delightful indication of public spirit in the development of the city through the organization of the Chamber of Commerce. I must say, as a new comer from the East, for I am only lately a Clevelander, that it has delighted me to see the enthusiasm and almost boyish spirit that has been manifested by the Chamber of Commerce in promoting the great interests of Cleveland. I refer to this because we are about to be addressed by one who is an exponent of the energy and enthusiasm to which I have referred.

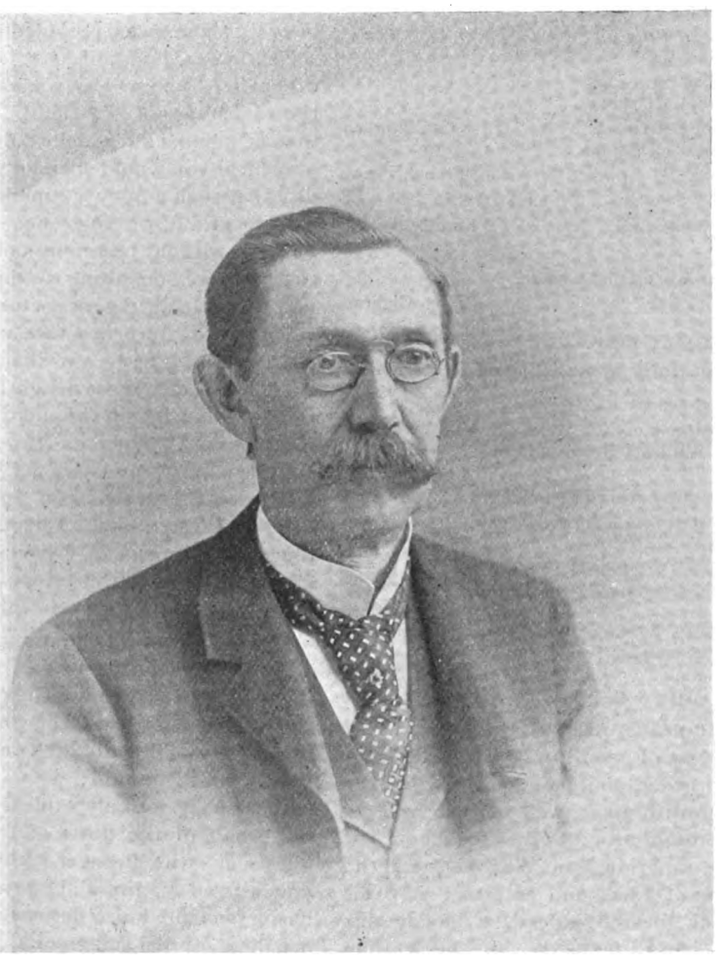
MR. ALLEN'S SPEECH OF WELCOME.

At the conclusion of this speech Mr. Van Wagoner introduced Luther Allen, president of the Cleveland Chamber of Commerce, who had been invited by the local committee to deliver the address of welcome to the visitors of the Forest City. Mr. Allen said:

I esteem it not only a pleasure but a privilege to be invited, on behalf of the hosts of the evening, to welcome you as guests, as "the stranger within our gates," and to extend to you as well a cordial, hearty welcome from every Cleveland business man. I also desire to extend this word of welcome on behalf of our Chamber of Commerce—the outgrowth of our dear old Board of Trade. It was organized less than two years ago upon a line looking to the advancement of our city. I welcome you to the hospitality of our homes, and in every way possible, as would become a citizen of Cleveland. The rooms you have made use of as your meeting place are our temporary quarters only, and when this organization, strong and earnest in the direction for which it has been formed, comes back to us in 1896, our centennial year, we hope to have a magnificent home in which to receive you. That is our ambition which we have no doubt will be realized. I learn that during this day the wholesale jobbers of Hardware have perfected an organization. We Clevelanders are glad that this organization has been perfected here. We think Cleveland is a good place to be born in, either for the individual or the business association. We know it is a good town to live in, and we believe it is a good town to come to.

Organizations such as you have called into being to-day are of great value. I sincerely believe that this particular organization will accomplish great good upon the lines which I understand have been marked out for it. But in forming this organization you have simply laid the corner stone. Organizations, by-laws and rules are all wise and proper, but they do not do

Digitized by Google



all the work. It remains for every individual member of the organization you have called into being to feel that upon his shoulders rests the responsibility of its success in order to realize the best results. As an illustration of this fact I can refer to our own organization—the Chamber of Commerce. A more united, sincere and earnest body of men, numbering more than 1000, was never numbered together in any city. Loyal in every way to the principles underlying its organization, it has already become a powerful factor in every good work of advancement of our city. Therefore you will make your organization strong only by individual effort—by hard work. In such an organization concert of action is absolutely necessary.

It is a source of gratification to me that I have been called upon to deliver this message of welcome to you, and now again, in behalf of our hosts, as a representative of the Chamber of Commerce, and as a citizen of Cleveland, I bid you welcome in the best and fullest sense of that word—one of the few words that may be named in the same breath with wife, mother, love and home.

MR. LANGSTAFF SPEAKS FOR THE SOUTH.

A. D. Langstaff, president of the Southern Hardware Jobbers' Association, next spoke upon that interesting theme, "The Progress Made in the South in the past Few Years towards Improved Business Methods." He said:

I cannot adequately express my appreciation for the distinguished honor of having been invited to address you. Whatever hesitation I might have felt in accepting this invitation if it had been extended only to me personally, became a secondary consideration when I was assured that in addition thereto the manufacturers of Cleveland extended the invitation to me officially as the president of the Southern Hardware Jobbers' Association, and that they desired by and through this invitation to offer the hand of fellowship to that association. In their name I very gratefully acknowledge this kindly expression, and assure you that I will advise each member of the association of this fraternal feeling. I know that in their hearts will be aroused a very genuine response.

PRESIDENT WILLIAM W. SUPPLEE.

When I reached Cleveland on Tuesday morning I had not concluded to be present to-day—had no expectation, even if I remained, of being other than a "looker on" and "gatherer in" of what I might see and hear. I had no expectation of having this "greatness thrust upon me." When I was advised that my friend from the City of Brotherly Love, Mr. Supplee, would follow my short talk with a speech, my mind was comforted by the hope that in like manner, as at the feast held many, many years ago, at which the poorer wine was offered first, so that whatever evidence the guests may have received of its lack of quality was removed by the unquestionable superiority of the flavor and aroma of the wine that followed.

I congratulate the Cleveland Hardware Jobbers for having inaugurated this meeting—for having invited their fellow jobbers from the North, from the South, from the East, from the West. The sincere welcome that you have offered us has formed a lodgment in our hearts and will there be treasured and remembered in days that are to come. The opportunities that have been here presented for a more intimate personal acquaintance, for the interchange of thought pertaining to business methods and business perplexities, will undoubtedly have beneficial results. I congratulate the manufacturers of Cleveland that they have supplemented the efforts of the Cleveland jobbers by inviting the guests to this banquet board. It is the link that will help to bind us together.

There is no factor that is more potent to arouse kindly feelings and to create more favorable impressions of what may have been or may be said here to-night than the good dinner of which we have partaken. I know, from the very pleasant expression upon the faces of each of you, that this entertainment has been enjoyed and will be remembered by the jobbers present, and that they will during the coming year extend to the Cleveland manufacturers such generous orders that will gladden their hearts and will assist in placing the balance at the end of the fiscal year on the right side of the ledger.

Referring to the meeting held by the Southern Hardware Jobbers, at Richmond, last June, and to the previous meetings, I am glad to announce that benefits have resulted therefrom. Among the subjects discussed from which benefits have resulted has been the shortening of the time on which we sell goods and the decrease of dating bills ahead. It had been the general custom by the jobbers throughout the South to carry over to November and December a considerable portion of the indebtedness for goods bought in January, February and March. These accounts would be closed by notes and the notes would be discounted in the banks. Apprehension as to their prompt payment was always incident, and compelled us to retain in the bank, during the months these notes might be falling due, a special reserve to cover those that might not be paid. As already stated, this subject was discussed at considerable length, and each member expressed an earnest wish for a change. A resolution was passed that the members would endeavor to abandon it. It was not possible to make the desired change at once and to uproot a custom that had been fastened on our business from its birth. I do know, however, that the custom has been very much decreased. The jobbers of Memphis began the work of making a change three years ago, and agreed last spring that they would not grant longer time than sixty days. By this co-operation we reduced to a minimum, by June 1, unpaid balances for goods bought during January, February and March. This endeavor to shorten time is not confined to the Hardware jobbers of Memphis, or of other cities in the South, but has been adopted by the jobbers of other lines, and by the country merchants. Their efforts have contributed more than any other to the increase in food products throughout the South. The prime cause of these long credits on general merchandise was that nearly all the

Digitized by Google

available cash was consumed in buying food products, which could only be bought for cash. There has also been very considerable progress made by the members of the Southern Hardware Jobbers towards solving the problem of salaries paid to traveling salesmen, to determine the profits and expenses incident to that branch of the business, so that each salesman would receive equitable compensation.

I have several times to-day been asked the question, "How is business in the South?" I might repeat here to-night the answer that I have made. We have felt the hard times that have prevailed for the past three years, and we feel them now. A wonderful and encouraging change has taken place. We feel that we have crossed the Valley of Depression, and that we are emerging from the dark clouds that surrounded us in 1893. That we are climbing the hill upon whose breast is bright sunshine, cheering us onward and upward to more prosperous conditions.

Previous to three years ago the custom of making advances to the planters to assist them in buying mules and food products to produce a crop was very general and very liberal. The custom of rising nearly all cotton and buying hogs and hominy generally prevailed.

The lessons that had been taught by the press of the South, urging the farmers to diversify their crops, had not been heeded. With a soil capable of producing everything and anything—with seasons offering every inducement for the growth of whatever might be planted—we hesitated to plant anything that might even in a humble way aspire to be a rival of King Cotton. It became evident three years ago to the cotton merchants and to other merchants who had been making these advances that the balances on their ledgers had been increasing, and that they must decline to advance as liberally thereto. The planters were compelled for this reason to depend on themselves and planted more corn, raised more hogs and began the cultivation of sorghum cane. Two years ago the advances were again reduced, followed by increase of corn, hogs and molasses, which are the three principal food factors of the plantations. One year ago the advances were again decreased.

TOASTMASTER C. S. VAN WAGONER.

In three years the number of acres devoted to corn, sorghum cane, potatoes, grasses, grains, hogs, cattle, have increased to such an extent that in the States contiguous to Memphis there is ample for another year. So abundant is the corn crop, that instead of being buyers we are sellers. Instead of having to buy molasses at 50 cents a gallon, there are thousands of gallons for sale at from 15 to 20 cents per gallon, many carloads of which have been shipped to Northern refineries. The vast quantities of corn will enable the planters to increase the production of hogs, of which we will probably have enough for next year's consumption.

These conditions have never existed before. While the price of cotton is lower than at any previous time, everything else is relatively low. The proceeds of a bale of cotton will buy almost as much as when higher prices prevailed. The exposition that I have made of the improved conditions of the South will, I trust, be interesting to the manufacturers present whose products are used on Southern plantations.

I have been asked to-day questions relative to the future of the South. It affords me great pleasure to say that from those who have been observant of the improved conditions that I have mentioned, and who have traveled over the South investigating its lands, that the prospects are very encouraging; that a large number of people, embracing many families from the West and Northwest, have purchased lands in Tennessee, Mississippi and Arkansas, who find in those States a fruitful soil, a genial climate, and are welcomed by our people with a hospitality as warm as hearts can give. No longer are there questions asked as to the politics of those who are seeking homes in our South land. [Applause.] All we want to know is that the new comer is desirous of assisting us in building up our country.

PRESIDENT SUPPLEE SPEAKS.

William W. Supplee, president of the Hardware Merchants' & Manufacturers Association of Philadelphia, next spoke regarding the Association of which he is so prominent a part. He said:

When I received a telegram a few days ago asking me upon what subject I would respond, I replied the Philadelphia Merchants' and Manufacturers' Association of which I was president. I did not realize then there would be so many presidents in the field. We have here, first, the president of your Chamber of Commerce, who has given you a sample of his eloquence; next, Mr. Langstaff, president of the Southern Hardware Jobbers' Association, selected for his qualities known and fully realized only by those members of our association of jobbers who have had the opportunity of seeing as much as I have. I was present at their last meeting at Richmond. It was a pleasure to see how they joined hands in one general feeling for the betterment of trade. When I look to my left I see Cleveland's favorite son. It is Mr. Hoyt, gentlemen, who is to furnish the wine on this occasion. Looking beyond him I see the president of the New York Hardware Club, known for his eloquence throughout this broad land. One reason for my telegraphing as I did, gentlemen, was the fact that the Philadelphia Hardware Merchants' and Manufacturers' Association is looked upon as one of the solidest organizations of the kind in the United States. Other associations have sprung up, but for want of proper support and nourishment they have gradually drooped and died. The neucleus of our association was eight jobbers and three manufacturers. At that time but very few Hardware jobbers ever came in contact with each other. Very few of them were personally acquainted. If they passed in the street they would scarcely have recognized each other. The result of our association has been not only cordiality of feeling but solid intimacy.

Digitized by Google

The object of our association, as stated by our by-laws, is to promote a more cordial feeling among the jobbers and manufacturers of the city of Philadelphia. Thus far it has been a great success socially. Our business meetings once a month have been models. We have a semi-annual entertainment during the year, with discussions, speeches, recitations and songs, and one annual banquet. We look upon these social gatherings second to but very few of any kind in our city. There has never been any dissension in our ranks. On the contrary, many matters have been brought forward and settled that otherwise, outside of our organization, in all probability, would have resulted in very bitter warfare. We look upon its object as very worthy. It was formed because in union there is strength.

MR. HOYT SPEAKS FOR CLEVELAND.

The next speech was that of James H. Hoyt, a prominent member of the Cleveland bar, and an after-dinner speaker whose reputation is by no means bounded by the city in which he lives. Space will permit us to give but one brief extract from his speech,—a speech which from its theme "Cleveland," had more to do naturally with the city of which Mr. Hoyt is so proud than Hardware. He said:

The dawn of Cleveland's future is breaking; her horizon is brightened by the brilliant beams, not of a setting, but of a rising sun. For more than have a century she has been plunged in a profound and dreamless slumber. She has grown great in spite of herself. It is only just lately that she has awakened and begun to stretch herself, only just now that we, her citizens, are beginning to appreciate her beauty, her size, her strength and her capabilities. We heartily welcome you to our growing city. We welcome you all the more warmly because your visit here is not for idle curiosity, and the prime object of your meeting is not for mere pleasure but to improve methods of business and to promote the prosperity, not only of the city but of the whole country. That was a wise thought of the Brobdignagian, whom Gulliver met in his travels, "for he held to the opinion that whoever made two ears of a corn or two blades of grass grow on the same spot of ground where only one grew before deserved more of mankind, and rendered more essential service to his country, than the whole race of politicians put together." What is true of the agriculturist is true also of the merchant or manufacturer. If he raises the standard of his goods, if he improves their quality, if he extends their sales, he renders the most essential service to mankind and his country.

MR. WILLIAMS OF NEW YORK.

Several gentlemen who were not upon the regular list of speakers were called upon, and among them was R. R. Williams, of the *Iron Age*, New York, who spoke for a few moments in his usual entertaining and pleasant vein. He was followed by William H. Williams, of the Van Wagoner & Williams Hardware Co., and president of the New York Hardware Club. Mr. Williams was in his usual happy vein, and among other things said:

After the eloquent address of Mr. Hoyt, who so graphically portrayed the glories of Cleveland, I can even more keenly than three days ago appreciate the honor of being invited to a banquet in this city. You were most kind to invite me, and you have emphasized that kindness by the cordiality of your greeting. For the invitation and the welcome I am deeply grateful in so far as they are personal to me, and in behalf of the organization which I have the honor to represent, I thank you for the kindness and warmly reciprocate the greeting. Meeting, as we do, in this beautiful and progressive city under the auspices of an association comprising some of the largest and most enterprising merchants in our business, with representative guests from almost every important distributing centre of the country, and meeting, as I believe, in a spirit of reciprocal helpfulness for the consideration of matters of common interest to you all, the augury for the future of the interests with which you are severally identified is cause for hearty congratulation.

There was just a little air of mystery a day or two ago about the objects of the gathering—who were coming, &c.—but that was soon dispelled, and it has been beautiful to witness the harmony which in solid chunks has been in evidence about this hotel during the past two or three days.

I well remember an incident that occurred at the close of the "late unpleasantness between the North and the South." You will remember it had been predicted that before the Confederacy would be conquered, grass would grow in the streets of New York. When the news that Richmond had fallen reached New York, a monster mass meeting—one of those spontaneous gatherings of the people that occur in times of great excitement—was held in front of the Custom House in Wall Street, and the venerable Abram Wakeman, who was called upon to speak, raised his hands impressively and warned the people "to get off the grass." You will agree with me that as a wholesale merchant, at least, the jobber is here to stay, while those who predicted his extinction have long since taken their departure. About the only fault I have to find with him is that he lets so little grass grow under his feet when hay is scarce with the manufacturers. We like to talk about the "white wings of commerce," but they are not "in it" with those wingless angels, who, representing the great mercantile houses of this country, carry the peaceful banners of trade into every hamlet where there are wants to be supplied. We hear about "ships that pass in the night," but the commercial tourist passes not. He usually stays in if there is only the ante to be played for. His determined and progressive energy have been a co-working force with art and science and religion in advancing the cause of civilization in the nineteenth century, for wherever he goes he carries information and diffuses sunshine, and when he leaves there is a yearning, if not an aching, void. And so I say that you who are responsible for his employment (and who reap the lion's share of the fruits of his labor) are here to stay, for the system of which you are a part is an integral factor in the civilization of the age.

Mr. Williams, who has the honor of having been the first, and so far the only president of the New York Hardware Club, touched upon the origin and value of the club in a general way, and demonstrated by the successful mission of this club the fact that organization and fraternization are of excellent value to the trade in many practical ways.

As it was now a late hour, no other speakers were called upon. A vote of thanks was given in three rousing cheers to the manufacturers and jobbers of Cleveland for their generous hospitality, and then, upon a suggestion of John Alling, of Chicago, John R Griffith, of Shields & Bro., Philadelphia, led in "Auld Lang Syne," in which the assembled company joined with hearty good will and somewhat unexpected melody.

VISIT THE WORKS.

The visitors in Cleveland were conducted through a number of the leading manufacturing establishments of that city, among which were the great works of the Cleveland Rolling Mill Co., at Newburg, and those of the Van Wagoner & Williams Hardware Co., near the lake shore. On Friday evening the visitors of the city were entertained at a dinner at the Union Club by Stewart H. Chisholm, president of the H. P. Nail Co. The affair was entirely informal, and, while no speeches were made, a great many stories were told, and the affair was unanimously voted a very pleasant and happy finale to an occasion that had been marked by success in every feature, from beginning to end.

AN EXPERT OPINION.

A HARDWARE reporter called upon William H. Williams, of the Van Wagoner & Williams Hardware Co., upon his return to New York, and obtained from him a very pertinent and interesting summary of what had been done, with some suggestions as to what would probably be the future of the new association. In answer to the questions "Was the gathering a success?" and "Will the Association be successful?" Mr. Williams said:

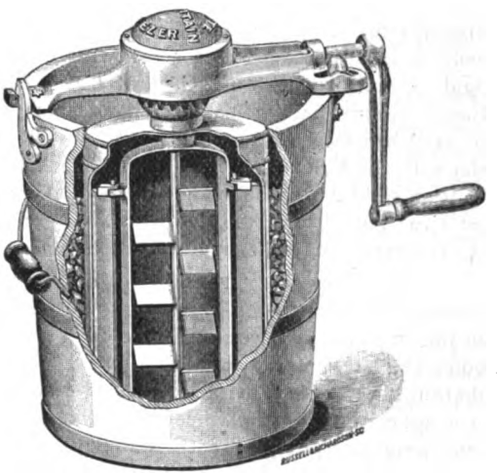
"I can only speak from an observer's standpoint, as, not being a merchant, I did not attend the convention. It seems to me that the start that was made was of a character that promises success for the enterprise. Nearly every large city from Boston to Omaha was represented. Had the gentlemen composing the convention, come there in a spirit of warfare

Digitized by Google

against this, that, or the other real or imaginary abuse, which now exists in our trade, and each one determined to air his grievances, no matter what the effect might be, it is likely that the result of the convention would not have given promise of good results for the future. But a contrary spirit predominated. Each man seemed to think that it was feasible for the wholesale Hardware firms in the country to meet occasionally for conference respecting various subjects, and that they could do so with profit to all concerned. There was a manifest impropriety in discussing some questions in advance of the practical completion of the association. It seemed to me that an excellent start was made, but there are yet some things to do, as I am informed, to perfect the organization, and doubtless at the proper time, certain questions will be taken up and considered, such, for instance, as syndicate buying, net prices, publishing prices, the extent to which manufacturers can, with justice to the large distributors, go in selling retail merchants; and other kindred topics of common interest to all. I have not heard that any plan has been definitely mapped out, but I think it is generally understood that the subjects I have indicated will, at no distant date, receive consideration at the hands of the association. While I was not an attendant upon the proceedings of the convention, I was present in the city while it was in session, and met a great many of the members, and I heard nothing indicative of an unpleasant spirit towards any department in the business. One thing that seemed to me to be a noticeable feature of the meeting, was the many expressions of gratification on the part of those present, at the opportunity of meeting merchants in the same line of business, many of whom were competitors, and it was very pleasant to see the good feeling that prevailed among those who had hitherto been strangers; and this good feeling was not especially the result of Cleveland hospitality, although everyone went away with an enthusiastic opinion on that subject, inspired by grateful memories."

The Hardware clerk in certain parts of Texas finds that his surroundings make up in excitement what they may sometimes lack in culture and society. Some days since as the employees of a store at East Land, Tex., were pensively musing at eventide, six armed and masked men entered the store and attempted a general round-up for the purpose of stealing rifles and ammunition. To the credit of the clerks, it must be said that they made a vigorous response, and in the general fight that ensued many shots were fired, but nobody was hurt, which latter fact is unusual in Texas. The bandits escaped to the woods, and a posse was organized in pursuit.

Now that the refrigerator season is commencing, the attention of those who are interested therein is directed to page 63 of this issue, upon which the Grand Rapids Refrigerator Co., of Grand Rapids, Mich., once more present the claims of their famous Leonard Cleanable Refrigerator. Their statement is terse and attractive, and as the company have a reputation of living up to their promises, and of furnishing just such goods as they describe to the trade, the points they make therein are certainly worthy of attention by all dealers who are interested in this line.



In the last number of HARDWARE, its Davenport correspondent, J. R. Nutting, does a pretty piece of booming for the Tri-Cites and Davenport. It is the kind of advertising which the Business Men's Association has paid big money for and is in one of the best trade publications in the country. HARDWARE has a very wide circulation, reaching business men in every part of this wide country, and as the letter is written in Mr. Nutting's attractive style, it is sure to compel attention and do good.—*Davenport, Iowa, Tribune.*

The Hazard Powder Co., of Hazardville, Conn., are sending their friends a photograph of a group of trophies won by use of the Kentucky Rifle Gunpowder manufactured by them. A mere sight of this photograph is sufficient to warm the blood of any sportsman, and to send him, in mind if not in person, into the woods and fields in search of like conquests.

The White Mountain Freezers.

The White Mountain Freezer Co., Nashua, N. H., with warerooms at No. 105 Chambers Street, New York, whose advertisement appears on page 82 of this issue of HARDWARE, call attention of the trade to a new and important improvement in the celebrated White Mountain Freezer for 1895. The manufacturers claim that there has been a growing demand for some improvement of the regular crank freezer, whereby the time required to freeze cream could be materially reduced. With this object in view, the White Mountain Freezer Co have perfected their White Mountain Freezer by the introduction of a double self-adjusting wood scraping bar attached to the celebrated duplex dasher, which they say "has always been a feature of, and used exclusively in this Freezer," with which they claim "cream can be frozen in four minutes, or less than one-half the time required with any other freezer on the market." They further state that the above result has been repeatedly produced in a legitimate manner, and that there is no reason why the same result cannot be obtained by any person using the freezer.

In this connection, they add, that as it might be inferred that by such a reduction in the time of freezing, the quality of the cream would be seriously impared, they prepared for this possible trouble by the application of a double set of floats to the inside beater rod (see cut) where heretofore a single set was used. "This greatly increases the agitating power of the beaters, and this extra agitation produces the same fine quality of cream that has always been a leading characteristic of the

White Mountain Freezer." They claim "that the White Mountain is now, and always has been the superior of any freezer made, in point of workmanship and general finish. The tubs are waterproof, strong, bound and fully protected by heavy galvanized iron hoops; gearing completely covered so that nothing can get between the cogs; cans full size, and made of the very best quality of charcoal tinplate; beaters of tinned malleable iron (do not break); all castings attached to the tub nicely galvanized to prevent rusting, and it is the only freezer in the world having the triple motion."

It is stated that these freezers are sold by all the leading jobbers throughout the country, and that the demand for them increases every year. The company intend to keep their line in the front ranks and strive in the future as they have in the past, to merit the full confidence of the trade.

The Grafton Stone Co., No. 220 River Street, Grafton, Ohio, upon page 59 of this issue, furnish some information which will certainly be of value and interest to anyone handling grindstones, scythe-stones and articles of that character. This company stand very high in the reputation of the trade, and any proposition they make can be depended upon. They manufacture a full line of scythe-stones, among which are Western Red End, Quinnebog, Diamond, Silver Grit, Harvest Queen, and other well known brands. They state that their enameled baseboard family grindstones are "the latest thing on the market, and each stone is furnished with a screw clamp attachment to secure it to the table." They will be pleased to send prices and further information upon application.

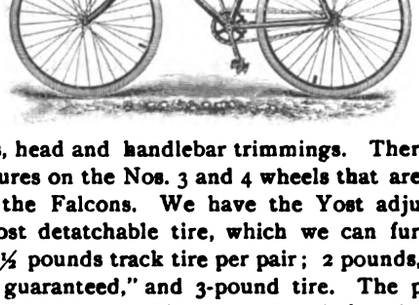
The "Falcon" Line for 1895.

The Yost Mfg. Co., Toledo, Ohio, have permitted us to herewith make an illustrated announcement of their line for 1895. In response to a request from HARDWARE they say:

In accordance with the courtesy extended to use your valuable journal to give a full description of the Falcon line of wheels for 1895, we take pleasure in sending you electros of cuts of the following wheels with description of said line, consisting of seven distinct patterns, ranging from $65 to $100 inclusive.

NO. 3.

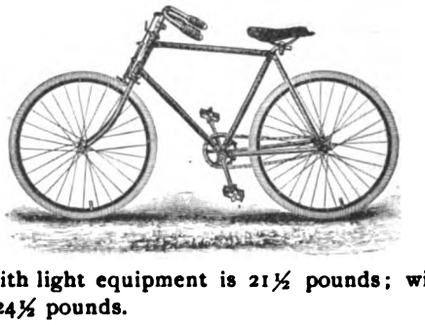


Frame, diamond pattern; tube, cold drawn weldless steel, size from ⅝ to 1 inch in diameter; frame parts, drop forgings; steering head, 10½ inches long, 3½ inches in diameter; handlebars, cold drawn steel with clamp binder 13-16 inch in diameter; handles, corkaline; wheel, base, 44 inches; rims, wood, rock elm or cold rolled steel; tires, Yost detachable or Morgan & Wright 1⅝ inch; pedals, rubber or rat trap, dust proof centre

and bearings; cranks, open hearth crucible steel; chain, solid link blued; chain adjustments, set screw with dove tail side plates rigid and positive; saddle, Garford "M"; saddle post, Yost adjustable; sprocket wheels, interchangeable, drop forged and hardened; bearings, all dust proof, fitted with large balls so popular with the Falcons; cones and ball track, cold drawn steel, cut from solid bar hardened and lapped to size; weight, with Yost tire "guaranteed," 24½ pounds, Morgan & Wright "N" tire, 25 pounds; finish, enamel trimmed in nickel plating.

GOLD CRANK "FALCON" NO. 4.

This wheel we believe to be the most popular and attractive wheel on the market on account of the nicety in points of finish, being the latest model and design in cycle construction, the gold cranks, a new and attractive feature, adding materially to the appearance of the wheel. This wheel, with light equipment, weighs 21 pounds; with road equipment, "guaranteed" tires, 22 pounds. The specifications of frame and parts are identically the same as the No. 3, excepting being 5½ inches in tread, outside measurement, and being finished with



gold cranks, head and handlebar trimmings. There are many special features on the Nos. 3 and 4 wheels that are only identified with the Falcons. We have the Yost adjustable seat post and Yost detatchable tire, which we can furnish in all weights; 1½ pounds track tire per pair; 2 pounds, 10 ounces road tires "guaranteed," and 3-pound tire. The principle of the large ball bearings and large spockets is found throughout the entire line. This principle has been demonstrated beyond a question of doubt as being a correct principle. We give option of adjustable handlebar, or plain, with either Nos. 3, 4 or 8 wheels; also option of Yost detachable tire or Morgan & Wright tire.

NO. 8.

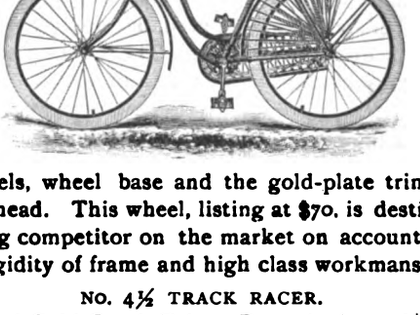
Our No. 8 wheel is designed for riders of short stature and heavy road riding. The frame is 23½ inches high; wheel base, 44 inches; 7-16 ball bearings; large sprockets; adjustable handlebar and seat post; wood or steel rims; Yost or Morgan & Wright tires.

NO. 5.

Our No. 5 wheel is a high grade 26 inch wheel adapted for boys, or ladies wearing rational dress, equipped with 1½ inches or 1⅝ inches Yost tire, wood or steel rims. The weight of

this wheel with light equipment is 21½ pounds; with heavy equipment, 24½ pounds.

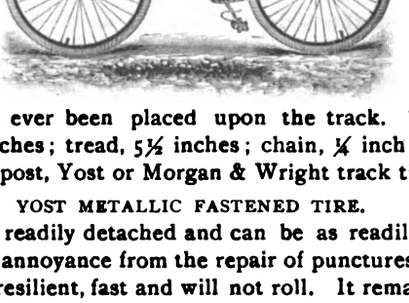
NO. 6 FALCONESS, LADIES' WHEEL.



Our No. 6 Ladies' Wheel is a double drop frame wheel, brazed at yoke and rear, made of the best cold weldless steel tube, steering head 7½ inches, furnished with tool bag, pump, oiler and repair kit, special finish on cranks, head bushings,

head and handlebar, trimmings in 18-karet gold, skirt and chain guard laced with gold cord lacing. This wheel we believe to be a compeer for the No. 4 Gold Crank Falcon, and is a model of beauty in every respect.

NO. 7, 26 INCH FALCONESS LADIES' WHEEL.



Our No. 7, 26 inch Falconess Ladies' Wheel is the same style and design as the No. 6 Falconess, 28 inch, differing only in

size of wheels, wheel base and the gold-plate trimmings on cranks and head. This wheel, listing at $70, is destined to be a very strong competitor on the market on account of its appearance, rigidity of frame and high class workmanship.

NO. 4½ TRACK RACER.

Our No. 4½ Gold Crank Falcon Racer is the only track racing wheel on the market with large sprockets and large ball bearings. These features are known to be correct, reducing friction to a minimum, and, we believe, producing as speedy a

wheel as has ever been placed upon the track. The wheel base is 44 inches; tread, 5½ inches; chain, ¼ inch: Yost adjustable seat post, Yost or Morgan & Wright track tires.

YOST METALLIC FASTENED TIRE.

This tire is readily detached and can be as readily replaced, reducing the annoyance from the repair of punctures to a minimum. It is resilient, fast and will not roll. It remains fast to

Digitized by Google

the rim when deflated, and is the only detachable tire that can be successfully used with wood rims and upon which we give a liberal guarantee.

PEDALS.

The pedals have drop forged ends, 3-16 inch balls, dust-proof centre and ends; weight of rat trap, 14 ounces per pair, attached to crank with right and left-hand tread in crank and on the stud and held firmly to place with set screw.

The "Falcon" line of wheels for '95 is full and complete in every sense of the word, and should be considered desirable from an agent's standpoint for reason that all popular demands can be supplied from the one make of wheels. The general high character and finish of the "Falcons" are destined to be recognized in the front ranks of cycle industry during '95 and can be best appreciated on inspection.

New England Iron & Hardware Association.

The regular monthly meeting of the association was held on Tuesday evening, December 18th, at the Exchange Club, Boston. The occasion was made a sort of Christmas festival, and after the dinner, to which fifty members sat down, packages of toys were distributed. The originator of the idea was Charles C. Adams, of Sargent & Co. The festivities were presided over by Chairman Haley. The speakers of the evening were Lietenant-Governor Wolcott and Secretary of State Olin; S. A. Bigelow, of Bigelow & Dowse Co.; William Chamberlain, of Emery, Waterhouse & Co., Portland, Me., and H. C. Bangs, of the Congdon-Carpenter Co., Providence, R. I.

Most people imagine that pneumatic tires are novelties of recent invention, and yet they were actually used on English roads nearly fifty years ago. We read that "at the Bath and West of England Agricultural Show, held at Guilford, a couple of carriage wheels were shown, fitted with pneumatic tires. These were made by May & Jacobs for the Duke of Northumberland, forty-seven years ago, but the carriage proving too heavy for the horse, they were disused. The tires were constructed on almost exactly the same principle as those in use on cycles to-day, an inner air chamber, with a stronger outer cover. When punctured, they were repaired by the same means as now adopted."

At a meeting of the Hardware Merchants' & Manufacturers' Association of Philadelphia, on Tuesday, December 18th, at their rooms in the Drexel Building, the following nominations for officers were made: President, William W. Supplee; vice-president, Samuel Disston; secretary and treasurer, T. James Fernley. The board of directors for next year will be composed of these gentlemen, in connection with Charles M. Biddle, Fayette R. Plumb, Hugh McCaffrey, John R. Griffith, Elmer E. Brown and Charles M. Ghriskey.

Elsewhere in this number. the H. P. Deuscher Co., Hamilton, Ohio, who stand very high in the line of agricultural implement manufacturers of this country, present illustrations of several of their leading lines. The attention of the retail dealers everywhere is invited to their statement, and those who desire more definite information than is contained therein, can obtain the company's catalogue, with prices, upon application.

The Syracuse Cycle Co., Syracuse, N. Y., whose line of bicycles we described in full in a recent issue of HARDWARE, announce that their line will be disposed of by the A. F. Shapleigh Hardware Co., St. Louis; Farwell, Ozmun, Kirk & Co., St. Paul, Minn., and the Supplee Hardware Co., Philadelphia. This company manufacture the well-known "Crimson Rim," which has won so great a success in the bicycling world.

Chandler Robbins, president of the Chicago Sewing Machine Co., whose impaired health necessitated his lingering several months in the neighborhood of Atlantic City, has recently returned to his home, greatly improved in health and vigor.

The Indiana Wire Fence Co., Crawfordsville, Ind., are sending their friends a very handsome illustrated wall calendar for 1895. A specimen already adorns the walls of HARDWARE.

Review of the Markets.

Money: The supply of money at this point is abundant, and the banks are strongly intrenched as they have been for many months. The movement of gold abroad continues, and is likely to do so indefinitely. During the past seven days the amount shipped aggregates nearly $5,350,000. Rates for money, however, have not been affected. Call loans have been made at 1½%@2%. Time money is offered freely at 1½% for thirty days, 2% for sixty to ninety days, and 3@3½% for five to seven months. Not much commercial paper is being negotiated, and the demand is fair at 3% for sixty to ninety days. Trade is influenced in a depressing manner by the discussion in Congress of the currency question. The bill now before that body does not have the unanimous support of the bankers, by any means, and seems to be losing support in the House every moment. The national Treasury gold reserve is now about $91,500,000, the loss since its replenishment being nearly or quite $18,000,000. The foreign exchange market is quiet. Posted rates for sterling, $4.88½ for sixty-day bills and $4.89½ for demand.

Prices show no indication of an upward tendency, nor, on the contrary, has there been further decline. On Wednesday there was a great public sale of cottons in this city, about 27,000 packages being disposed of at an aggregate value of over $2,225,000. The goods sold from 5% to 10% below regular market rates, and all interested expressed themselves as well pleased at the result. While the sale was pronounced a "great success," it had no visible effect upon the cotton market.

The distribution of Hardware has fallen off perceptibly since our last, but this is to be expected at the end of the year when the time has arrived for the annual inventories and the closing up of the year 1894. Salesmen are being called in by many jobbers. The holiday trade is occupying the attention of most of the retailers, and the volume of such transactions is larger than last year, although the mild weather has retarded sales of seasonable winter goods to some extent. Prices are not to be called firm, though in some lines there is perhaps a better feeling.

There is a fair movement in Barb Wire, with little or no change in quotations as given in our last issue. At the mills, $1.85@$1.90 prevail on carload lots, though it is likely some concession from these figures would be made if necessary to secure an order. Correspondents in Chicago inform us that at that point manufacturers are having a very satisfactory amount of business, the demand being mostly for the higher grades. They say they have enough orders to keep them fairly busy for the first three months of 1895, and, upon the whole, regard the situation as one of great hopefulness. They quote a rate of $2 at the factory for carloads, and $2.05 for smaller amounts. Some important transactions have lately been made in Chicago in plain wire, and the amount involved is so large that it would seem as if buyers anticipated no lower prices very soon.

Nails: Wire Nails remain in about the same condition as a fortnight ago. While manufacturers could take care of more orders, they are not complaining at all. The orders being placed with the trade are of an every-day character, and small lots from store here are quoted at $1.15 to $1.20. Stocks in merchants' hands are apparently light, and with the turn of the year a larger demand is anticipated. Cut Nails still sell on a basis of 85@90 cents on carload lots on dock in this city, and five cents more for small lots. Our Chicago reports intimate that the conditions at that point are unchanged, the demand being only for small lots. These, however, are coming in steadily. Small lots there are quoted at $1.

Iron and Metal: The outlook is not cheering. Prices are lower than ever known in some branches. The volume of work being done is perhaps as large as in some other years, but there are indications that there will be a reduction in the not distant future. There seems to be no cause for supposing we shall see higher prices for some time, and this opinion is reflected in the fact that for lake ores, prices have been made up until next October at the lowest rates made this season, and in the further fact that coke is being sold at very

Digitized by Google

low rates for the first six months of 1895. Steel Billets, it is reported, have sold as low as $15 at Pittsburg—a quotation as low as the lowest that has ever been made. Finished material, in sympathy with other iron products, is also low in price, but there is a better demand reported. Foundry iron seems to be held rather more firmly, and it was even reported on the street that a leading Southern company had advanced its rate $1 per ton, and had 170,000 tons of orders on its books. Pig Tin has steadily pursued a downward course. Shipments from the Straits are reported ample, so higher prices are not anticipated soon. We quote $13 70@$13.75 for large lots. Copper: Lake ingots quotable at 10 cents, and for outside lots, 9⅞ cents. There has been a slight advance in rates. It is likely that the output for the next few months will be under the average. Tin-plate exhibits a little more activity, but the demand is not great. Some improvement will probably be noticed as spring preparations for canning begin, which will be very soon after the turn of the year. The rapid development of this industry exerts a decided influence upon the amount of tin-plate consumed in this country.

Pig Lead: Transactions are not extensive here. Supplies are only moderate, and rates are quite firmly held. Car lots, $3 15@$3 17½ for common Western. Spelter, easy. Market remains dull and devoid of interest, as has been the case for a long time. We quote $3 35@$3.40 for Western ordinary. Antimony, dull and rates practically unchanged. Spot quotations, 7¼ for Hallett's and 8½ for Cookson's. Shot: Demand from manufacturers moderate. Market rules rather dull all around. The schedule of prices as made by the Association remains without change as follows: Drop shot, up to B, $1.15 for 25-pound bags; 30 cents for 5-pound bags; B and larger, $1 40 for 25-pound bags; 35 cents for 5-pound bags; buck and chilled, $1.40 for 25-pound bags; 35 cents for 5 pound bags; dust shot, $1.75 for 25-pound bags and 40 cents for 5-pound bags. Discount at 20 cents per 100 pounds, and 2½ per cent. will be allowed on lots of 2000 pounds or more. Terms—Net, 30 days, 2 per cent. discount for cash in 10 days; freight equalized with any manufacturing point east of the Mississippi River.

Linseed Oil: Demand light; but quotations are firmly held as follows: Raw, American seed, 56 cents; boiled, American seed, 59 cents; raw, Calcutta seed, 56 cents.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Clapp & Co., bankers and brokers, Mills Building, this city, says in their weekly market letter: "The United States system of collecting information about crops in the 2500 agricultural counties of the United States appears the best on earth. California does about half her fall seeding before Christmas. The visible supply is more than 10 per cent. larger than a year ago, or more than 88,000,000 bushels. The amount afloat and the European visible gained the past week nearly 4,000,000 bushels. The world's visible December 1st, according to the *Daily Bulletin*, was 218,857,000 bushels against 235,388,700 bushels a year ago and 231,575,000 December 1, 1892. Ordinarily, about the holidays it is around the maximum amount reached. A steady decrease is now likely. Should Black Sea and Argentine shipments fall off, a good demand might spring up the early part of 1895 to fill up the 35,000,000 bushels deficiency in the European visible supply. Producers usually market the larger part of their crop the first ninety days after harvest. If they were to take twelve months in disposing of their supplies or only deal it out in quantities to create ambitious buying, we think consumers would enhance values to the satisfaction of growers. English buyers would certainly be more anxious if American visible supplies were in growers bins. Perhaps it was farmers' urgent needs that created hasty distribution and broke prices below all known records, rather than excessive supplies as has been supposed."

THE DAVENPORT TRADE.

Trade is improving, and the aggregate is larger than a year ago at this time. The orders are, however, for goods for immediate wants, and there is no evidence that the trade is anticipating requirements for anything except barb wire and nails.

Most of the goods selling comprise a vast number of articles, indicating light stocks that need frequent assorting additions. It may also be stated that goods intended for holiday trade, such as skates, hand sleds, cutlery, plated ware, especially aluminum novelties, etc. make up quite a percentage of sales.

The weather has been unusually pleasant, December, so far, seeming more like October than winter. The roads are in perfect condition, giving farmers an opportunity to market their products, and their presence adds very much to the lively appearance of our towns.

The Sylvan Steel Works are completed, and are now running full time; they announce that they are ready for orders for both hard and soft steel, bar iron, etc., etc. The opening of this mill is an important acquisition to our already large manufacturing interests.

The United States Arsenal here has completed it's first five-inch calibre Howitzer seige gun carriage; it stands six feet high to the centre of the gun axle, weighs 1850 pounds, while the gun itself weighs 3650 pounds. The gun will carry the heavy projectile five inches in diameter a distance of sixteen miles; there are twenty of these gun carriages being built now at the arsenal in addition to the one mentioned.

Robert Sickels, of Sickels, Sweet & Lyon, of New York, and also our worthy president, has just paid us a visit.

SICKELS, PRESTON & NUTTING CO.

THE CLEVELAND TRADE.

Business has kept up for the present month better than we had anticipated, demonstrating beyond doubt that stocks are in a very impoverished condition and need constant replenishing.

A large number of orders have been taken for staples, such as wire and nails, for future delivery. Aside from this, however, there seems to be a tendency upon the part of the trade to hold off, awaiting developments. The mild weather of the past two weeks has had bad effect upon the sale of skates, sleigh bells and other seasonable articles of that description, but if experience of the past is an index, we will yet have some weather that will make these articles move and clean up all stocks.

Holiday trade is satisfactory, and a decided contrast to that of a year ago, when everybody was suffering from the effect of the six months previous. There is undoubtedly a more confident feeling prevailing in general, and we believe that the spring of 1895 will show a very decided improvement over the corresponding period of 1894. The outlook is cheerful, and at the gladsome season now approaching, it is pleasant to feel that the prospect for the future is encouraging.

We wish all your readers a Merry Christmas and Happy New Year. THE MCINTOSH-HUNTINGTON CO.

THE BOSTON TRADE.

The usual conditions that are noticed at the close of the year are now prevalent, and stocks are being put into such a shape as to make the detail and work of inventory as light as possible. The amount of business has been satisfactory during the last quarter of the year, and shows a good increase over the corresponding season of 1893.

At this time when it is natural to look forward and conjecture what are the prospects of improvement in industrial conditions, we can see much to be thankful for. During the past two years the business men of this country have been subjected to a long succession of events, the tendency of which was to

Digitized by Google

curtail business and depreciate values. Certain important events have been anxiously looked forward to as the turning points in the long story of depression, but now the prospects seem brighter, and how far the promise is to be fulfilled, is an important question.

Both political parties are willing to lay down their arms over the tariff question, and we are confidently expecting that this subject is out of danger for the present. The issue of fifty millions of government bonds, and successfully placing the same at a handsome margin, prove that our credit is still unimpaired.

The depreciation of many inflated stocks, the fall of the cordage trust, the proof that it is impossible to divide Southern mountains and marshes and sell them for corner lots, the fall of the Atchison system which proved itself to be built upon sand—all these conditions, although unfortunate and expensive, have done much to place us upon sound business basis, and we are to-day in that state of industrial health which is encouraging.

As we close the year with such conditions, may we not have good reasons to be hopeful for 1895?

FRYE, PHIPPS & CO.

THE MINNEAPOLIS TRADE.

The year 1894 has not been a prosperous one, on the whole, for the retail Hardware dealers in the "twin cities." There has been very little building; much less than for many years, and while there is a much more hopeful feeling at the present time, naturally for the next two or three months, trade will be very quiet, as is usual during our severe winter weather.

Inventories will be taken soon now, and if taken honestly at current market rates, stocks will show a larger shrinkage in values, and in many instances without doubt the profits during the year have not been sufficient to stand this shrinkage. During the past two years there has been a gradual weeding out of a great many small contractors, and many of them have not been able to pay their bills in full, thus making an additional loss to dealers who have been supplying them. Many of these parties would have been able to pull through had there been a fair amount of business during this year.

Money is plenty and at moderate rates on good security. At the present time it is cheaper than it is in the East, there being a general tendency to liquidate, rather than to use money for new enterprises.

Stocks in the hands of local dealers are light, and should there be a revival of building interests here in the spring, there would be a good demand from this section. Prices are low and competition very sharp on what business is offering, and in many cases contracts have been taken at figures which it is hard to believe would leave any margin for profit.

The traveling men for jobbing houses are all in now, getting ready to start out soon after the opening of the new year.

The weather is fine; no snow. It is giving the lumbermen considerable uneasiness, as there are large quantities of logs skidded, waiting for snow so they can be hauled, or steady cold weather, which would enable them to make ice roads, something they have not been able to do thus far this season, but as Minnesota is pretty sure of a good crop of ice every winter, undoubtedly they will have an opportunity to haul their logs later on.

We all say "good-bye" to 1894, and hope that 1895 will do better for us and the country at large.

W. K. MORISON & CO.

THE LOUISVILLE TRADE.

The year now drawing to a close will long be remembered by business men as in many respects a remarkable one. The ball that was set to rolling by the Barings failure, and went the rounds, knocking down all the pins in its pathway, was but the forerunner of other evils that followed—lack of confidence, and the consequent withdrawal of money from circulation, followed by reduced purchases and accumulation of manufacturers' stocks; next, reduced hours of labor in factories, followed ultimately by "shut-downs" and the logical accompaniment of hosts of idle men.

Ominous mutterings, rumblings of the approaching storm could be heard as early as a year ago, presaging the cyclone of violence that swept over the country during the past summer. Early in the year idleness and want hung like a pall over the masses; later, discontent, defiance of law, and violence, characterized the acts of the unemployed.

Municipal, state and national expenditures were piled up, in suppressing disorder, and business interests lay helpless on the dissecting table at Washington, and almost died of exhaustion while the doctors were discussing their ailments. Had our national representatives, when urged by the press and the people to do so, over a year ago, indulged in less oratory and jokes, and pushed needed legislation, possibly a retrospect of the business of 1894 might have been a more cheerful one.

Unprecedentedly low as prices seemed to be at the beginning of the year, further declines continued to occur, notch by notch, until from twenty to thirty per cent. had been swept from the figures leading staples represented then. Surely pessimists should be satisfied with this verification of "I told you so," and ought now step aside and give the other fellow a chance.

At present prices we ought to be able to ascertain "where we are at," and those who take account of stock on the 1st of January will doubtless appreciate the merits of the basic system. The opinion expressed in a former letter, of the existence of a better feeling, has been strengthened since then. Reports from all sections confirm the resumption of confidence in approaching better times, and this in itself constitutes an important feature.

There has been no increase of trade here since we wrote last, but at this time of year we would be surprised were it otherwise. Save the slight advance made by the Bolt Association there have been no changes worth noting in prices, except that wire nails and wire seem to be exceedingly weak. Whether this has been brought about by the fondness of manufacturers for this market, we cannot say, but it is hinted that a stock of these goods, which is being placed here by one of the makers, has something to do with it. The cause may be open to conjecture, but the effect is apparent.

We beg to salute HARDWARE and its editors, and wish it and them good health and lots of good luck during the coming year. We doff our hat to your readers also, and trust the New Year will prove to us poor jobbers the harbinger of better times.

THE TODD-DONIGAN IRON CO.

THE AUSTRALIAN TRADE.

There is very little improvement in the volume of general trade. Money in the country districts is tight, as a result of the necessities of the farmers, who, at this time of the year more than any other, just before harvesting commences, find it necessary to ask for a good deal of accommodation.

While there is no marked improvement, yet the business done is of a more healthy character, without extravagant credit and on a much sounder basis than ever before. The good results of such policy will manifest themselves in the future.

A general reduction in bank deposit rates has taken place, due to the banks having more money offered them than they can profitably employ. This reflects the prevailing want of confidence; but the continuance of low rates will inevitably lead to the seeking by depositors of other channels for their surplus capital. There is no doubt many such opportunities exist, and of a perfect stable character. With the application of cheap money to the development of producing industries general business will enjoy a much needed revival.

In the meantime country interests are in fairly good shape, and there is every reason to expect an exceptionally good season for all crops. Dairy produce is being exported in large quantities and the production of gold is on the increase.

MCLEAN BROS. & RIGG, LTD.
Walter J. Travis, Mgr.

Nos. 52 and 54 New Street, New York.

The extensive plant of Plumb, Burdict & Barnard, at North Tonawanda, N. Y., which has been erected for the manufacture of nuts and bolts, is now assuming such proportions and so rapidly approaching completion, that the company are beginning to see the promised end. They think that the building will be completed by February, and that over 1000 men will be at work therein by the first of May.

Exports of Hardware Goods.

A series of statements showing the exports declared for the United States at the consulates and agencies of foreign countries during the quarter ending September 30th have been received in response to an order issued by the department of State to consuls-general in Canada, Mexico and the various countries of Europe, who are instructed to transmit as soon as possible after the end of each quarter consolidated statements of exports to the United States declared in their respective districts and those subordinate to them. The consuls were directed to forward to the consul-general having supervision over them the statement of exports for their district. The totals often include reports from ports not particularly enumerated. The declared exports of different countries thus far received show the following declarations for Hardware and kindred goods:

Belgium: Iron barrels, $434.25; cartridge shells, $694.25; firearms, $157,109.79.

France: Hardware, machinery and metal manufactures, $35,287; platinum, $12,402; nickel, $1911; tin and tin cans, $10,829.

Germany (Frankfort and subordinate consulates): Iron wire, steel and cutlery, $469,657.92; platinum wire and platinum, $59,793.54.

Russia: Platinum, $14,935; sheet iron, $10,467.

Sweden and Norway. Iron wire rods, $119,495.03; nail rods, $54,815.73; mica, $139.

Switzerland: Hardware, $6204.06.

British India: Mica, $18,568.

J. W. Kiser, president of the Monarch Cycle Co., Chicago, has been spending a few weeks on the Pacific Coast in the interest of the Monarch wheel. He is on his way back with his pockets filled with specifications for future delivery. Bicycles will thrive in 1895.

All Names for Bicycles.

Here is an amusing linguistic consultation on the subject of the denomination of the velocipede in different languages: In French it is called "celerifere" and "velocifere." Then came the words "bicycle," "bicyclette," "veloce," and at last "velo." The word "becane," which has also been given to it, is taken from the Argot. Its etymology is unknown. It signifies simply machine. In Italian it is called "velocifero," "velocipede," and "bicicletta." The same in Spanish. In Germany it is "farrad" or simply "rad," just as in English they say "wheel." The Chinese sometimes call it "gaugma," which means "foreign horse," and sometimes "fei chai," "flying machine." They also call it "tzu tzun," "carriage-that-goes-without-horse." But the palm must be given to the Flemish. In addition to the appellations, "snelwiel," "voetwiel," and so forth, some of the wags on the banks of the Escault have baptized this winged contraption with the centipede name, "Gewielsnelrijvoettrappeudneusbrekergestel!!!"—*Courier des Etats Unis.*

The local scribe of Franklin, Iowa, informs a listening world that "Fred Weber has opened a soft Hardware and wet implement business." Will some genial traveling salesman acquainted with the secrets of the West kindly explain what this means?

The Naugatuck Malleable Iron Co., at Naugatuck, Conn., have placed the contract for their new annealing room with the Berlin Iron Bridge Co., of East Berlin, Conn. The building will be 94 feet wide and 175 feet long, entirely of fireproof construction.

MANUFACTURED BY

FRANCIS KEIL & SON,

New York, U. S. A.

A meeting of the Stove Bolt & Tire Bolt Manufacturers' Association of the United States, was held in Cleveland, Ohio, December 13th. About a dozen manufacturers from different parts of the country were present, and the afternoon was spent in talking over the condition of trade and methods of improving it. Among those present were J. A. Nealey, Providence; W. G. Smythe, New York; R. H. Birdsell, Port Chester, N. Y.; Samuel Comly, Port Chester; H. A. Lanman, Columbus; S. J. Hayes, Mt. Carmel, Conn., besides several gentlemen from Cleveland.

In the list published in our latest issue of the exhibitors at the coming Chicago Cycle Show, the name of the Keating Wheel Co., Holyoke, Mass., was omitted. It was of course well known by any one who has knowledge of this enterprising company, that they would be on hand up to time and in full force. They will be found in space No. 17, where they will have an elegant display of their eight new models, and hope "there to renew acquaintances with all their old Western friends, and to make a great many new ones."

HIGHEST GRADE.

The *Puritan* is the best bicycle that time and study combined with practical experience can produce.

—MADE BY—

O. J. FAXON & CO., 3, 5, 7 Appleton St., Boston.

Send for Catalogue.

Profitable to the Dealer, Indispensable to the Machinist and Engineer.

It is an absolutely pure, foliated, water-dressed and air-floated American graphite, from our own mines at Ticonderoga, N. Y. It has unrivaled smoothness and endurance. It is entirely inert, and not affected by heat, cold, steam, acid, or any known chemical. It largely increases the lubricating value of oils and greases. It may be mixed in water, oil or grease, or used dry.

Jos. Dixon Crucible Co., Jersey City, N. J.

A Satisfied Customer The Best Endorsement.

Utley, Wis., Nov. 21st, 1894.

Geuder & Paeschke Mfg. Co.,
Milwaukee, Wis.

Gentlemen:

The Cream City Flour Bin and Sifter is duly tested, and I am pleased. I can assure you it gives the utmost satisfaction. Having previously tried one of another make, which proved entirely inadequate for the use for which it was designed, I am better able to appreciate the merits of yours. I would not be without it.

Respectfully,
Mrs. J. D. Sherwood.

Do You See the Point?

The Layman Pneumatic Sporting Boat

Is just what every sportsman wants. A lighter, safer and more convenient boat than was ever before on the market. Weighs but 20 pounds. Is easily collapsed and folded into a small package, and you may carry three or four of them under the seat of a buggy. Is absolutely safe in any waters. Is propelled by the feet, thus leaving the hands free to use gun or rod. Is made in four compartments of the best rubber duck cloth; has loops for erecting a blind to shield you from the game; is quickly inflated, and in every way a success. Weight about 15 pounds.

The Two Factors

that determine value as a quick seller are

In short,
The Grafton Mounted Grindstone is "well hung."

a. Quality.

The Grafton Grindstone is exceptionally sharp and quick-cutting and will not glaze. The frame is strong, well-built and well-seasoned. The castings are of malleable iron.

b. Appearance.

The Grafton Grindstone frame is well proportioned, well finished, and well painted with a bright, attractive, glossy red.

Important Announcement.

TO OUR PATRONS AND THE TRADE GENERALLY:

Our new Catalogue for 1895 will be ready for distribution within a few weeks. We take this means of announcing in advance of its publication, that we have very carefully studied the requirements of the trade in every particular, and that our lines will be complete. We will place on the market specialties in entirely new goods that will commend themselves both by reason of popular prices and their many attractive and desirable features. In addition to new and popular lines, we will have something entirely new in the line of our very popular Oilgas Cook Stoves, containing our new burners that are giving such perfect satisfaction. Write for further information and prices.

PERSISTENT

Enterprising people are beginning to learn the value of advertising the year round. The persistency of those who are not intimidated by the cry of "dull times," but keep their names ever before the public, will surely place them on the right side in the end. Think over the persistent advertisers you know.

Digitized by Google

Before you buy a

REFRIGERATOR

Examine its selling points.

See if it has movable flues for cleanliness. Be sure it has airtight locks. Get a kind where the Ice Rack is all metal. Don't buy any with slimsy tin or wire shelves. The trimmings should be real BRONZE, not iron, bronze plated. The walls should be packed solid with charcoal, and extra insulattion, such as water proof sheathing and wool felt, should also be added. The designs should be new and the finish up to date. Such an one is the

Leonard Cleanable Refrigerator.

A perpetual circulation of Dry, Cold Air keeps the food from becoming moist or musty. The interior construction returns water from accidental leakage to the waste pipe and insures its durability. The above advantages together with

THE LOWEST PRICES EVER KNOWN

Should secure your trade. Write for Catalogue. Our advertising methods for the coming season are unique and will bring you trade.

SECURE THE AGENCY.

We have the largest Refrigerator factory in the world.

OUR STEER HEAD BRAND

of Butcher Knives are made of the **Best Double Shear Steel** obtainable. The greatest care is exercised in every branch of their manufacture and every knife severely tested before leaving our factory.

They are made in sizes from 6 to 14 in. and are especially designed for butchers or others who want the best knife made, who know a good knife when they use it and are willing to pay a fair price for a knife that suits them.

Dealers are authorized to sell these knives with the understanding that if after a **fair trial** purchaser is not satisfied it is the best knife made anywhere he shall bring it back and get his money.

Necessarily such a knife sells at a high price, but it is the cheapest in the end, and there is a good profit to dealer.

WELL MADE GOODS.

James Mann & Sons, Buffalo, N. Y.

Digitized by Google

No Disagreeable Odor. No Ashes Light and Heat in Abundance.

No. 327. No. 3 Lift Burner.
Height, 23½ inches. Spread of Base, 12½ inches. Nickel Finish.

THE MILLER OIL HEATERS.

Just the Thing for All Time and Every Day Use. For Spring, Summer, Autumn and Winter.

They are an Assured Success, from the fact that the Lamps used are "The Miller Lamps" THE LATEST AND BEST.

IN THESE HEATERS YOU HAVE A HAPPY COMBINATION: The Best Light. The Best Parlor Heater. The Best Cook Stove.

They are Clean and Odorless. Require no more care than an ordinary lamp. Cylinders of Russia Iron, with Removable Nickel Tops, or with Combination Heating Drum and Grate for Cooking. The No. 3 BURNERS have a FLAME OF 15 SOLID INCHES. "MILLER" HEATERS have outside SCREW ADJUSTMENT for regulating the Wick and PLUNGE MOVEMENT FOR EXTINGUISHING; each one is supplied with an extra Flame Spreader so that Lamp can be used for ILLUMINATING when not wanted as a Heater. All of the Best Material and Workmanship.

They will heat a large room perfectly. A tea kettle of water heated in a few minutes by removing canopy.

Perfectly Safe. They Cannot Explode. Oil Never Gets Hot in the "Miller" Heater. A Good Companion for a Cosy Nook. A Comfort on a Chilly Morning.

A MOST IMPORTANT FEATURE.

☞All the weight of the Cylinder rests solidly on the FOUNT and not on the BURNER in these Heaters.

In IMITATIONS of these Heaters the Cylinder is supported on the BURNER, a CHEAP and WEAK CONTRIVANCE, which makes it necessary to REMOVE THE CYLINDER for lighting and which renders it impossible or very dangerous to use the Heater for cooking purposes.

Send for circular showing Heaters with ovens for cooking. We have 12 varieties.

These Lamps hold One Gallon of Oil. Will Burn 12 hours. Easily Lighted by Lifting Top of Burner.

—MANUFACTURED BY—

EDWARD MILLER & CO., MERIDEN, CONN., United States of America.

NEW YORK STORE: 10 & 12 College Place and 66 Park Place. BOSTON STORE: 63 Pearl Street. CHICAGO STORE: Rooms 808 and 809 Masonic Temple.

READY TO LIGHT, WITHOUT REMOVING CHIMNEY.

No. 328. No. 3 Lift Burner.
Height, 32 inches. Spread of Feet, 11¾ inches. Russia Iron with Nickel Lamp and Trimmings.

The Perfect Oil Heaters

No. 20 Perfect.

No. 20 and No. 12.

The Two Leaders For This Season.

B. & W. SKATE SHARPENER.

—BEST SELLING IN THE MARKET.—

Handy to carry, does the best work, is made of malleable iron, full nickeled; the handsomest article of the kind on the market.

By its use the dullest pair of skates can be sharpened in five minutes, by any child old enough to skate.

In use, the side of the Sharpener forms a right angle with the file, making it practically impossible to file anything but a true plane on the skate, or to round the edges. As the file wears, it can be moved its full length on four sides, thus giving a great amount of filing surface. Put up one dozen in a box. Write for price.

HOWARD COACH MAKER'S VISE.
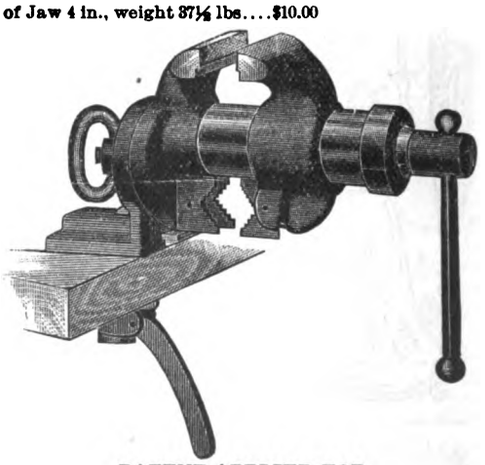
FIXED.

No. 2, Length of Jaw 4 in., weight 37½ lbs....$10.00



PATENT APPLIED FOR.

UNIVERSAL COMBINATION WHEELRIGHT AND METAL WORKERS' VISE.

Length of Jaw, 4½ in., opens 4¼ in., weight, 88 lbs., $15.00.

UNIVERSAL COMBINATION VISES.

These Vises are very handy mechanical appliances for general use, as they combine two different and separate vises in one. They are made very strong, and will swivel in any direction. The "Combination Pipe and Metal Workers' Vise," for instance, will be found a very useful and practical instrument in every engine room, as the engineer, with the aid of a few pipe tongs and die plates, can, in most cases, do all the small repairing and fitting of pipes, etc., himself.

PATENT APPLIED FOR

UNIVERSAL COMBINATION PIPE AND METAL WORKERS' VISE.

No 102. Length of Jaw, 4½ in., opens 4½ in., and will take from ⅝ in. diameter to 3 in. pipe; weight, 80 lbs.....$15.00

No. 103. 3-in. Jaw, opens 4¼ in., and will take from ⅝ in. to 2 in. diam. pipe, wt., 52 lbs.$12.00

These Vises have been manufactured by us since 1865 and meet with general favor. They are strong and simple. Every Vise Warranted. Liberal discount to the Hardware Trade. Orders solicited.

Truss Bottomed FLAX FIBER Pails

Overcome all objections. They **are not** clumsy, partially water-proofed, brittle; their bottoms do not warp out, nor swell and shrink and get loose. They **are** strong, elastic, thoroughly water-proofed, more capacious than other makes, and handsomely finished; while the **truss bottom** holds up its load, but is immovably affixed to the pail. Every man and woman who sees wants them. To introduce them we will ship a trial two dozen to any dealer on receipt of $5.00, or we will send to him free, express charges prepaid, a sample pail.

Standard Fiber-Ware Co., - Mankato, Minn.

REFERENCE BOOK

FOR HARDWARE DEALERS.

To enable them to purchase to the BEST advantage.

The Names of all the Manufacturers, over 15,000, with the Financial Rating of each, including all in the U. S. & Canada of

HARDWARE of all kinds, IRON & STEEL of every kind, TOOLS of all kinds, HOUSE-FURNISHING GOODS of every description. STOVES, RANGES, HEATERS, and all kinds of

COOKING APPARATUS, and UTENSILS, AGRICULTURAL IMPLEMENTS, MACHINES and TOOLS, of every Description, and all other articles handled by the trade.

Cloth Bound, six times size of cut.

THE USE OF THE BOOK.

THE book is minutely classified by an alphabetically arranged index, naming every article handled by these trades. For instance: If you wish to find all the manufacturers of wire fence, you turn to "Wire Fence" in the alphabetical index and it will show you all the manufacturers of wire fence in the United States and Canada, arranged alphabetically by States, and the amount of capital invested by each in the business, showing which is the largest, etc. If you desire to know who makes the "Eureka" brand of fencing, you can find it in the same way. The same applies to every article and every special kind or brand of article handled by these trades.

A subscription to the book includes the free use of our library of Directories, Reference Books, Catalogues, etc., for any information desired.

Price $5.00, Express prepaid to any part of U. S.

AMERICAN WHIP COMPANY,

FACTORY, WESTFIELD, MASS., U. S. A.

CAPACITY, 2,500,000 WHIPS PER ANNUM.

Standard Whalebone, Raw Hide and Java Whips,

In Every Style and at Lowest Prices Consistent with

A 1 Quality of Workmanship and Material.

Most Hardware Dealers Use Whips.

Many Hardware Dealers Sell Them.

Whether you buy to use or to sell, don't lose sight of the fact that the rule which applies to other merchandise applies to whips. There are good whips and bad whips. If you want a poor one you don't have to call for that kind; but if you want to be certain of getting a good one you must know who makes good ones and be able to ask your dealer for their make. You may not be needing a whip to-day, but every whip which bears our name is made right, and as we make about one-fourth of all the whips in the world, you ought not to have much trouble in finding a dealer who sells them.

STAMFORD CONN.

NEW YORK. CHICAGO. PHILADELPHIA. BOSTON. PITTSBURG. SAN FRANCISCO.

Hardwaremen's Exchange.

Notices of Help Wanted or Situations Wanted will be inserted in this column free of charge. Should not exceed Four Lines in length. Other notices, twenty-five cents per line.

Help Wanted.

WANTED—A man thoroughly posted in handling Builders' Hardware, reading specifications, taking quantities from plans, and familiar with its application to the work. Address, giving particulars as to age, experience and salary expected, Bordeaux, care HARDWARE, No. 143 Chambers Street, New York City.

WANTED—An experienced Builders' Hardware salesman. Must be capable of handling the trade through architects, etc. Address, giving age, experience and salary expected, Locks, care HARDWARE, No. 143 Chambers Street, New York City.

WANTED—Experienced salesman to represent staple line to the Hardware trade, upon commission in New York, Pennsylvania, West Virginia, etc. Address, "Business," care HARDWARE, 143 Chambers Street, New York City.

A MANUFACTURER of high grade pen knives, scissors, razors, etc., desires to correspond with six first-class Hardware or cutlery salesmen of unquestioned ability to represent him after January 1st. The line comprises the handsomest as well as the most complete of any line on the market. Unexceptional opportunity for really first-class men. Address in confidence, stating fully for whom you traveled, how long, and territory covered. Hustler, care HARDWARE, No. 143 Chambers Street, New York.

EXPERIENCED SALESMAN to travel and sell wire goods and solicit orders on iron work where necessary; state where last employed and salary expected. Address "Wire Goods," care HARDWARE, No. 143 Chambers Street, New York.

Situations Wanted.

SITUATION wanted as Hardware salesman; four and one-half years' experience in builders' Hardware, butchers' and grocers' supplies. Best of references. Address S. V. W., care HARDWARE, No. 143 Chambers Street, New York.

EXPERIENCED entry clerk and bookkeeper wants position with large concern where hard work and strict attention to business will ensure promotion and position. Has had four years' experience as a salesman in general Hardware. Address Hardworker, care HARDWARE, No. 143 Chambers Street, New York City.

POSITION wanted by an American. Age, 34. Bookkeeper, clerk or shipping clerk. Experienced in electrical supplies. Address G. F. M., care HARDWARE, No 143 Chambers Street, New York.

SITUATION wanted as Die-maker. Experienced in cutting, forming and drawing work, plain or combination. Address D. M., care HARDWARE, 143 Chambers Street. New York City.

WANTED, by a young married man, twenty-six years of age, position in wholesale or retail Hardware store. Experienced. Best of references. Address O. L. Barber. Tupper Lake, Franklin County, N. Y.

WANTED position as Hardware salesman, Builders' Hardware especially. Have had several years' experience in a first-class house. First-class references. Address Frederick J. Schwarz, No. 2 Willow Street, Brooklyn, N. Y.

Agencies for Hardware Specialties Wanted.

TO Manufacturers: A well established and pushing firm of manufacturers' selling agents of San Francisco can handle one more line of staples. Concerns wishing their business with the Pacific Coast increased may be assured of thorough and competent representation on a perfectly safe commission basis. References exchanged. Address "Pacific Coast," care HARDWARE, No. 143 Chambers Street, New York.

AN active reliable salesman, having a large acquaintance among jobbing and retail Hardware, housefurnishing and department stores in New York, Philadelphia and the South, desires a manufacturers' agency. Specialties preferred. A-1 references. Address, S. B., care HARDWARE, 143 Chambers Street, New York City.

TO Hardware Manufacturers and Importers: I want to handle on commission, in Chicago and vicinity, Hardware and house-furnishing specialties. Am a hard worker, and am well acquainted with the jobbing and retail trade. Good references. Address Energy, care HARDWARE, No. 143 Chambers Street, New York.

A BUSINESS man and salesman of twenty-five years' experience, capable and reliable, desires a manufacturers' agency—either Hardware specialties, supplies for gas, steam, water and oil, or a line of housefurnishing goods for domestic and export trade. Highest reference, given. Address Wallace, care HARDWARE, No. 143 Chambers Streets New York.

ARE you represented in Rochester, N. Y., a prosperous, wealthy growing city of 150,000, and the trading and manufacturing centre of a large section of the State? A gentleman of many years' business experience, of good judgment and well posted in commercial law, desires to represent a manufacturing, wholesale or jobbing house. Address P.O. Box 165, Clarkson, N. Y.

Side Lines Wanted.

WANTED by traveling man, long experience in New York State and Pennsylvania, Hardware specialty as side line, which will pay well for good work. Address Traveler, New Osborne House, Rochester, N.Y.

TRAVELING salesman wants A1 specialties or to represent a manufacturer or a line of goods in New England. H. Hayden, No. 667 Salem Street, Maplewood, Mass.

Side Lines Offered.

A TRAVELING salesman who sells Hardware and can handle a side line upon a liberal commission, may find a profitable business by addressing "Side Line," care HARDWARE, No. 143 Chambers Street, New York.

WANTED—Traveling salesmen, to solicit the retail trade on a staple line of washing machines, of high grade. Liberal commissions to parties with good references. Horton Mfg. Co., Fort Wayne, Ind.

EXPERIENCED salesmen wanted to sell the best garden tool on the market. Sells to Hardware and implement houses; States, New York, Pennsylvania, New Jersey, Delaware, Maryland, Ohio; also for New England States. Address Lock Box 545, Rock Falls, Ill.

WE want traveling salesmen to carry as side line direct to retail trade, on commission basis, our line of Wire Hangers for garments. Commission liberal. Further particulars by addressing Barber-Koenig Mfg. Co., No. 115 North Vine Street, Hazleton, Pa.

Business Opportunity.

GOOD OPENING—A chance for a good worker. A young man with a capital of $3000 can obtain one-half interest in a well established Hardware business, in a growing section of Brooklyn. Address V. M. C., Blythebourne, N. Y.

For Sale.

A FOUR-HORSE Power Gas Engine, in good running order; now in use by us at our stores. Edward Darby & Sons, 233 Arch Street, Philadelphia, Pa.

EXPANSION BOLTS

For Fastening all Kinds of Structure to Brick and Stone Work.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., 29 Murray Street, New York City.

Du Pont's Choke Bore.
Specially adapted for Prairie and Upland Shooting; burns slowly, strong and moist; gives good penetration with a close pattern.

Du Pont's Rifle.
For general shooting, either in muzzle or breech loaders.

"V. G. P." NEW TRAP POWDER. "V. G. P."
A new powder for Trap Shooters and others. Very regular in grain. Moist, quick, clean and strong.

Du Pont's Smokeless Powder.
Regular pattern and high velocity, with low pressure. Try it. Load same as Black Powder. Directions on every wrapper.

MILITARY POWDER AND ***GUN COTTON***
Of a quality to meet requirements of U. S. Army and Navy.

MINING AND BLASTING POWDER.

—Send Postal for Illustrated Catalogue.—

THE SCHULTZE SMOKELESS GUN POWDER CO. LTD.

OF

LONDON, ENGLAND,

BEG TO ANNOUNCE THAT THEY HAVE PLACED ON THE

American Market

Their First Shipment of

HARD GRAIN SMOKELESS SCHULTZE GUN POWDER

Which has been specially regulated in strength and moisture for the American climate.

In the manufacture of their Hard Grain powder they have embodied all the advantages that their long experience together with the latest modern improvements in powder making has shown to be the very best.

HARD GRAIN SMOKELESS SCHULTZE POWDER retains all the good qualities which have made Smokeless Schultze Powder famous all over the world, while its hard flinty grain and specially regulated moisture makes loading so easy that any amateur can now do so successfully

Variations in pressure on wads, or atmospheric conditions do not affect the shooting and loads may be varied as much as with black powder.

Hard Grain Smokeless Schultze is the most modern, the best of all smokeless powders, and excels any other Nitro powder in velocity, penetration, cleanliness, regularity and closeness of pattern.

WHAT'S IN A NAME!

Everything, when experience and reputation are behind it. So is it with a guarantee. Its value depends upon the reputation and standing of the guarantor. We guarantee our Rubber Belting in unqualified terms, and our guarantee is backed by experience and reputation. We hold this guarantee before the world, because our belting is made of first-class materials, our machinery is specially designed for the purpose, and our rigid system of inspection prevents goods that are defective, even in the slightest degree, from leaving our factory. "Warranted not to peel, open at seam nor separate between plies, and to be durable and serviceable." What's in a name? This:—

A BELT BY ANY OTHER NAME WON'T WEAR AS WELL.

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

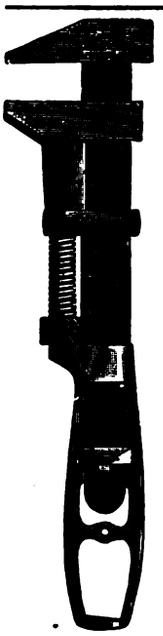
B. & W. SKATE SHARPENER.

—BEST SELLING IN THE MARKET.—

Handy to carry, does the best work, is made of malleable iron, full nickeled; the handsomest article of the kind on the market.



By its use the dullest pair of skates can be sharpened in five minutes, by any child old enough to skate.

In use, the side of the Sharpener forms a right angle with the file, making it practically impossible to file anything but a true plane on the skate, or to round the edges. As the file wears, it can be moved its full length on four sides, thus giving a great amount of filing surface. Put up one dozen in a box. Write for price.

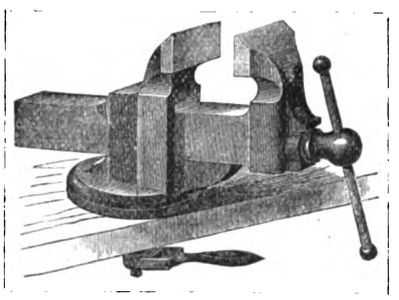
"HERE THEY ARE" BRIDGEPORT CYCLOMETERS.
Three Styles for 1895, Models "A," "B" and "C," at Reduced Prices.
Guaranteed to be Accurate, Noiseless and Waterproof.

MODEL "A" Registers 1000 miles accurately and repeats, or can be set back to zero at will. Nickel finish with celluloid dial. The figures on dial have been enlarged so that same can be read from saddle with ease. The bracket and dog have also been improved. Made for 28 and 30 inch wheels; weight, 6 ounces.

MODEL "B" has a bell attachment which rings at every mile; otherwise the same as MODEL "A." Indispensable to riders who desire to see how fast they can ride per mile. For 28 and 30 inch wheels; weight, 7 ounces.



MODEL "C" registers 10,000 miles accurately and repeats. Recommended especially to wheelmen who take long trips or enter for club mileage records; also to those who do not care to set the cyclometer back to zero. Cannot be set back to zero but repeats at the end of 10,000 miles. For 28 and 30 in. wheels; weight, 6¼ ozs.

Discounts to the trade on application. Sold by all dealers. "Keep on the lookout for our new LAMP BRACKET and new BELL."

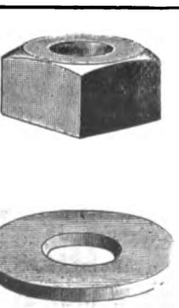
OHIO KNOCK-DOWN STOVE PIPE.

THE Ohio Stove Pipe is the only practicable, durable Smoke Proof Knock-Down Stove Pipe made that needs no directions for putting it together. The Ohio Stove Pipe's peculiar construction enables any person to easily put it together or take it apart. A number of the Ohio Stove Pipe Joints put together will make a continuous line (46 ft. long if desired) of perfectly firm, smoke-tight pipe that will not collapse.

The Ohio Stove Pipe is always shipped in crates of 25 joints of the following sizes:

4 in....per crate. 5 in....per crate. 6 in....per crate. 7 in....per crate.
4½ in.... " 5½ in.... " 6½ in ... "



Ask your jobber for this stove pipe; if he does not keep the Ohio, write us.

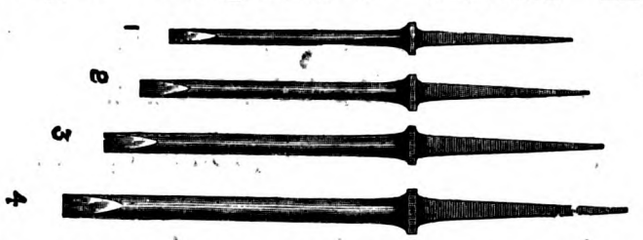
Main Office and Factories, Meriden, Conn.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.



THE

AMERICAN WICK

Made by the WICK DEPARTMENT Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

A Perfect Shelf Bracket

—MADE OF—

WROUGHT STEEL.

Light! Strong! Elegant!

PATENTED

As a result of long and careful study and much experimenting we are able to offer the trade a

STEEL SHELF BRACKET

which is far superior to anything of the kind heretofore produced, and which we believe to be a

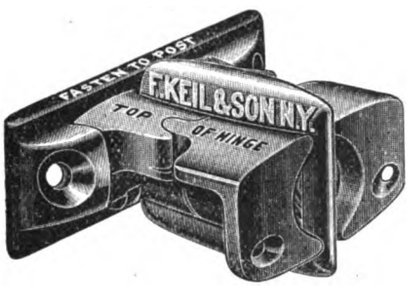
PERFECT ARTICLE!

We base our faith in these assertions on the following points of

SUPERIORITY:

1.—The use of the **arched** or **angle** forms of steel in the wall and shelf plates, which gives **much more strength** with less metal than if made flat.

2.—The **Corrugation** of the brace, which renders it secure against buckling or bending sideways under the severest strain.



The application of these principles makes a **Light, but very Strong Bracket.**

With the first number of the New Year, HARDWARE appears in a new dress, and with some changes in arrangement of matter, etc., that we are certain will commend themselves to the consideration of our friends—the great Hardware trade of America. It will also be noticed that we have been compelled to increase the number of our pages, because of the stress of news and advertising matter. Certainly HARDWARE has every reason for happiness over the record it has been able to make since it first presented its modest claims to the Hardware public. This is not so much a matter of self-congratulation, as it is one of thankfulness to those friends who as subscribers and advertisers have, from all parts of the country, recognized the need of its existence by rallying so generously to its support. To all these, and to all others to whom this greeting shall come, we desire to extend the warmest compliments of the season, and to hope that the New Year may be as promising in its outlook to them all as it is to HARDWARE. The improvements above noted are but simply the forerunners of others we hope to make during the coming year. It is the ambition of HARDWARE, as it has been from the very beginning, to make itself effective in all possible ways in the service of the trade which it represents.

The arrangements for the Annual Hardware Dinner of 1895—the time and place of which are elsewhere announced—are well under way, and if present anticipations are realized, the occasion will be one of exceptional pleasure and profit. These dinners have become a fixed feature in the Hardware trade, and it is not only a matter of personal pleasure, but also of loyalty, that each member of that trade should do everything in his power to insure success. The arrangements are in the hands of a competent committee, of which A. D. Clinch is chairman. It is specially desired that all who anticipate attending this dinner, should notify Mr. Clinch of that fact at their very earliest convenience, so that the committee will be able to go ahead as early as possible and complete arrangements.

On the twenty-second of January there will assemble in Cincinnati, Ohio, a gathering to which in anticipation, the name the National Convention of Manufacturers has already been given. Some details of this gathering, with a programme of exercises, may be found elsewhere in this issue. It is an occasion that certainly should commend itself to manufacturers of Hardware and allied lines in all portions of the country, and is but another step forward in that general line of organization of the trade which commenced some years ago, and which has been already followed by such benefits as amply demonstrate the wisdom of the movement. While this convention of manufacturers embraces all who may properly be designated by that phrase, it will be in many respects of direct application to the Hardware trade. No small degree of credit is due to the local association of Cincinnati, where this movement originated, and in the hands of whose members it has been pushed forward to a position where success is already an assured fact.

Elsewhere under the heading "Which Horn of the Dilemma?" a valued correspondent from Massachusetts presents to the trade a question which has been discussed pro and con heretofore, and which, perhaps, will be ever present when any question of practical economy in the presentation of new goods is under consideration. Our correspondent complains that in a recent communication to HARDWARE it was definitely stated that the task of creating the demand belongs entirely to the inventor and manufacturer, while the supplying of that demand after it has been created belongs to the merchant. He also quotes advice of a directly contrary character, given by a gentleman who from long experience and surroundings is well qualified to make a fair presentation of his side of the case. It is the desire of the correspondent that some one who has fully considered this question, and has, out of his own experience perhaps, matured an opinion thereon, should enlighten him as to which side is entirely right, or whether there is a golden medium lying between the two. The columns of HARDWARE are open to anyone who feels able or willing to discuss this question, and the fuller and freer the views are presented thereon, the better will it be for the information of all concerned. It does not seem to us to be a question so

Digitized by Google

much of business theory as one of fact, and those who have had experience are certainly competent to give opinions. We would be glad to hear from them.

The Promise of the Year.

Let us hope that the beautiful weather which showered its sunshine upon the threshold of the New Year, was a harbinger of that spirit now reviving, which will yet enthuse the man of business, weary as he is with two years of groping uncertainty—two years lacking too greatly the evidence of the unfaltering courage so characteristic of the American merchant and manufacturer. Let us be thankful that at last a gleam of promise illumines the gloom of the unprofitable past; that at last the electric spark of returning confidence vitalizes the prospects for the future, and reanimates the hopes which for two long years have lain so dormant as almost to know obliteration.

The forge fires again are lighted, and the inspiring sound of the hammer of Progress on the anvil of Industry is once more the sweetest music the ear can hear. Once again the looms, long silent, are set in motion; the wheels of mechanical power, which like sleeping giants, have kept the doors of Labor's temple guarded against intrusion, are again moving in harmony with the will of an enfranchised spirit which says "Look upward and onward."

Hundreds of thousands of honest toilers who have known many idle days in the year just closed, will again begin to find profitable use for their labor. Industries paralyzed by commercial stagnation will again have the breath of life breathed into their productive energies, and the hum of the battle for the reviving business of the country will end all fear of future depression, by placing every worker where he can earn the value of the labor of his hands. Hard times are unknown when the busy hustlers in the hives of labor has each his field of remunerative employment.

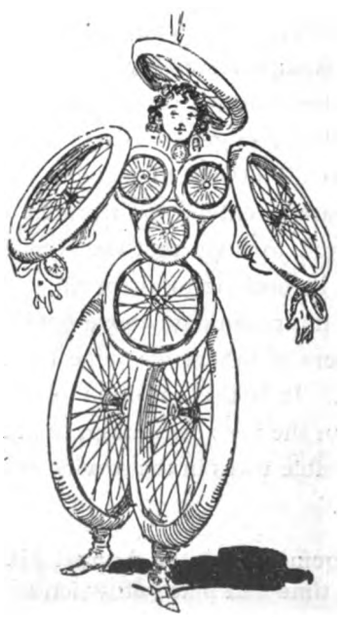
Almost every report from the centres of commerce indicates the end of apathy and the growth of confidence. Orders for future delivery in many lines of Hardware are the obvious signs of a resumption of that aggressiveness which is the crowning glory of our business system.

America is bound to fight her way this year, and it behooves foreign nations, Christian or pagan, to be wary and watchful, or we will teach the antediluvian conservatism of their methods a thing or two they may long remember.

Already have we shown by our concentrated vigor, our aggregations of capital with reorganized labor, the ability to prove that no port in the world will long be closed to the pushing products of our mills and forges. We have amplified, extended and improved our formerly extensive plants, until they are now the wonder and admiration of the manufacturing world; and nothing is too boundless for our skill to grasp or our ambition to conquer. In all the commercial nations of the globe will yet be found the manifold evidences of our manufacturing ability. The proofs of our mechanical supremacy will be felt, admired and honored more greatly than ever before in this new year of 1895.

Information comes from Dunkirk, N. Y., to the effect that the Hartford Axle Works, of Norfolk, will be removed to that city.

National Association of Manufacturers.



"You are cordially invited to attend a convention of manufacturers which will be held at Cincinnati, Ohio, January 22d, 1895, to organize a National Association of Manufacturers." This is the invitation found upon a handsome leaflet just issued by the manufacturers of Cincinnati and Hamilton county, Ohio. We have already made mention of this gathering and of its purposes, among which are the forming of a national association of manufacturers of the United States, for the purpose of considering national questions affecting their interests; the advocacy of legislation to encourage the manufacturing industries of the country; the discussion of ways and means whereby trade relations between the United States and foreign countries may be developed and extended; the establishment in South-American capitals and other desirable points of expositions for the display of American products; the extension of the commercial marine of the United States, and such other topics of like character as may be agreed upon by the convention. This convention is to be non-political, non-partisan and non-sectional,

The cheering announcement is made that such returns have already been received as will guarantee that the convention will be fairly representative of the manufacturing interests of the United States. The first question that will be presented will be the advisability of forming a national association, which main question naturally embraces the essential elementary questions of expediency, feasability and method. A vote will be taken upon these questions: "Should such an association be formed?" and "Can such an association be formed?" and if these are decided in the affirmative then will come the questions of "How formed?" and "To what end?" The programme arranged for the three days of the gathering is as follows:

Tuesday, January 22, at half-past eleven A. M.: Preliminary meeting at Odd Fellows' Temple; temporary organization; appointment of committees. Evening: The theatres of Cincinnati will be open to visiting guests with the compliments of the committee.

Wednesday, January 23, at half-past ten A. M.: Meeting at Odd Fellows' Temple; hearing and discussion of reports of committees. Two P. M.: Reception and lunch at Queen City Club. Evening, at eight P. M.: Concert and entertainment by the Symphony Club of the Chamber of Commerce.

Thursday, January 24, at half-past ten A. M.: Meeting at Odd Fellows' Temple; permanent organization; selection of headquarters; election of officers. Evening: Citizens reception and banquet to visiting delegates.

A FASHION PLATE FROM "JUDGE."

Digitized by Google

Some Annual Dinners.

The arrangements for the Annual Hardware Dinner of 1895 have been so far carried forward that definite announcement of time and place can now be made. It will occur on the evening of Thursday, January 31st, at the place where the two former dinners have been given—which is Sherry's, on Fifth Avenue and Thirty-seventh Street. It was at first intended to hold it at the Hardware Club, but as it is a trade rather than a club dinner, and as the regular club arrangements would be seriously interfered with by giving it there, it was decided best to go back to the place made use of before.

The arrangements are in the hands of an experienced and competent committee; and as Alfred D. Clinch is chairman thereof, the trade can rest assured that everything will be looked after in a careful and able manner. A circular letter has been issued by the committee which contains some points of information for subscribers. It is stated that the reception will be held from 6 to 7 P. M.; dinner at 7; tickets, six dollars each; wines *a la carte;* and that an opportunity will be given to members of the Hardware Club to obtain tickets for themselves up to January 10th, and after this date subscriptions will be open to others. Tickets will be allotted in the order of the subscriptions.

THE SUPPLEE ANNUAL DINNER.

EDITOR HARDWARE: On the evening of the 29th ult., at the Union League, in Philadelphia, William W. Supplee, president of the Supplee Hardware Co., entertained at dinner some forty of his travelling force and office staff, and the occasion was one which will long be remembered by those who gathered around the social board. An elaborate and bountiful repast was attacked with evident gusto.

Mr. Supplee, contrary to his usual custom of making his remarks of a social character only, on this occasion embraced much of business, and propounded some questions relative to employer and employee, which sooner or later will confront every business man, and become an almost vital subject. His remarks were listened to with rapt attention, and there can be no doubt that the seed sown will bring forth at no very distant date fruit an hundred fold.

Around the board were noticed some who have been associated with Mr. Supplee for over a quarter of a century, which speaks more eloquently than words of the satisfactory condition of affairs existing in the house. Some thirty travelling men were present, who cover every State and Territory almost from the Atlantic to the Pacific, and the Lakes to the Gulf, and office men sat side by side who have never been in any other employment but that of this company and its predecessors.

Each guest at the table was given an opportunity to ventilate his views and theories, and some of the remarks were in the nature of orations.

This is the third banquet given by Mr. Supplee, and as far as the feelings which have always existed are concerned, this last has cemented them more firmly than ever. It was indeed good to be there, and the good will shown by all present must certainly be a great source of gratification to Mr. Supplee. As the dial marked twelve o'clock good nights were said by all, and the dinner of '94 passed into history, but its recollections will remain forever in the memories of those who were fortunate to participate in its pleasures. ONE OF THE GUESTS.

Philadelphia, January 3, 1895.

W. H. BELKNAP & CO.'S DINNER.

The wholesale Hardware firm of W. B. Belknap & Co., Louisville, Ky., conceived the happy idea of giving their traveling salesmen and heads of departments a dinner as a fitting close to the year's work and as a mark of appreciation of their services, and, accordingly, they were dined some nights since at the Pendennis Club. Forty-one sat down to the dinner and sandwiched informal speeches between courses. The previous afternoon the travelers and members of the firm held a conference at the Galt House, and talked over business. The firm's new catalogue has just been prepared, and instructions were given regarding it.

AN ATLANTA BANQUET.

The annual banquet of the Beck & Gregg Hardware Co., Atlanta, Ga., occurred on the evening of December 23d, in one of the private dining-rooms of the Aragon Hotel. When the last course had been served, L. H. Beck, the president of the company, who acted as toastmaster, made a short but appropriate address, in which he gave a history of the firm and of the company succeeding it, from its foundation down to the present day. One signifioant fact brought out in his address, was that all of the officers had worked their way up from the bottom round. The business was started twenty-nine years ago, on a borrowed capital of $4000, on which a business of $30,000 per year was done. To-day the company have a full paid-up capital of $150,000, and are doing a business of a half a million dollars a year. The speaker paid a handsome tribute to the traveling men, and attributed the success of the business in a large measure to the harmony that had always existed between the officers and their employees. Informal speeches were made by John W. Milton, R. T. Semmes, John Chambers, J. Harden, Will Parker, A. W. Kennedy, Sam Clark and others. The only thing which marred the pleasure of the evening was the absence of W. A. Gregg, the secretary and treasurer of the company, who was seriously ill at his home on Capitol Avenue. It was decided to omit this annual gathering because of this fact, but when Mr. Gregg heard of the proposition he would not listen to it for a moment. The following resolution introduced by A. W. Kennedy, and adopted by a rising vote, shows something of the high estimation in which Mr. Gregg is held by his associates and employees:

"*Be it Resolved*, That while the occasion has been one of enjoyment and pleasure, we unanimously deplore the absence of W. A. Gregg, and that the occasion has lost its brightest member, and that while on his bed of sickness, he has the prayers and heartfelt wishes of his fellow workers for his early recovery, and further usefulness to his friends and his associates and the city of Atlanta."

Active Business Half a Century.

The firm of Allen & Noble commenced the Hardware business at No. 10 Washington Street, Boston, and on January 1st, 1895, completed fifty years of active business life. Both gentlemen are now living. At the time the firm was started that city had a population of less than 100,000, and most of the Hardware was imported. Not a State or city official then in office is at present living. The Hardware houses of that day were Homes & Horner, Lane & Reed, Alexander H. Twombly & Co., James Butler, Proctor & Butler, West & Parkman, Charles Brook & Co., M. C. Warren & Co., Dodge & Vinal, John Bradford, J. B. Eaton, George N. Gray & Co., Z. Hosmer, Charles Scudder & Co., Fairbanks & Loring, T. W. Walker & Co., J. Parke, Joseph Lincoln, W. H. Barnes, A. J. Johnson, A. J. Wilkinson, Smith & Brother, T. P. Barnes and others.

A Huge Engine.

An enclosed compound Green engine of 2,000 horse power, and an economic development 1,600 horse power, has been ordered by the Washburn & Moen Mfg. Co., Worcester, Mass., from the Providence Steam Engine Co. The high pressure cylinder is 26 inches in diameter, and the low pressure cylinder 50 inches. Both cylinders have a 48-inch stroke. The belt will be 80 inches wide and one inch thick. This huge machine is intended to replace the Corliss engines that have been in use in the long Grove Street mill since 1868.

"Hop's" Corner.

I was in a well known Hardware store a few days ago, when a package at that moment was deposited by an expressman, having been returned by a Western customer who had ordered more goods than he needed, and, not seeing the justice of keeping the overplus had "fired them back," as the dealer expressed it, "without justice, equity or common sense."

"Do you take back goods in this purely philanthropic manner?" I asked the dealer, "for you undoubtedly lessen the anxiety of mind of the customer, who can return and charge back to the manufacturer or his agent all his idiotic errors, and almost make his buying so easy that a boy of sixteen could run his department."

"Oh, well," the dealer said, "you have to submit to just such injustice every day in the week: we know it's wrong in inception and practice, we all have apparently inflexible rules which permit 'no goods to be returned unless we are first consulted with,' but what are you going to do about it? Take this case for instance. Out of $300 worth of goods he returns this $17 worth, claiming 'it's no trouble for us to take them and place them again in stock,' forgetting, or pretending to forget, that they were made to order, in a special finish, which we never carry in stock; then, again, instead of returning them in the original packages (so that if they were regular they could go in stock), they came back without the screws which originally accompanied them; without the tissue paper they were wrapped in as well; and they are even returned in boxes belonging to goods furnished by one of our competitors, and this is the ridiculous part of it. But competition is so strong we submit to the inevitable. They are credited with handling all of our line of goods they can, so we must humor their whims, and we console ourselves with the knowledge of a number of instances where our closest competitors have submitted to the same arbitrary abuse of business courtesy and thanked the god of traffic that the circumstances were no worse."

One of these days the strong hand of independence will throttle this conscienceless departure from strict business methods and close the accounts of those who persist in such reprehensible practices; but the volume of business must become larger than at present before this stiffness of backbone becomes visible.

Old John, Peter McCartee's illustrious porter,
Was removing the *debris* one day, as he'd "oughter;"
When a man stopped and asked if "Mr. Stanley was in?"
"No! but I'm Mr. 'Works'" said old John with a grin.

It's amusing to notice the amount of originality daily expended in christening the different specialties of American production with a taking title, usually devised for popular prestige, in the interest of judicious advertising.

Stoves have burned for years to lead the way to fame and popularity, and have had fabricated for the purpose a long range of gorgeous appellations that apparently exhaust all known sources of application. Lawn mowers have since their birth taxed the invention of man and woman to supply suggestive cognomens, and as they suggest how essential it is to push these articles into popular use, Webster's Dictionary has been well thumbed in this pursuit; every purchaser of twenty-five machines desiring to christen the selection, frequently a high sounding name permitting an additional profit. New bicycles come to the front, and the factories are ransacking ancient and modern history for fetching names. Some of them have reached round after round of the ladder of fame, and although too *tired* to do much more than *wheel* into line with a metrical head line, every effort is made to accomplish that much.

A great deal depends on the success of a campaign of expensive advertising, that the article or specialty has a good trade mark, or anyhow a good catch line in connection with it; then push it right and left until the public come to know its sound. An original or suggestive trade mark, for advertising purposes alone, is worth twenty-five per cent of the expenditure, and ought to command that value in the market. It should have undoubted reasons for its existence, indicating something; and the metrical harmony necessary to lead to a train of thought in connection with it should be a potent factor in its construction. Then follow it up by a campaign of educational advertising, and the future will be full of results.

John, the lunchman at "Hollender's," frequently makes
For a German-American, the oddest mistakes,
When a customer ordered "a half shell, just a few;"
His friend said he "guessed *he* would take *oysters too*."
What do you think John brought this gourmand to attack?
Why a dish of *stewed* oysters too fine to send back!

"Hop."

Heavy Hardware Jobbers' Union.

The Heavy Hardware Jobbers' National Union held a meeting in the Southern Hotel, St. Louis, Mo., on December 21, 1894. The principal object of the gathering was to allow the exchange of views regarding matters interesting to this branch of the Hardware trade. The union as a whole declined the invitation of the National Hardware Association to join this new organization. Each individual member may, however, join the new association. The members of the union were the guests of the St. Louis Association, at a banquet at the Mercantile Club. Thirty covers were laid. The officers elected for 1895 are as follows:

President, S. D. Kimbark, Chicago.

Vice-presidents, Gaius Paddock, St. Louis; Francis Boyd, Milwaukee, Wis; W. B. Dean, St. Paul, Minn.

Treasurer, Robert E. Brier, St. Louis.

Secretary, Charles T. Brace, St. Louis.

Executive Committee: J. J. Parkhurst, Chicago, Ill; C. R. Blake, St. Louis; Robert Donahue, Burlington, Iowa; George Deming, Cleveland, Ohio; J. J. Slattery, Louisville, Ky.

The next meeting will be held in Louisville, Ky., March, 1895.

Burlington's New Establishment.

John A. Manson & Co. have recently opened one of the handsomest and best arranged Hardware stores in the country, on Church Street, Burlington, Vt. The head of the house, John A. Manson, has had his business education in a most excellent school, and is built of the material which commands success. He was several years with George I. Hagar, one of the oldest and best known Hardwaremen in Burlington, and afterwards travelled for eight years for Tower & Lyon, New York. His route lay all over the South and West. Since his decision to go into business for himself Mr. Mauson has made a study of the arrangement of stores, and has embodied in his own establishment the best features of them all. He is live, energetic and pushing, aud it is needless to prophesy that the new venture will be crowned with an abundant success.

A hog has been killed at Whitpain, Pa., in the stomach of which was found a heterogeneous mixture of Hardware and junk, comprising nails, screws, rivets, hooks, an umbrella ferrule, a cartridge shell and seventeen bits of lead, tin and copper on which the pig had exercised its bicuspids. In all there were 137 pieces. The pig weighed when dressed 180 pounds, and showed no evidence of having suffered from stomach trouble.

Porter to Partnership.—IV.

When the drummer of to-day starts out after trade with his valise of samples in his hand, he feels something as I did the day I got into the wagon and started for Germantown. The expedition was my own idea entirely, so that if it failed I could not divide the failure with anyone. My plan was to inaugurate a weekly visit, when I would collect butter, eggs and cheese, and anything else the settlement might have to sell and pay them either in goods or in orders on the store for cash; even if they came in for the cash it would be worth a great deal to get them into the store.

It was a pleasant day and my hopes rose with the ride, so that by the time I reached the first house in the settlement I was in good spirits for trade. I drove up to the gate and hitched my horse, while one of the windows was soon full of faces watching me. Mr. Guggenheim opened the door as I went in the gate and gave me a "wie gehts" in answer to my "good morning." I was pretty well acquainted with all the settlers here, so I proceeded at once to business.

"Have you any butter or eggs for me to-day, Mr. Guggenheim?"

"Butter an' eggs? You want some?"

"Yes, sir; I am coming around every week for such things, and will pay you just the same as we do in the store; or if you like better I will bring you groceries for them next week."

"Yah, I will see." He called out the good wife and they spoke together in German; then they brought out a pan of butter and a few eggs. I weighed and counted what they brought me and then tried to get their order for some goods to be brought out the next week, but it all ended in my giving them an order on the store for the amount of the produce in cash.

At the next house I was successful in getting an order for goods for their produce. Some of the people looked on me with considerable suspicion, and wondered why I did not bring the cash along with me, but with these I called in some one who knew me and I got their stuff. As a result of my day's work I carried back a very good load of produce, some good orders for goods to bring with me the next week, and I had opened trade with several families whom we had never sold before.

On the next Saturday the people with the cash orders came in, and there was none of them but did some trading with us before they left the store. The next time I went out I had goods to deliver, and I came back with a good batch of orders for the week following. Mr. Ely considered my experiment a decided success, and when the new store started we were sure of the trade in the German settlement.

The new merchants started as if they were going to run out of trade every other store in town. They brought some of the city enterprise with them that one could see at a glance were capital ideas, but they also had some notions that were entirely out of place in the country. The store was arranged with great taste and so that everything was convenient for the salesman; the country was flooded with glaring hand bills calling attention to the new store, and staples were quoted below cost, but Mr. Ely had been ahead of them here. He reasoned that they would surely cut down prices, first because it was natural for a new firm to do it, and next because we were selling staples at what was a fair profit, while in the city where these men had been living staples were sold at cost or less. Then he said that if he was to cut down prices first many people in the country would give him the benefit of the decline, while if he waited until the new store was running it would be said he was forced to come down by the new men. So we anticipated their opening and circulars, and sent out ours, cutting prices down to the quick. The new firm went a little below us on some articles, but not enough to attract attention, and we could not say after they were started that we felt their competition at all.

One day I was standing at the depot waiting for a coming train, when I ran across the senior of the new firm, Mr. Haricot. He seemed very cordial, and after a few minutes' talk asked if I had made any engagement with Mr. Ely for any specified time. I told him I had not. Then he said he would give me an increase over any salary I might be getting if I cared to leave Mr. Ely and work for him. It seemed to me it was a very mean way of doing things between two merchants, but I simply said I was well satisfied with my position at Mr. Ely's, and should not care to change. I never mentioned this incident to Mr. Ely, but when, at the end of the year, he gave me fifty dollars more than was due me I was tolerably sure that he had heard of it from some one.

That fifty dollars was the beginning of my bank account: Mr. Ely told me to do just what I pleased with it, and mother said she did not need it; I determined at first that I would buy a watch with it; then I concluded I would have the "nobbiest" suit of clothes in the town; then I changed my mind and was about to start a private library with it, but I was talking to Mr. May about books and he said something that decided me to put it in the savings bank.

"Don't begin to invest very heavily in the purchase of books just yet, Mark," said he; "if you are able to save a little money don't put it where you cannot get at it; the day may not be far off when a little ready money will be the making of you; open a savings bank account when you have five dollars saved, and you will feel like adding to it whenever you can; then if you need your money it is where you can get it."

We had no savings bank nearer than the city, but a few days after this Mr. Ely sent me down there to pick out some groceries, and I opened an account in the savings bank there. I felt myself quite a capitalist as I rode home.

For the next three months I was tolerably busy. Mr. Ely caught a severe cold that settled on his lungs, and for twelve weeks he could not come near the store. Mr. May came in every evening and we made out orders for goods together, but during the day I had to shoulder the entire responsibility of the business. Fortunately it was not a time of year when farmers were selling much of their products, and when it came to selling our goods I was nearly as well posted as was Mr. Ely. In ordering goods I was without any experience whatever; Mr. Ely had always done this without consulting me, unless to ask about stock on hand. So I made all our orders very light in order to be on the safe side, and the result was that when Mr. Ely was able to come to the store we were very low in goods. After he had time to look the stock over he decided it would pay to go to New York and lay in a good line of goods, and he determined, too, that I could do the work there as well as he, so he told me to get ready. No one but a clerk who "has been there" can realize my feelings as I carried this news home to my mother. I was so happy I slept but little that night.

Franz Siegler, a Hardware merchant of Birdseye, Ind., became convulsed with laughter over the joke of a friend and could not be quieted until he had burst a blood vessel. Death was almost instantaneous. Siegler was a bachelor of a jovial disposition, and was famous for miles around for his laughter.

A cutler displays a combination knife and fork for the use of persons only having one arm. It is a small knife, the blade shorter, but wider, than usual. The blade is turned up at the end, and there are three prongs.

An ingenious spirit in Alsace, has, it is claimed, invented a remarkable bicycle, which is operated wholly by the rider's weight. It is naturally considered "one of the finest inventions yet found in the bicycle world."

Indiana Wire Fence Co.

In a souvenir edition of the Crawfordsville, Ind., *Journal*, just at hand, we find an illustrated description of a manufacturing concern that long since secured a high position in that branch of the Hardware trade to which it belongs. This is the Indiana Wire Fence Co., whose works are shown below, and concerning which the *Journal* says:

The position occupied by the Indiana Wire Fence Co. in this community is such that in compiling the commercial, manufacturing and other interests of Crawfordsville, our work would be but imperfectly executed were we to omit mention of this establishment—one adding as it does by solvency and solidity, by experience and reliability, great credit to the city of its origin. It has become a potent factor in the commercial interests of the city, and the company has, in the fourteen years of business, had no reason to feel other than well pleased with the business, as it has been attended with great success. Their plant has been added to, and now a large, brick building, covering almost two acres, is used wholly as factory, offices and storage rooms of this immense concern, all necessary parts of the one great entirety. They manufacture barb wire, wire nails and fence staples, and their products have met ready sales wherever they have been offered. It has a splendid trade; has met in competition in the large cities all the different kinds of barb wire, and finds as many favoring it as any other make; at least so many want it that they have not succeeded in making the supply equal to the demand. In order to more nearly do so, the company have just been enlarging and adding some valuable improvements to their plant, will put in new machines and employ more helpers. The barb wire is made of steel wire, sold both in painted and galvanized. The main wire is two strands with the barb twisted so it is held secure, a fencing wire that answers every purpose, is light, has strength and durability. Their nails and staples are also good sellers, not surpassed in quality by anything put on the market. The Wire Fence Co. deal in plain wire, lawn and ornamental fencing, the Eureka Post Hole Diggers and the Elwood Wire Stretcher. These agencies have been accepted only after the articles after a severe test have been declared meritorious.

The officers of the Indiana Wire Fence Co. are: C. M. Crawford, president; O. M. Gregg, secretary and treasurer. These will be recognized at once as two of the moneyed men of the city, both closely identified with her interests, ever ready to lend their influence and capital to sustain enterprises calculated to advance local prosperity.

PLANT OF THE INDIANA WIRE FENCE COMPANY.

Columbia Desk Calendar.

For ten years the desk calendar issued by the Pope Mfg. Co. has held an unique place among business helpers. Each daily leaf during that time has taught its quiet lesson of value of better roads and outdoor exercise, and especially the benefits of bicycling. The calendar for 1895, which is just issued, is even brighter than its predecessors in appearance, as clever artists have added dainty silhouette and sketch to the usual wise and witty contributions that have heretofore given this popular calendar its charm. It can be had for five 2-cent stamps from the Pope Mfg. Co., Hartford, Conn., or from any Columbia bicycle agency.

Tower & Lyon, No. 95 Chambers Street, New York, have become sole agents for the Gwinner Mfg. Co., of Hamilton, Ohio. The manufactures of this last named company are well known, having been presented to the trade through the columns of HARDWARE continuously for several years past.

Ignatz Koblitz, Cleveland, Ohio, has commenced suit for $8000 damages against the Grasselli Chemical Works, located near his store. He alleges that the fumes from the works injure not only his health, but also do constant and continuous damage to his stock.

Fifth Annual Dinner of Sickels, Sweet & Lyon.

The annual dinner given by Sickels, Sweet & Lyon, No. 35 Barclay Street, New York, to their employees on the evening of December 27th, proved a most enjoyable affair. Covers were laid for about forty guests in the ladies' dining-room of the Hardware Club. The tables were tastefully decorated with smilax, and candelabra with red shades spread a pleasant glow over the assembled company. The menu did credit to the hospitality of the popular firm:

Oysters, Puree, Chantilly Consomme
Celery Olives Radishes
Filet of flounders, Joinville Potatoes duchesse
Filet of beef larded, Madeira sauce
Potatoes chateau Stuffed peppers
Bouchees of sweetbread a la reine
French peas
Punch Alaska
Roast quail on toast, chicory salad
Plum pudding, hard and brandy sauce
Neapolitan ice cream
Mottoes Fruits Assorted cakes
Cafe Cigars

The assemblage were honored by the presence of several ladies, Mrs. Simpson, a daughter of Mr. Sickels, and Mrs. and Miss Sweet being in attendance. They occupied a small table in the centre of the room. Messrs. Sickels, Sweet and Lyon were all present, as were Mr. Simpson, Mr. Sickels' son-in-law, William H. Williams, president of the Hardware Club, and E. L. Hulbert, of the Cortland Door & Screen Co., of Cortland, N. Y. It was a merry gathering, and one and all enjoyed themselves hugely. When the coffee and cigars were brought in, Mr. Sickels introduced Mr. Williams, who responded to the following effect:

"I feel honored by the kind invitation to attend this dinner, extended to me by Messrs. Sickels, Sweet & Lyon, and I thank you all for your kind attention. I have met the majority of you in business, and hope to meet you many more times. I think it is a good thing for the members of a firm to meet their employees occasionally, as it creates a better feeling between them and makes a better business team."

When the ladies arose it was a signal for the party to break up; some went into the library to finish their cigars, and others went home. This is the first of these dinners given at the Hardware Club.

Hardwaremen "On The Bowery."

Despite Lexow committees, despite the wave of reform that has struck this city, and despite the lament of the men who lived in the "good old days," that New York "ain't what it used to be," the people on that world-famous thoroughfare, the Bowery, still continue to "do such things and say such things," and William F. Hubinger will bear witness to the fact, that the lot of a Bowery Hardware merchant is not always a happy one.

Mr. Hubinger's establishment is at No. 350, and his thirty-five years' experience on that remarkable street, would lead one to believe that he was thoroughly acquainted with all the characteristics incident thereto. His latest and most lasting experience, however, has convinced him that experience does not count for much, and that the dear old Bowery constantly has one or two tricks up its sleeve that will astonish even the oldest resident. Mr, Hubinger says it was like this:

"I was closing my store Friday evening, December 21st, when two men came in and asked to see some shovels. After selecting one, and bargaining for the price, instead of pulling out the money to pay for it, they pulled out pieces of iron pipe incased in garden hose, and struck me two heavy blows on the head, which dazed and almost stunned me. My cries of Murder! Police! frightened the toughs to such an extent that they ran out and slammed the door." Mr. Hubinger's wounds were dressed at a drug store. He is sixty-seven years old, and only his vigorous constitution prevented his injuries proving more serious. He made no complaint to the police because, as he says, he has lost faith in them since his house was robbed of considerable silverware and a sum of money which he had to pay his taxes with, some three weeks before the unpleasant experience at his store. Another feature peculiar to the Bowery was brought out in a conversation with Mr. Hubinger—he says he does not have a large trade in firearms, as the average Bowery youth prefers to make all such purchases in the pawn shops.

Goods Stolen En Route.

Quite a large number of jobbers in this city are aware to their sorrow, that a condition of affairs exists in the wholesale trade which should be quickly investigated and changed. Merchants and Hardwaremen especially have looked into the matter, and are anxious to put a stop to the system of wholesale robbery and pillage to which they have been subject, under the abuse of the powers of the Interstate Commerce laws. A. H. Saxton, of Alfred Field & Co., No. 93 Chambers Street, was interviewed by a HARDWARE reporter as one qualified to give information on the subject, the firm of which he is a member, having suffered heavily. He said: "For the last three or four years, and especially since the operation of the Interstate Commerce law, which allows the opening of packages for the purpose of ascertaining if the classification is correct, there has been going on a system of petty thieving on most of our transportation lines. I can, of course, only speak for Hardware dealers, but I have heard that other trades suffer in a like manner. We are positive that the goods are stolen by the employees of the transportation lines, as we have had detectives watch those of our own employees whom we thought might be able to steal the articles. The boxes or cases are opened from either the top or bottom, and small quantities of goods taken from the inside coverings or paper boxes. The cases are opened with such cleverness that there is hardly any evidence of their having been tampered with. The thefts have generally been small, but in some cases they have reached close upon a hundred dollars. Our firm has suffered considerably. Two cases containing a dozen knives valued at $10, were sent to Milwaukee, and the empty boxes were returned to us, the knives having been stolen en transit. Another case containing ten dozen knives was sent via the Delaware & Lackawanna Railroad to a house in Pennsylvania. When the case reached its destination, the house refused to accept it, as it contained only straw. Applications for redress are treated with supreme indifference, and almost rudeness, by the officials of the transportation companies. There is some talk among the merchants of forming a mutual protective association, and out of a common fund bring suit against the transportation companies for all thefts traced to the companies' employees."

The Sickels, Preston & Nutting Co., Davenport, Iowa, have issued as a Christmas souvenir a very handsome series of art studies, in copper etchings from recent paintings. They are six in number, and measure 11x14 inches, are printed upon very heavy paper, and tied together by a red knot. The pictures presented are reproductions of famous oil paintings, and are printed upon the very heaviest cardboard, and finished in a very highly artistic manner. The souvenir makes a very handsome Christmas present, and reflects credit upon the well-known house by which it has been issued.

Manager Osgood, of the Keating Wheel Co., Holyoke, Mass., has devised a unique guide for those who are unfamiliar with the names of the different parts of a modern bicycle. The picture shows a dissected Keating; every part numbered and named. Send for it.

A Jersey Hardwareman's "Fad."

EDITOR HARDWARE: The Rev. Hunter Hoon is a meek little man, and like many rural divines adorns himself in short trousers and large gaiters. While these articles are accepted the world over in almost irrefutable proof of an abiding innocence of mind, they do not, it must be admitted, add to that reverence which the clerical wearer has a right to expect from even the ungodly sons of New Jersey. Without this endorsement of clothes, however, Mr. Hoon would be picked out as a meek man, and he certainly can be browbeaten out of countenance upon the thousand and one things which come up in the talk of daily life. But there is one point upon which not even his wife, sharp and overbearing as she certainly is, can stir him from the high platform of ministerial dignity. He has a reverence for the Cloth, and is determined that all men shall reverence with him. He draws it about him in his official character, wraps himself up within it as it were, and is determined that those about him shall duly respect it, however little they may care for the meek old gentleman within it.

It was this high purpose of mind that gave him courage the other evening to gently chide his leading official, Deacon Buttles, a retailer of Hardware in our neighborhood, as they walked away from Little Silver toward their homes in the fair moonlight of the early winter night.

"My friend," said he, as he placed his hand upon the Deacon's arm, "we all love to see you arise in our gatherings for prayer, and we allow you to verbally browse around, as it were, in about all the fields of thought that a churchman has a right to enter, but there is one of them regarding which my duty to the Cloth compels me to call a halt. I am the minister here, ordained and duly installed in accordance with the rules of the church. I cannot and I will not have you encroaching upon my premises and interfering with my theology."

"Why, parson," stammered the surprised Buttles, "I'm the last man on this earth ——."

"Yes, yes, I know you would not do it by intention, or from any motive of ill will. But you must impress this upon your mind: I teach my people here that when they are once dead and buried they are done with the things of earth, and have beyond all question gone to happiness above or punishment below; and I won't have you disturbing their minds by suggesting a possibility of return by means of a lot of pulleys and switchboards and insulators and monkey-wrenches and cranks. Earth to earth, says the good book, and when a man gets into this warm and comfortable red earth of New Jersey under my helpful administrations, he must stay there. How can I be consistent, or any of us orthodox, if he does not? I don't care how much you interfere while the doctor and the undertaker have things within their charge, but after they are officially turned over to *me* I want you to let them alone."

"Certainly, most certainly, Brother Hoon, I may have referred to the question of premature burial once or twice, but I shall be careful—very careful in the future. But that reminds me of an instance I heard yesterday. A cooper over in Middletown was thought to be dead, and they shaved him and laid him out and put ice under him ——."

Then, with a firm grip upon the arm of the now helpless little minister, the good deacon walked him on and on, down past his own door, and at least a mile and a half upon the Long Branch road and home again, telling him premature burial stories all the way.

The above truthful incident introduces Ironmonger Buttles and the queer trend of mental action which has marked him as odd among his fellows. He is one of the cheeriest, happiest persons in New Jersey, and yet he is continually talking about the chances of being buried alive.

Not with a morbid view, for he is one who cannot touch any theme, however dark, without shedding a ray of his personal sunshine upon it. He discusses this gruesome question in all seriousness, and with the air of one who has not only given it considerable study but regards it worth studying. He certainly has not imbibed it from his occupation, as he is the most cheerful ironware seller in New Jersey. He was never buried alive, and no friend of his ever suffered such experience. Nor is it a matter of recent suggestion, for to my personal knowledge he has harped upon the one string for fully fifteen years.

I asked him once: "Deacon, why talk so much about it?"

"Do I?" he responded in innocent amazement. "Do I say more about it than other men? Well! well! I mention it now and then because it happens to strike me, that's all."

He had one of his strokes then. He was burdened with a long and ghastly story of a supposed dead man who was locked away in the family vault, and nearly severed his hand from his arm in breaking the glass of the coffin lid, and almost bled to death before the cemetery watchman heard his cries. I recognized it immediately as the bold romance of some Frenchman, but he gratefully took it all in as the truth.

Returning to my investigations, I asked: "Do you talk of these things because you are afraid? Have you any provisions in your will as to the tests which must be made upon your own body before it can be committed to the earth?"

"Afraid!" he echoed, with the same old innocent look. "Why, I never thought of it! No, I am not more afraid than other men. Do you know of many fellows who have such provisions in their wills?"

He has been known to spring a question as to the percentage of premature burials on the clergyman who came to the house to celebrate his daughter's marriage. He elicited the somewhat tart response from the surprised clergyman that "while he had performed the final rites over some fourscore of people, not one of them, thank Heaven, had come back to complain of the proceedings or hint at irregularities."

He nearly drove the doctors of New Jersey crazy years ago, and now, when one of them sees the good deacon marching down the street, covered with smiles and loaded with burial statistics, he goes around a ten-acre block rather than meet him. He has been known to haunt the Red Bank lock-up for hours, for the chance of talking with a man arrested for robbing a cemetery; and actually offered the prisoner a chance for work when his time was up, which the fellow very discreetly refused, because he was not anxious to spend his leisure hours in discussing a point about which he had reason to be sensitive.

About a year ago he had a New York lawyer make a search of the patent office records to discover what inventions there were by which the resuscitated body in the coffin could notify the friends upon earth that it was ready to return to the walks of life. It cost him a little sum, but he paid it willingly. He worked for some months upon an invention of his own by which the buried and revived could touch a button, or turn a knob, or pull a handle, and make noise enough to wake the permanent sleepers about him: but the lawyer told him there was no money in it, and advised him to send his model to an undertaker's museum and leave it there.

As the Rev. Hunter Hoon said to me only yesterday: "Can any student of occult things, any philosopher of a mortuary turn of mind, any student of the minor manias, tell me why Brother Buttles' simple and childlike mind should have taken this mouldy turn; why an innocent purveyor of Hardware should harp in season and out upon this ghastly string?" I was compelled to give it up.

A JERSEYMAN.

LITTLE SILVER, N. J., Jan. 5, 1895.

The Dean Linseed Oil Co., No. 181 Front Street, New York, are sending their friends a handsome morocco wall calendar case, with cards for each month of the year. It is a neat and attractive souvenir of the holiday season.

Arms for the New York Militia.

General Curtis, of New York, is trying to have the militia laws amended by striking out many provisions that have stood since 1792, when the first militia law was established. If the New York citizen-soldiery should ever appear equipped as the existing statutes compel them to, a wide smile would spread over the State from Gardner's to Grand Island. Instead of the modern and familiar equipment which the boys in blue really do have, read what the law compels them to have. Section 1628 of the Revised Statutes reads: "Every citizen shall, after notice of his enrollment, be constantly provided with a good musket or firelock, of a bore sufficient for balls of the eighteenth part of a pound, a sufficient bayonet and belt, two spare flints, and a knapsack, a pouch with a box therein, to contain not less than twenty-four cartridges, suited to the bore of his musket or firelock, each cartridge to contain a proper quantity of powder and ball; or with a good rifle, knapsack, shot pouch, and powder horn, twenty balls suited to the bore of his rifle, and a quarter of a pound of powder, and shall appear so armed, accoutered, and provided when called out to exercise or into service, except that when called out on company days to exercise only, he may appear without knapsack, and all arms, ammunition, and accoutrements so provided and required shall be exempted from all suits, distresses, executions, or sales for debt or the payment of taxes. Each commissioned officer shall be armed with a sword or hanger and spontoon."

First Sportsman's Exposition.

The First Sportsman's Exposition to be given in May, 1895, from the 13th to the 18th inclusive, at the Madison Square Garden, under the auspices of the Sportsman's Exposition Association, promises to be of great interest to the trade and the sporting world generally. The chance to see and learn about the latest devices in sporting appliances will be unequaled, as the exposition will be one of the finest of its kind ever seen in this country. The official connection of such men as Charles Tatham, J. A. H. Dressel and Frederic S. Webster, with the affair, is a guarantee for its success. The following firms have been allotted space up to date, and will make fine exhibits:

Winchester Repeating Arms Co., Hartford, Conn.
Bridgeport Gun Implement Co., Bridgeport, Conn.
United States Net & Twine Co., New York.
Gas Engine & Power Co., Morris Heights, New York.
Union Metallic Cartridge Co., Bridgeport, Conn.
Cleveland Target Co., Cleveland, Ohio.
Spratt's Patent (America), Limited, New York.
Forest and Stream Publishing Co., New York.
Freed Optical Co., New York.
Von Lengerke & Detmold, New York.
Schoverling, Daly & Gales, New York.
E. I. Dupont de Nemours & Co., Wilmington, Del.
Cushman & Denison, New York.

A Sign.

One of the first things that a manufacturer or merchant does when he goes into business is to put out a sign, so the public can locate him and know what goods he deals in. This is justly looked upon as a necessity. Following the thought a little further, what is an advertisement but a sign? —a traveling sign going regularly before buyers, just as traveling salesmen do, only where a traveling salesman can visit tens, a traveling sign or salesman visits thousands. In point of fact, each supplements the other. The traveling sign introduces the goods of the traveling salesman; the traveling salesman follows up and enforces the work of the traveling sign. The traveling salesman sometimes cannot get the attention of the buyer; the traveling sign is always waiting and reaches the buyer's attention when he has time to read and think. If merchants appreciated their opportunity and the mine of wealth lying before them, when intelligently worked, they would run after publishers, seeking an oppartunity to place their signs before the people, instead of publishers running after them and soliciting them to advertise.—*American Grocer.*

Phosphor-Copper and Bronzes.

Phosphor-Copper and Phosphor-Bronzes are being more and more extensively used. The peculiar change which copper and bronzes undergo when fluxed with phosphorus are not well understood, but the effects are fully appreciated, strength and toughness are increased and liability to corrosion decreased. For these reasons Phosphor Bronzes are being used very largely in marine and railway construction. The charging of the phosphorus into the molten metal must be done with considerable system and care. This part of the operation may be safely and easily accomplished by the aid of phosphorus chargers or phosphorizers made of plumbago. The Jos. Dixon Crucible Co., Jersey City, N. J., who make plumbago goods in great variety for metallurgical purposes, also make these phosphorizers in different sizes, suited to the size of the crucible in which the fluxing is to take place.

A Change of Name.

At a meeting in Wheeling, W. Va., of the stockholders of the Junction Iron Co., some days since, important action was taken. This company recently purchased the interest of the Laughlin Nail Co. in the Laughlin & Junction Steel Co.'s works at Mingo Junction, and the new acquisition led to a change of the company's name and an increase of the capital stock. The directors were authorized to apply to the Secretary of State for the right to increase the capital from $400,000 to $600,000, and to change the name to the Junction Iron & Steel Co. The company, with this new property, will be one of the most extensive in the country, and with enlarged facilities will give Mingo quite a boom in a business way. The future plans of the new company have not yet been given out definitely, but it is understood that specialties as well as nails will be manufactured.

They Handle Crawford Wheels.

The Crawford Mfg. Co., No. 72 Reade Street, New York, with factories at Hagerstown, Md., have demonstrated to their entire satisfaction that the Hardware trade is greatly interested in bicycles. The following list of their agents is a positive demonstration of that fact:

Bigelow & Dowse Co., Boston, Mass.
Stauffer, Eshleman & Co., New Orleans, La.
Simmons Hardware Co., St. Louis, Mo.
Sharpleigh Hardware Co., St. Louis, Mo.
Julius Andrae, Milwaukee, Wis.
Wier & Wilson, Baltimore, Md.
Farwell, Ozmun, Kirk & Co., St. Paul, Minn.
McIntosh-Huntington Co., Cleveland, Ohio.

Colonel George Pope Succeeds His Brother.

A change will take place in the make-up of the executive board of the Pope Mfg. Co. early in the new year, brought about by the resignation of E. W. Pope, the company's treasurer. Mr. Pope has filled the position of treasurer for nineteen years, and during that time applied himself with ceaseless energy in advancing the interests of the company. His retirement is due to his disinclination to work as hard as he has in the past. He will still be a member of the board of directors, and will take a great interest in the business. Mr. Pope is a well preserved man of about fifty years, with a pleasing open countenance, and a magnetic character. His brother, Colonel George Pope, will succeed to the treasurership of the Pope Mfg. Co., and will also continue as president of the Hartford Cycle Co.

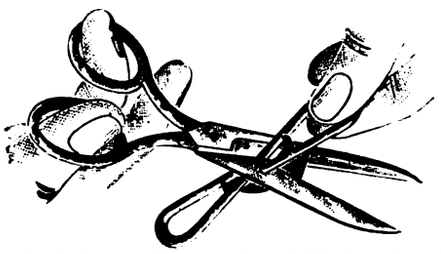
NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.

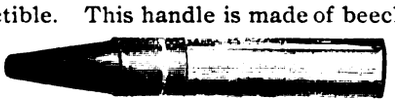


NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

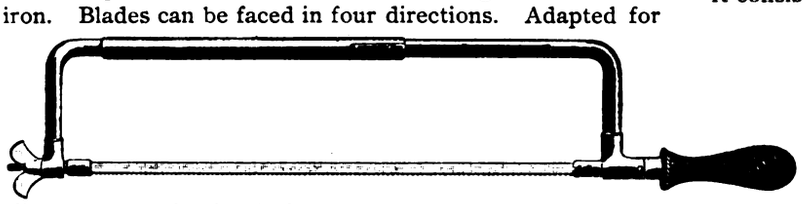
"Handy" Scissors Sharpener.



David Eastman, No. 64 Reade Street, New York, is placing upon the market the "Handy" Scissors Sharpener here shown. It is described as "based on sound mechanical

principles, and made by skilled toolmakers." The method of operation is described as follows: Open the scissors wide, place the centre of the bar of the Sharpener between the blades close to the rivet, with the sides of the scissor blades against the two ends in centre of Sharpener. Be careful that the blades rest on the centre bar, between the ends, before closing the scissors; otherwise they will not be sharpened. Cut the centre bar, and at the same time draw the scissors entirely off the Sharpener, firmly pressing the sides of the blades against the two ends all the time; repeat until sharp, ending with light strokes. The best results will be obtained by slightly oiling or greasing the blades. When once sharpened, a few gentle strokes will suffice to keep them in order." Prices, etc., will be sent upon application.

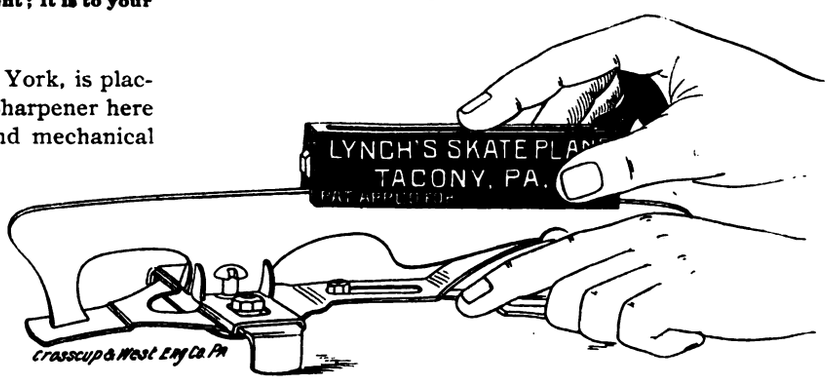
Phippen's Indestructible Chisel Handle.



The Phippen Co., No. 160 Salem Street, Lawrence, Mass., are placing on the market a Chisel Handle that they claim is indestructible. This handle is made of beech wood, with

a heavy brass band enclosing 3½ inches of its length. The wood at the top is left exposed to the blow, in such a manner as to give a combined strength of wood and metal sufficient to resist the heaviest blow." All information can be had by addressing the Phippen Co.

Adjustable Hack Saw Frame.



The Amidon Tool Corporation, Nos. 1445 to 1451 Niagara Street, Buffalo, N. Y., are placing upon the market an Adjustable Hack Saw Frame. This frame holds blades from 8 to 12 inches in length, and is "readily adjusted, very stiff, light in weight, and handsome in appearance, is made of the best tempered steel, seamless steel tubing and malleable iron. Blades can be faced in four directions. Adapted for

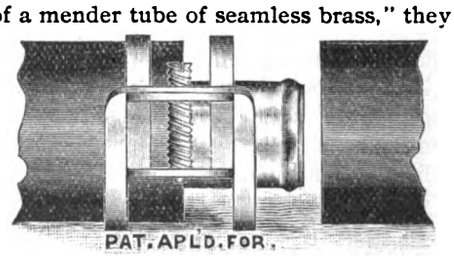
all purposes and suitable for cutting iron, steel, brass, bone, etc." For prices and further information address the Amidon Tool Corporation.

Lynch Skate Plane.

The illustration here given shows a Plane for sharpening and concaving skate runners, patented by Wm. B. Lynch, Tacony, Philadelphia. It consists of a hollow frame of iron of a shape to easily fit over a skate or runner. There is a ledge or shoulder at each inside upper end of the frame, against which rests a small four-sided file, held in position by a set screw. The file has one convex and three flat surfaces. The Plane is placed on the runner of a skate, held

runner uppermost on a board or edge of a table, and the full length of the runner from heel to toe is planed in the ordinary manner. It is claimed that "the plane will concave a runner as well as giving a square surface, and will do away with the use of an emery wheel or grindstone." The plane is neatly nickel-plated, and retails for twenty-five cents.

New Seamless Milk Can Neck.

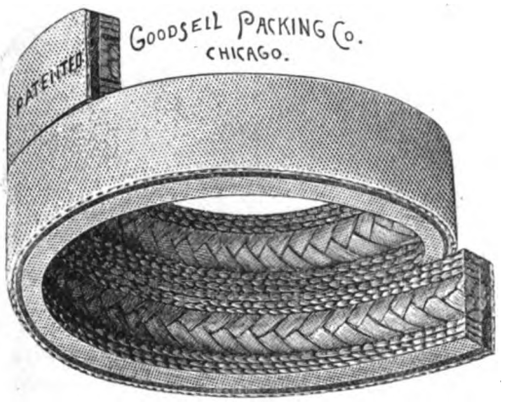


The Chicago Stamping Co., Congress and Green Streets, Chicago, Ill., are manufacturing a Seamless Milk Can Neck. The manufacturers claim for this neck many advantages: "There are no seams to solder or to come unsoldered; it is

always of one size and fit; there are no edges or joints to rust; no bowl to work loose; strengthens the weakest part of a can; is perfectly smooth inside and out. This neck is made of heavier material than pieced necks, and open hearth steel is used exclusively, in order to secure can stock proof against cracking."

Double Clinch Hose Band and Mender.

The Clayton & Lambert Mfg. Co., Ypsilanti, Mich., are offering to the trade the Hose Band and Mender here shown. "It consists of a mender tube of seamless brass," they say,



"which is placed inside the hose, and a double metallic band with a brass set screw. The brass tube is easily adjusted, giving a full opening for the waterflow, and does not rust. The screw cannot be detached from the band, which can be removed and replaced any number of times. The

Digitized by Google

screw never becomes set by rust, and a knife or screwdriver are the only tools required to mend a hose with." The makers also claim that the Mender is light, strong and easily affixed, and that it may also be used to fasten couplings, nozzles and other hose fixtures. The Menders and Bands are made in ½, ¾, 1, 1¼ and 1½ inch sizes. Samples and price will be sent free by the manufacturers.

Goodsell's "Dollar" Packing.

This packing is designed for piston-rods, pump-plungers, etc., and consists of a combination of braided flax and

woven duck, the whole being supported by a rubber cushion placed behind the weaving surface. The grouping of these materials in this way, the manufacturers claim, is "the best for the purpose and the cheapest. The flax acting as a reservoir for oil and moisture, is supported by a firmer material upon either side, both being kept in contact with the rod by regulating the gland. Made in coils 15 feet long in sizes from ⅜ inches to ¼ inches." It is manufactured by the Goodsell Packing Co., No. 20 West Lake Street, Chicago, Ill.

American Knife Sharpener.

The Mossberg Wrench Co., Attleboro, Mass., are offering a Knife Sharpener, as shown in the illustrations here given. Fig. 1 shows how a knife is sharpened, and Fig. 2 how the Sharpener is used when a pair of shears are sharpened. The

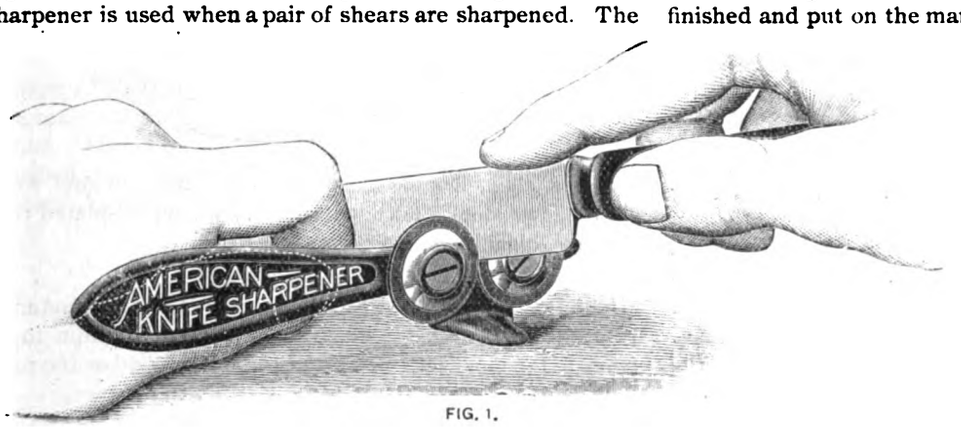


FIG. 1.

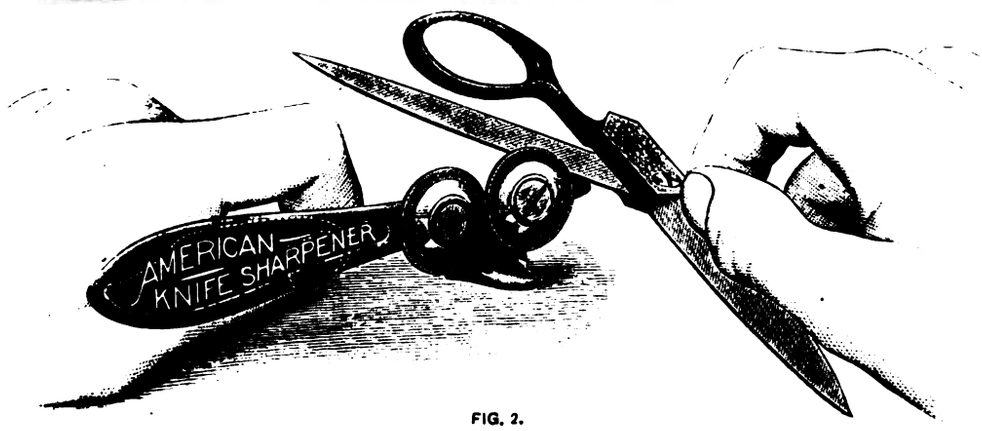

FIG. 2.

essential feature, as claimed by the maker, is the "butting up together of the steel washers, making the two edges of the cutters directly opposite each other, and that do not overlap. The steel washers may be revolved to present new cutting surface, by loosening the screws." The manufacturers also state that a razor edge may be given to knives. Shears are sharpened by using the projecting end furthest from the handle to rest the blade on. The company furnish the Sharpener nickeled, japanned or tinned, also in silver and silver-plate.

New Window and Door Screens.

Those veteran screen makers, the A. J. Phillips Co., Fenton, Mich., who have originated a great many of the best

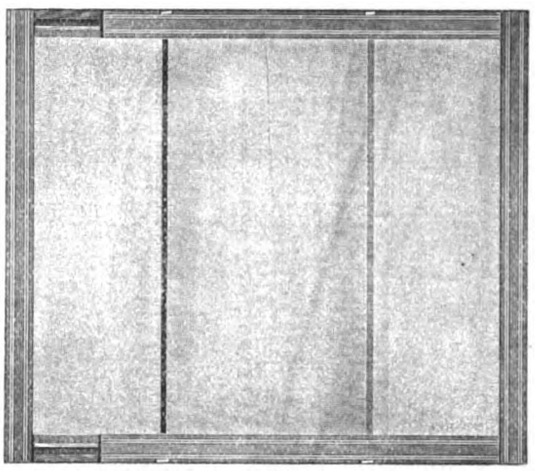

FIG. 1.

patterns of Wire Screens which are now so generally used, are again on deck the coming season with something new. They have a new Window Screen bearing the very suggestive name of "Flyer" (Fig. 1.) In this screen they claim that their object has been "to do away with centre bars and sideboards, which in most screens have been used for securing adjustment, and eliminate particularly all obstructions to the view, and to make as nearly as possible, a screen like the high priced solid screens which are made up to order." The goods are to be made from hardwood, finely finished and put on the market for high grade screens. The

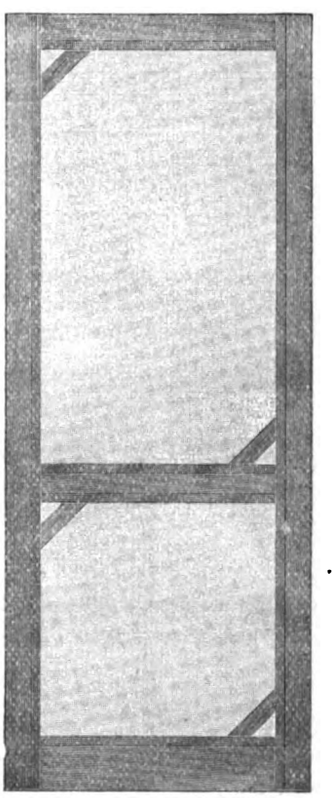

FIG. 2.

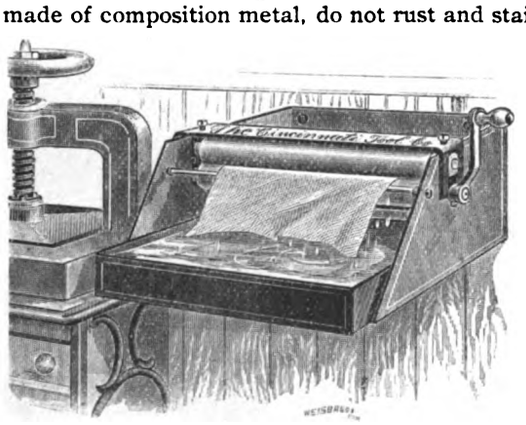
screen will be protected by patents. The Standard Oil Pattern Screen Door (Fig. 2) is produced with a view of making a very low priced fancy Screen Door in natural finish. The pattern is modest and neat. The A. J. Phil-

Digitized by Google

lips Co. have a high reputation for good work, and have met with great success in supplying the trade. Full particulars as to these goods and others will be gladly sent by them to any who are interested.

Stropine: A Razor Dressing.



The Stropine Co., No. 62 Purchase Street, Boston, Mass., are placing upon the market Stropine, a razor strop dressing. They declare that by its use a razor can be kept sharp,

and that it "will sharpen the dullest razor, giving a smooth cutting edge; will keep it sharp without honing. Warranted not to injure the finest razor." They further recommend it "for surgical instruments, penknives, ink erasers, and all tools requiring a razor edge." The directions for use are: Scrape off the old dressing, and apply a good coat of Stropine. Rub well into the strop, making a smooth surface. Strop well; finish by using plain leather side. The accompanying illustration shows the method of packing so that the article can be well exposed for sale. A strong pasteboard box, about eight by twelve inches in size, holds a dozen packages of Stropine, securely held by wires, and making a neat and attractive display. The manufacturers will be pleased to send information, prices, etc., upon application.

Perfection Blotter Bath.

The Cincinnati Tool Co., Cincinnati, Ohio, are offering the trade a new Blotter Bath, for use in copying correspondence, invoices and general office work. The makers claim that "this bath can be attached to a table or to the wall; the water pan is removable, light and easily cleaned. The bath is made of the best galvanized iron, and the boxes, being made of composition metal, do not rust and stain the

cloths. The bath is nicely finished, the arch being nickeled; the rollers are of the best solid white rubber." List price, $10 each.

New Mincing Knife.

A. S. Henn & Co., manufacturers of light Hardware, New Haven, Conn., are placing upon the market a new Mincing Knife, illustrations of which are here given. Fig. 1 shows the single blade, and Fig. 2 the double blade mincing knife. The manufacturers claim "that the band or support of steel forced around the wooden handle not only strengthens

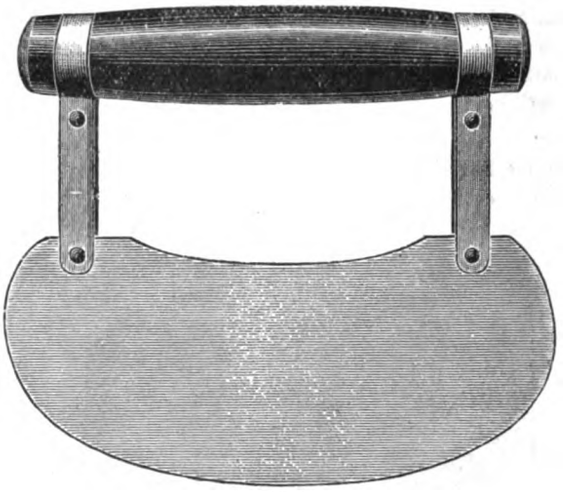


FIG. 1.

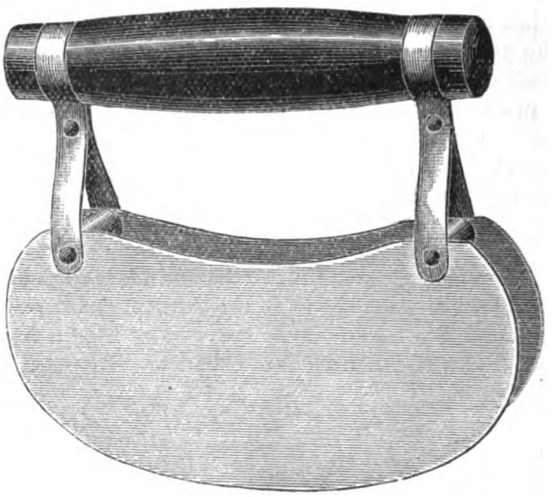
it, but prevents the handle from cracking, and makes it impossible to come off." These knives are made with nickel-plated tips or fully nickel-plated. The prices are: Daisy Mincing Knife, enamel wood handle, steel blade, per gross, $19.88; nickel-plated tips, per gross, $24; full nickel-plate,



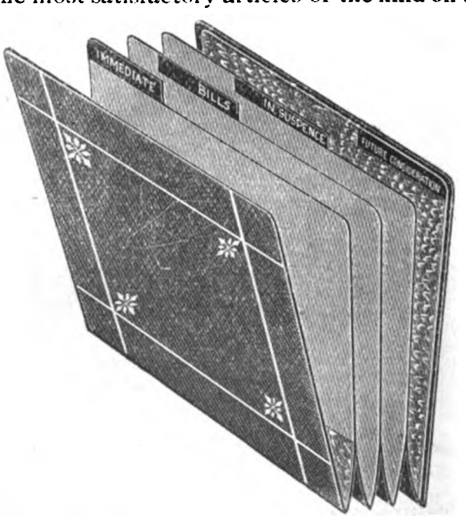


FIG. 2.

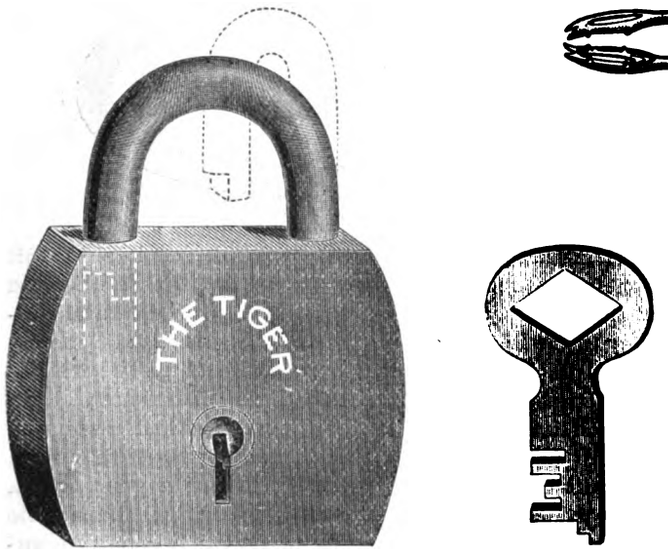
per gross, $34; Double Daisy Mincing Knife, enamel wood handle, two steel blades, per gross, $30; nickel-plated tips, $34; full nickel-plate, per gross, $42.50.

A Portfolio Rack.

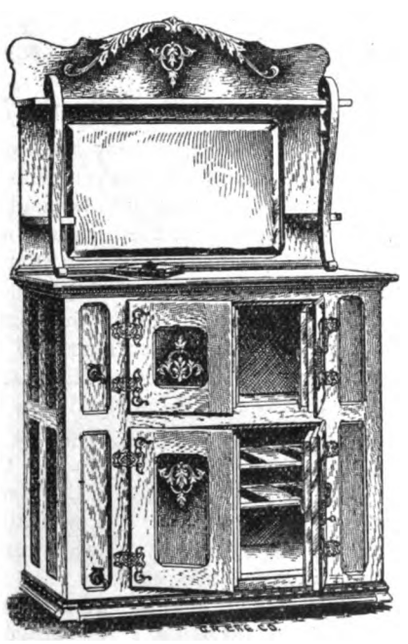
The Peoria (Ill.) Printing & Stationery Co. manufacture a Portfolio Rack as here illustrated, which they claim to be "one of the most satisfactory articles of the kind on the mar-



ket." It is substantially made, 6x10 inches in size, and will expand to a thickness of six inches. Some of its advantages as enumerated by the makers are: "It classifies all papers.

Digitized by Google

Keeps your desk clean. Keeps correspondence from curious eyes. It is very accessible and neat in appearance. It will last for many years, being made of the best material. The time and trouble it will save you will pay for a dozen. It is divided into compartments marked Immediate, In Suspense, Future Consideration, and Bills and Statements. The price is $1 delivered."

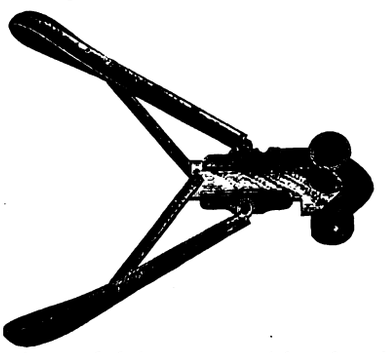


The "Tiger" Padlock.

The illustration here given shows the "Tiger" Padlock, manufactured by the Miller Lock Co., Frankford, Philadelphia, Pa. The manufacturers claim that this lock "is cheap, strong and attractive; made of steel or brass. Each lock has two brass tumblers, and two plated steel keys, of a good shape and thick enough to be substantial. Packages contain one-half dozen, with six changes. The figure on each lock shows its change; twelve changes are available." An examination of a sample "Tiger" sent us, shows that the claims of the makers are fully carried out.

New Sideboard and Refrigerator.

The Grand Rapids Refrigerator Co., Grand Rapids, Mich., whose Leonard Cleanable Hardwood Refrigerators are known wherever ice can be handled or made, are placing upon the market a new No. 34½ Sideboard and Refrigerator combined. It is in all respects described as being arranged and finished in the high state of perfection to which these refrigerators have attained. It is made in solid oak highly polished, and has a beveled plate-glass mirror 18 x 30 inches in size. It has also a water-cooler with an opening in the deck of the refrigerator, which prevents the drinking water from being contaminated by flavors from the food. There is a tank to retain the drippings inside the refrigerator, obviating the necessity for a drip pan. We are permitted to illustrate this new article in this connection, and information as to prices, etc., will be gladly furnished upon application to the company at the address above named. The company inform us that their line of Sideboard Refrigerators is very complete, and that the styles are all new for this season.



Reimer's Pig Forceps.

Reimer's Perfection Pig Forceps here shown, are supplied to the trade by Hibbard, Spencer, Bartlett & Co., Chicago, Ill. They are described by the makers as "superior to all others, and noted for simplicity and strength." These forceps are made of malleable iron, nicely finished in tin, and are 19½ inches long. "They sell themselves wherever shown," says J.N. Reimers, the manufacturer, Davenport, Ia.

The Simplex Lead Pipe Cutter.

The Simplex Lead Pipe Cutter, illustration here given, is made with a blade of tempered steel ground to a sharp point, with keen edges. A slight pressure suffices to puncture the pipe, after which in the progress of the cut, the blade cuts entirely from the inside outward, thereby not crushing the pipe and doing away with reforming the ends of the pipe. The manufacturers claim that "this method is superior to sawing, as it leaves no chips in the pipes to endanger the valves and faucets." For sale by the manufacturer, Robert D. Wardell, No. 1359 W. Jackson Street, Chicago.

"Sensible" Sash Balances.

N. R. Streeter & Co., Groton, N. Y., are offering the Sash Balance herein illustrated. The manufacturers state "that the peculir construction used in this balance enables it to take care of a variation of four or five pounds in the weight of a sash, instead of two pounds, which is considered the limit. It runs smoothly, because the bearings and points of contact are milled, and there are no rough surfaces working against each other. The brake is rolled steel working against turned iron, and cannot be tightened sufficiently to buckle the tape, nor will increased tension break any part of the balance." Fig 1 shows the "Sensible" balance. Fig 2 a rear view of the same.

O. J. Faxon & Co.'s Line For '95.

O. J. Faxon & Co., Nos. 3, 5 and 7 Appleton Street, Boston, have announced their line of "Puritan" High Grade Bicycles for this season, and permit us to present some points concerning the same, as follows: "We intend," they say, "to place on the market for the coming season a line of fine wheels. Our model 'G' will be a full road wheel weighing 25 pounds, for general riding and touring purposes. Our model 'H' will be fitted as a road racer, weighing 21 pounds, high frame, large balls in the bearings and thoroughly up to date as a wheel for the average club man or the rider of experience, to be used over all reasonable roads and under all reasonable conditions. We guarantee it to be right up in front every time. Our ladies' wheel, with special mud guards of our own design and make, weighing 25 pounds, for ladies, used under all conditions, and a tandem weighing 40 pounds, built on the most advanced lines of design, to be a powerful machine and a fast one; and last, but not least, our special two-speed wheel the 'Hill Climber.' (See illustration.) This wheel can be geared to suit the taste of the rider, and it can be geared from 63 to 72 for riding on level roads, and by touching a lever the gear can be instantly changed without dismounting from 45 to 56, as the case may be. At this low gear it is a very easy matter to climb the steepest hills that one may meet in touring. The great advantages of this wheel may be readily seen, as there will be no more walking hills, particularly with the ladies, to whom hill climbing is a great tax. By the use of this two-speed gear the average rider is enabled to ride a much higher gear than he would ordinarily for level road riding, feeling that he has a reserve for hill climbing constantly at hand. This device is very simple in its action, adding but about one pound to the weight of the machine, and is thoroughly protected from dust by an aluminum case that fits closely around the gear."

The entire nail plant, including engine room, packing room, warehouse, rolling mill, nail factory and machine shop of the Van Alen Brothers, Northumberland, Pa., was totally destroyed by fire on December 29th. The loss is estimated at $100,000; partly covered by insurance. Forty thousand kegs of nails were burned. The Van Alen mill was built in 1865, and has run continuously. Two hundred and fifty hands are thrown out of employment.

The partnership between Harry W. Tufts & E. Herbert Skinner in the Snap & Tool Co., Attleboro, Mass., was dissolved on December 28, 1894, by the withdrawal of Mr. Skinner. The business will be continued under the same name by Mr. Tufts.

The Moore Bolt Works, Hartford, Conn., have increased their hours of labor to nine hours a day and six days a week. The mill has been running short hours for some time.

The League Tire.

The illustrations here given show the League Tire, manufactured by the New York Belting & Packing Co., No. 15 Park Row, New York. Fig. 1 shows the tire inflated. Fig. 2 shows it deflated. The makers state that up to the present time, all inner-tube tires, of the cemented variety, have been made in molds. "In vulcanizing under this process a very high pressure is used, which stretches and weakens the fabric, driving the rubber into its meshes and depriving it of its natural elasticity. The inevitable result is the loss of resilience. In the League Tire we offer the trade and the cycling public a tire in which the natural elasticity of the fabric is unimpaired. It is vulcanized by an improved process that prevents injury to the fabric. There is no stretching, straining or weakening during manufacture. With extreme lightness it combines a durability and a strength hitherto unattainable. Further improvements, due to the method of manufacture, are the absence of any mold mark or fin on the tread, which mars the appearance, and in some degree increases the friction, and a cloth impression surface on the under side next the rim, to which the cement adheres better than to a smooth surface. Add to these advantages, rubber and fabric of superior quality, workmanship the best at our command, a beautiful silkiness of texture, and a pliability never before seen in a pneumatic tire, and you have a correct description of the League."

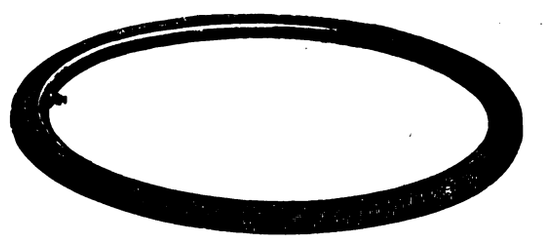

FIG 1.

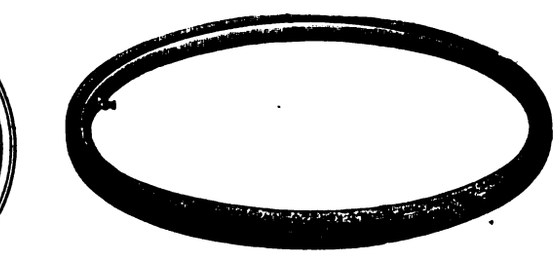

FIG. 2.

Which Horn of the Dilemma?

EDITOR HARDWARE: I notice in your issue of December 10th the experience of a Hardware buyer, who declined to handle a certain lock until there should be made a demand for that lock, which would cause the furniture men to come to the Hardware jobber and ask for it. In that letter I find these quotations: "To create a demand belongs to the inventor and manufacturer. To supply the demand after it has been created belongs to the merchant." I also find an address delivered by John H. Clark, of Nashua, N. H., at a recent meeting of the New England Hardware Dealers' Association, in which he takes exactly opposite grounds. I wish some person who is well posted upon this subject, would tell me how one can comply with the ideas advanced in both of these cases and introduce a new article. Awaiting a ray of light upon this subject, I beg to remain,

Respectfully yours,

Athol, Mass. A MANUFACTURER.

Fayette R. Plumb, Philadelphia, has been recently elected one of the vice presidents of the Union League Club in that city.

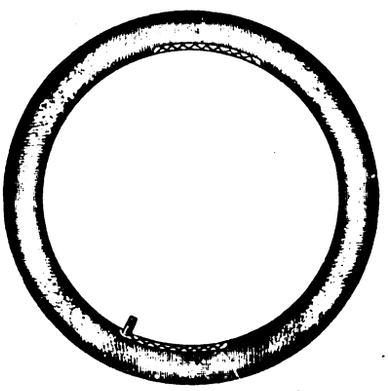
ILLUSTRATED BICYCLE NOVELTIES.

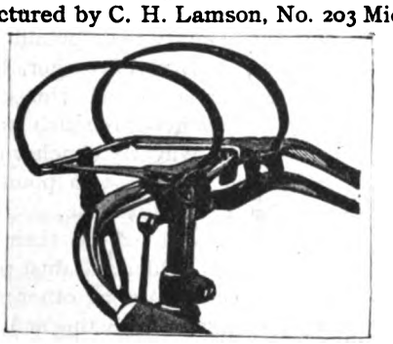


MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

Flexifoit Pneumatic Tires.

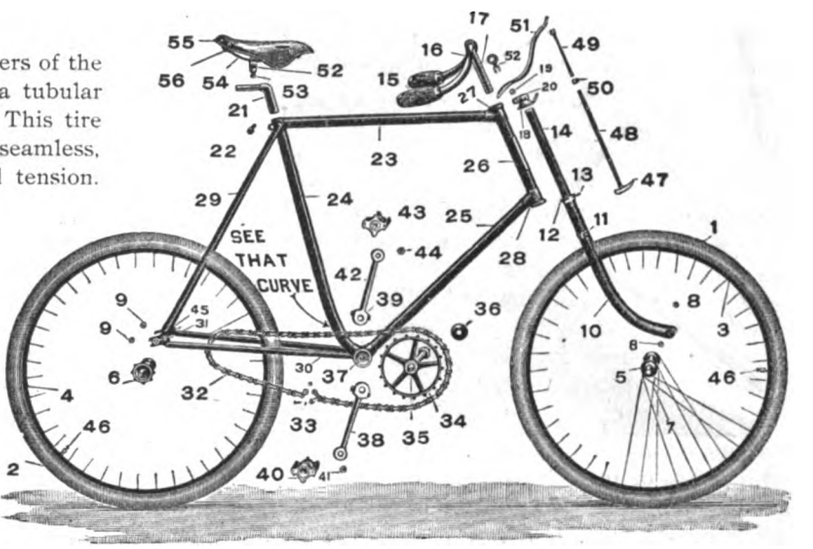


The method of weaving used by the manufacturers of the Flexifoit possesses the constructive qualities of a tubular tire lining, woven in a circle, so they claim. "This tire grips the wheel tightly when inflated, and is light, seamless, and so woven that all the strands sustain an equal tension.

It is perfectly uniform in size throughout, and is not subjected to a molding while undergoing vulcanization. The fabric is made of Sea-island cotton, and the air tubes of fine Para rubber. The tire is provided with two openings so that the air may be removed one-half at a time." These tires are made in four weights, A, B, C and D, varying from 1½ to 3 pounds per pair. For prices and particulars apply to the manufacturers, the Mechanical Fabric Co., Providence, R. I.

Lamson's Luggage Carrier.

The illustrations following show Lamson's Luggage Carrier, manufactured by C. H. Lamson, No. 203 Middle Street,



Portland, Me. The manufacturer states that "these Carriers can be easily attached to any wheel, are light, and do not interfere with use of the brake or lantern. Students or

tourists using the wheel will find the carrier of great use." First figure shows Carrier No. 1, price $1. Second figure, Carrier No. 4. Double; price $1.50.

A Dissected Keating.

The illustration here given shows a Dissected Keating, Keating Wheel Co., Holyoke, Mass., in which all parts are numbered. The object of this cut is to enlighten those who are not familiar with the names of the various parts of a wheel.

THE DISSECTED KEATING.

1. Front tire.
2. Rear tire.
3. Front rim.
4. Rear rim.
5. Front hub.
6. Rear hub.
7. Spokes.
8. Front axle nuts.
9. Rear axle nuts.
10. Front fork side.
11. Coasters.
12. Front fork crown.
13. Fork crown detachable brake bracket.
14. Steering post.
15. Cork grips.
16. Handle bars.
17. Handle bar stem.
18. Lamp bracket.
19. Handle bar collar screw.
20. Handle bar binding collar.
21. Saddle post.
22. Saddle post-binding screw.
23. Upper brace.
24. "See that Curve" centre brace.
25. Lower brace.
26. Steering head.
27. Upper head ball case.
28. Lower head ball case.
29. Rear upper brace.
30. Rear lower brace.
31. Chain adjusting screw.
32. Chain.
33. Chain bolt and nut.
34. Front sprocket.
35. Crank axle.
36. Sprocket adjusting cone.
37. Crank hanger or bracket.
38. Right crank.
39. Crank pin.
40. Right pedal.
41. Right pedal adjusting nut.
42. Left crank.
43. Left pedal.
44. Left pedal adjusting nut.
45. Mounting step.
46. Valve.
47. Brake spoon.
48. Brake telescope tube.
49. Sliding brake rod.
50. Brake binding screw.
51. Brake lever.
52. Brake lever binding collar.
52. Saddle post clamp.
53. Saddle binding screw.
54. Saddle spring.
55. Saddle top or leather.
56. Saddle adjusting nut.
57. "See that Curve?"

The company claim that the curved seat post designated in the illustration as 24, places a rider in the most advantageous position over his work. The idea of this Dissected Wheel is an excellent one, and a study of the diagram and explanations will be instructive.

Two New Lamps.

The illustrations here given show two new Bicycle Lamps manufactured by the Snell Cycle Fittings Co., Toledo, Ohio. Fig. 1 shows the Flashlight. Fig. 2, the Tom Thumb. The Flashlight, the makers claim, is mechanically constructed to burn kerosene oil, and the wick does not char.

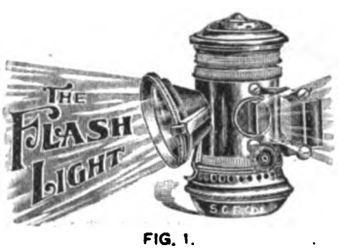


FIG. 1.

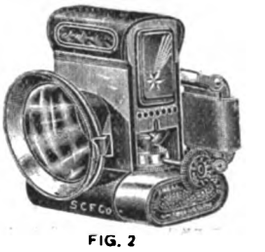

FIG. 2

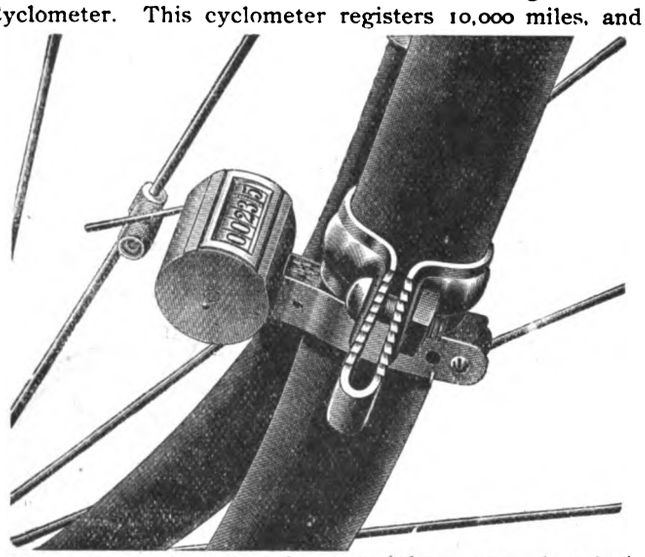
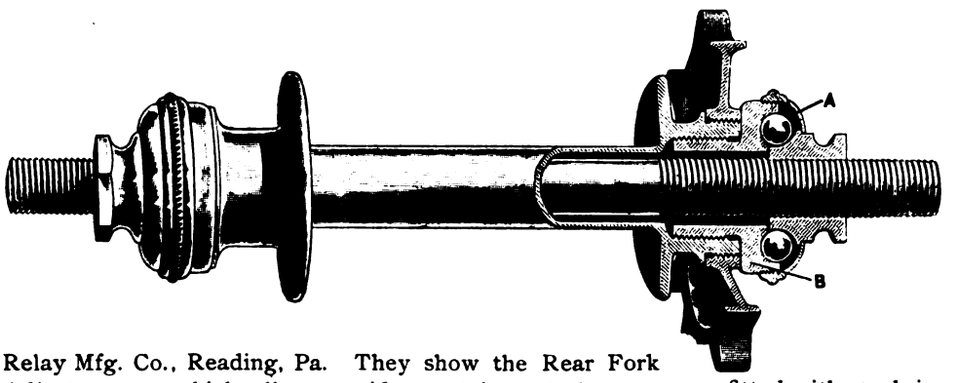


This lamp has a cold air chamber which prevents it from getting hot, and is fitted with a highly focused lense and ruby prism sidelights. Made of brass, full nickel-plated, is strong and very handsome in appearance, and weighs only 11¼ ounces. The Tom Thumb, it is stated, is fitted with a

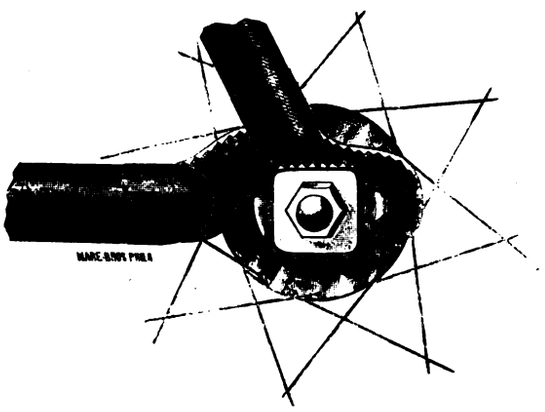
Digitized by Google

powerful optical lense, beveled ruby comet side lights, and improved spring back. The body of this lamp is made in two pieces securely riveted together, and is simple in construction, strong and handsome, and weighs 11 ounces. Prices furnished upon application to the company.

U. S. Cyclometer.



Bean & Lang, of Fond du Lac, Wis., are offering the U. S. Cyclometer. This cyclometer registers 10,000 miles, and



repeats, or may be set back. It weighs 1 ounce, is 1 inch long and ⅞ of an inch in diameter, and also registers the tenths of a mile. Every meter is run at least 400 miles on a testing machine, at a rate of 60 miles an hour, before being put out.

Two Relay Improvements.

The illustrations given here show two of the improvements that will be found on the '95 machines offered by the

Relay Mfg. Co., Reading, Pa. They show the Rear Fork Adjustment, "which allows a rider to take out the rear wheel without removing the chain, and the Rear Hub, with new removable dust cap, which allows the rider to see the balls while in motion, and enables him to put oil on them

direct, and thus cause any dirt which has accumulated to run off, leaving them perfectly clean, yet well oiled. It also does away with the unhandy oil cup in centre of the hub. If a ball breaks the pieces will fall out, and a new one can be put in very easily." These improvements, the manufacturers state, "will of course be appreciated by riders."

Chicago Bicycle Show.

THE OPENING OF THE GREAT WHEEL EXHIBIT.

SOME OF THE FEATURES THAT ARE ATTRACTING ATTENTION—THOSE WHO ARE THERE AND WHAT THEY ARE SHOWING.

If activity in the way of preparations count for anything, the Cycle Show, which was formally opened at Battery D on Monday, January 7th, will be the largest exhibition of this character ever held in the country. The sound of the hammer and saw had not ceased when a representative of HARDWARE visited the large halls on the lake front, Saturday the 5th. Everything was found in good shape. A large number of exhibits had already arrived, representing the latest improvements in wheels as well as everything in connection with the modern bicycle. Light weight wheels are a feature of the show. In the matter of rims wood is conspicuous, and the success attained in its employment during the last year furnishes no small item of interest for both manufacturer and user. While a certain measure of success has been achieved, it is believed that the field still presents one of the most promising sources of study and investigation. The reduction in weight has been accomplished in nearly all instances without a reduction of strength. On the other hand the wheels that have stood the test are found to be more substantial than the models of a year ago. The striking improvements in tires that are to be presented also claim much attention as well as a general improvement in the smaller details of workmanship and finish. The range of the exhibit of cycle fixtures embraces about everything known to the trade; indeed the whole space taken shows that there are few manufacturers of importance in the country who have not secured a representation, while the fact that they are sparing no expense in fitting up their exhibits indicates a much higher appreciation of the enterprise than ever before.

Light weight racers will be shown by the Indiana Bicycle Co., one feature of their exhibit being a ten-pound racing wheel, built expressly for the show. They will also have on exhibition a twenty-two pound high frame Waverly Scorcher, fitted with G and J wood rim clincher tires; twenty-three inch framed Scorcher, fitted with steel rim and Waverly clincher tires; twenty-two pound Waverly Belle; twenty-two pound special diamond framed wheel, built for ladies' use.

The Monarch Cycle Co. will exhibit their full line, all fitted with the Monarch ball holder and dust protector. All the sprockets are detachable. Among other machines they will have an eighteen pound racer, listing at $125; a twenty-six pound ladies' wheel, listing at $85; a twenty-two pound road wheel, price $100.

The Western Wheel Works have made great improvements in their machines during the last twelve months. They show a twenty-pound Scorcher, price $90. The special features of this machine are large tubing throughout and an improved sprocket. They will also show the Crescent Scorcher and six other models, The Crescent No. 1 weighs twenty-three pounds, and is built on the lines of the Scorcher Crescents. Nos. 2 and 3 will list at $50 and $40 each. They are made with twenty-four and twenty-six inch wheels, and weigh 22½ and 22¼ pounds respectively. The Crescent No. 4 is a ladies' wheel, weighing but twenty-two pounds. Models 5 and 6 list at $50 and $40 respectively, and are fitted with twenty-six and twenty-four inch wheels. The former weighs twenty-four and the latter twenty-two pounds.

The Gormully & Jeffery Mfg. Co. will utilize a large space

Digitized by Google

and fill it with interesting examples of their fine workmanship.

The Grand Rapids Cycle Co. will be there with a full line of Clippers, weighing from a racer of sixteen pounds to twenty-seven pounds. All of their wheels are fitted with the best tires that the market affords.

The Ames & Frost Co. have fitted up a handsome space, in which they will exhibit their models, 15 being their leader. This machine weighs twenty-five pounds and lists at $100. Model 16 weighs 26½ pounds. Model 18, the racing wheel, weighs 18½ pounds. The ladies' wheel weighs twenty-three pounds,

The exhibit of the Munger Cycle Mfg. Co, will present many interesting features. Their twenty-pound roadster, tread 5¼ inches, lists at $125, and this is the cheapest wheel in their line. The eighteen pound racer is $140, and special racer, fifteen pounds, $150. The Munger machines have a patent adjustable hand bar and many other valuable and novel features.

Simplicity in construction and practical results are the features of the Julius Andrae exhibit. Mr. Andrae will demonstrate what has been secured by inventive genius, with a complete line of his machines, ranging in weight from the racer at eighteen pounds up to the light roadster at twenty-four pounds. The gentlemen's wheels are fitted with three different styles of frames, and the ladies' two. The lower rear forks are reinforced by an improved method, which overcomes the side strain in case of a twist or a fall. The tubing on the chain side is made two gauges heavier than on the opposite side.

Rouse, Hazard & Co., Peoria, Ill., have arranged an exhibit that will be especially interesting to dealers. They show five models of the Sylph, ranging in weight from a seventeen pound racer up to the twenty-three pound ladies' wheel, all listing at $100. They also present for inspection their famous Overland, in eight models, ranging in price from $40 to $75, and in weights from twenty-five to thirty-two pounds. They also present many interesting curiosities in the bicycle line.

The Falcon light roadster will be the feature of the exhibit of the Yost Mfg. Co., Toledo, Ohio, and the Models are presented in the most attractive light. The Falcon and Falconess, with twenty-six inch weels, are listed at $65 and $70 respectively, being the lowest in price. The Falcon roadster, weight 24½ to 27 pounds, is listed at $85, while the ladies' wheel, same weight, is $100.

Cushman & Denison have secured ample space and will make an interesting display in their line of pocket oilers and pump holers. No small degree of interest is shown in the Exposition by manufacturers of bicycle accessories, specialties, sundries, etc., the majority having taken full space independent of machine makers. Among the firms to whom prominence has been given by their interesting displays are: The New York Tire Co., R. B. McMullen & Co., Chicago; Sieg, Walpole Mfg. Co.; Capitol Mfg. Co., John Caldwell & Co., Braddock Hose Supporter Co., Mechanical Rubber Co., Spaulding Machine Screw Co., Reed & Curtis Machine Screw Co., Bridgeport Gun Implement Co., C. J. Whipple & Co., Indiana Novelty Mfg. Co., Rockford Tool Co., Morgan & Wright, New York Standard Watch Co., Diamond Rubber Co., Columbia Rubber Co., Niagara Cycle Fittings Co., R. C. Whayne.

The above will convey some idea of the preparations that had been made for the great Chicago show and its scope. It is impossible at this time to give a complete list of exhibits, as they were not all in place at the time of our visit. It is sufficient to add, however, that the managers of the enterprise are highly pleased with the prospects, having received every encouragement from manufacturers in this country and Canada. From the latter a large attendance is promised, as well as from the territory tributary to Chicago. The show promises to present the most striking improvements that have been witnessed in any twelve months since bicycle expositions were inaugurated. MACK.

Chicago, January 7, 1895.

Hardware Club Notes.

The following gentlemen have been unanimously elected members of the New York Hardware Club since our last report:

Courtlandt C. Clarke; Arcade File Works, Anderson, Ind.,

Samuel E. Winslow; Samuel Winslow Mfg. Co., Worcester, Mass.

Walter Lauder; Perry Pharmacy Association, *Sun* Building.

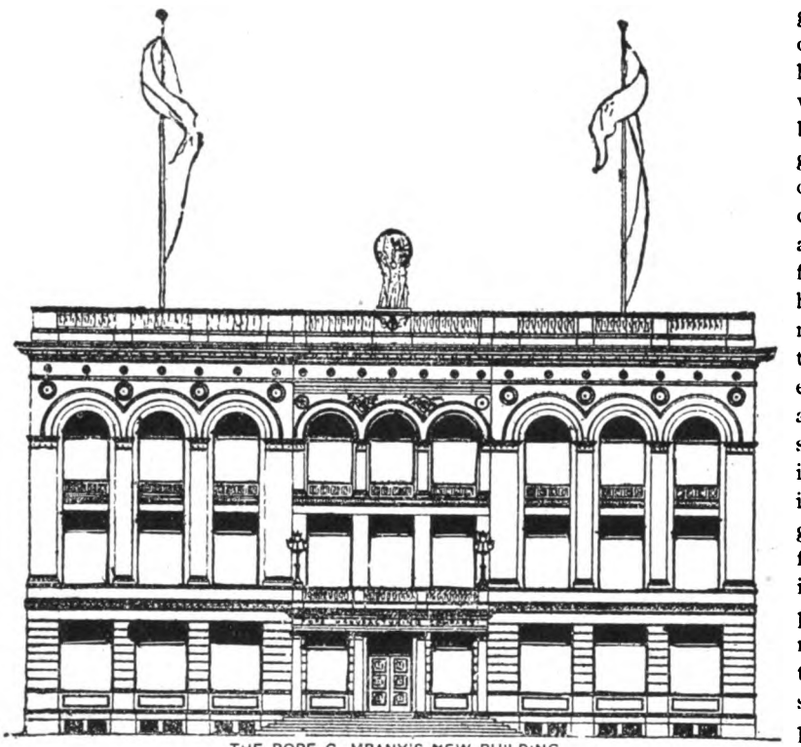
Canada Horse Nail Co.

James Ferrier and W. M. Mooney have, by mutual consent, dissolved partnership in the concern knovn in Montreal as the Canada Horse Nail Co., and at Ausable Chasm, N. Y.; as W. M. Mooney & Co., from and after December 1st, 1894. The business at Montreal will be continued under the name of the Canada Horse Nail Co., by James Ferrier, who assumes all liabilities of the dissolved firm, and to whom all debts due are to be paid. The business at Ausable Chasm, N. Y., will be conducted by W. M. Mooney under the name of W. M. Mooney & Co. as heretofore. There will be no change in methods, and the staff of operatives will remain the same.

The Geuder & Paeschke Mfg. Co., manufacturers of tinware, etc., Milwaukee, Wis., report that they are making preparations for a vigorous campaign in 1895. The tariff agitation having being practically settled for the next few years at least, they believe that business men generally will be justified in expecting a conservative increase in sales, and in consequence thereof there will be much heavier demands made on manufacturers than have been experienced for some time. The Geuder & Paeschke Mfg. Co. are in position to give prompt attention to all orders entrusted to them, guaranteeing entire satisfaction in every respect, and they extend a cordial invitation to the trade at large to avail themselves of their facilities, whenever in need of goods in their line.

Straws show which way the wind blows, and the number of large orders already placed for sundries indicate that the production of wheels next year will be fully as large as anticipated by the most sanguine. Cushman & Denison, who make oilers for the leading manufacturers and jobbers, are very much rushed on their '95 orders, and will make a larger stock than ever before. The "Perfect" Pocket Oiler is being made even better than in the past, the makers say. They will also make large quantities of medium grade oilers, as well as oiler holders and pump holders.

The Hatch Cutlery Co., Buchanan, Mich., inform us that "The Hatch Bolt Shear and Patent Automatic Knife are coming right to the front, and the truth of the matter is we cannot get out goods fast enough to meet the demand. That hardly sounds possible in these hard times," they add, "nevertheless it is so, and we are now putting in additional machinery and increasing facilities in order that we may meet demands."



The Dayton Nut, Bolt & Hinge Co., of Dayton, Ohio, whose plant for the past several months has been running with great irregularity, and with a reduced number of hands, is now in steady operation with a force of 350 men. This number will be increased to 500 shortly and then kept in constant operation.

The Winchester Repeating Arms Co. have recently received an order from one of the South-American States for 3,000,000 rounds of .30 calibre Mauser cartridges. The order will be completed in thirty days.

The Pope Co.'s Removal.

The census of Hartford, Conn., received quite an addition on December 28th by the arrival of about fifty officers and employees of the Pope Mfg. Co. The party arrived in a private car, which was attached to the four o'clock train from the Hub. The project of moving the correspondence department to Hartford, where the factory is, was determined upon several months ago, the idea being to make Hartford the headquarters. Extensive preparations for an elaborate structure were at once begun. It was completed several weeks ago, and is now ready for occupation. The handsome new office building, a cut of which is here shown, adjoins the Columbia factory and is a model of comfort and convenience. The structure is three stories high, with ample basement, and has a frontage of 104 feet. Built of cream-colored brick, with terra cotta ornamentation, it presents a pleasing contrast to the warmer red of the adjacent structures. The entrance is by a fine vestibule, which connects with a broad hall running through the middle of the building to a commodious stairway and elevator. Half of the ground floor will be utilized by the department of accounts, the remainder being devoted to the quarters of the advertising department. Most of the second floor is thrown into one large room, about 40x102 feet, for use by the executive department. This floor also contains the private offices of the treasurer and secretary. On the third floor are the offices of the president and vice-president of the company, the directors' room, the library and a lecture room. A dining-room with a fully equipped kitchen is also located on this floor, to be used for serving lunch to the officers of the company. The building throughout is handsomely finished in oak and is fitted with every modern convenience for the conduct of a great business.

THE POPE C MPANY'S NEW BUILDING.

The Boston branch store, with its riding school and repair shops, will remain in the building at No. 221 Columbus Avenue. Those remaining at the Boston office are Albert L. Pope, W. Kirke Corey, A. D. Peck, John Costello, B. D. Perkins, H. M. Mansfield, E. A. Davis, Jr., Irving Litchfield, Joseph A. Taylor, J. S. Washburn, Ira E. Fairbanks, Martin J. Donahoe, William M. Troy, Charles W. Tilton, F. A. Hentz, F. H. Adams, Lenox B. Smith, Charles H. Richardson, William T. Ashton, John Hushly, E. P. Evans.

The following is a partial list of those who will make their homes in Hartford: William Bancroft, Charles S. Sumner, F. H. Bossom, Fred C. Shepard, L. M. Allen, E. T. Benson, W. C. Walker, J. F. Cox, F. W. Prior, Cyrus E. Wheeler, E. B. Paine, H. E. Allen, H. R. Patten, G. H. Wilder, Solon P. Phipps, Ezra M. Cutting, William P. Hawley, A. E. Pattison, H. Lemhard, L. D. Harden, C. M. Starkweather, Herbert H. Rice, W. J. Osgood, L. S. Dow, G. B. Merrill, A. M. Bunce, C. N. Brown, W. C. Atwood, Charles Walker.

Colonel Pope will have offices in both Boston and Hartford, and will divide his attention between the two places.

Will Be at Both Shows.

The Syracuse Cycle Co., Syracuse, N. Y., make the following announcement:

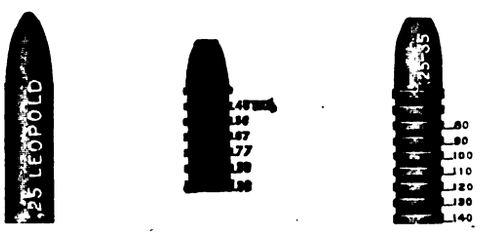
We shall exhibit our line of Syracuse Bicycles at both the New York and Chicago Shows. At the New York Show, to be held at Madison Square Garden, we shall occupy spaces 31 and 32, and at the Chicago Show, spaces 65 and 68. Our line of exhibit will consist of about as follows:

Syracuse Pacer, weight, 23 pounds; list price	$100
Syracuse Model C, weight, 27 pounds; list price	100
Syracuse Thelma (lady's), weight, 22 pounds; list price	100
Syracuse Track Racer, weight, 15 pounds; list price	125
Syracuse Tandem, weight, 36 pounds; list price	150
Special Syracuse, weight, 20 pounds; list price	125

Our vice-president and manager, J. C. Bowe, will be in attendance; also our traveling representatives, Wm. D. Hawley and F. H. Smith. We hope to meet all our friends and agents there, and each and every one may rest assured they will receive a warm and hearty welcome from the manufacturers of the Crimson Rims.

Sootene.

The Lone Star State looms up as a home of inventive genius. Royall Givens, of Corpus Christi, Texas, has patented an article which gives promise of being one of the "biggest little things" ever offered to retailers in the country. Sootene is the article, and at twenty-five cents it shows a handsome profit to the retailer, and is destined to have an unprecedented sale, and will prove a great boon to long suffering mankind. It is intended to prevent the interior surface of stoves, grates and stovepipes from scaling or corroding, and to keep the pipes, flues and chimneys free from soot. If these objects have been successfully accomplished, the invention will be hailed with delight. The demand for Sootene indicates that the inventor has "struck pay dirt," and he is making the merits of the patent known all through the land. HARDWARE advises retailers who wish to add "a pretty penny" to their income to read the advertisement appearing on another page, and to seek information of Mr. Givens, who will most gladly answer all such inquiries.



The Glidden Varnishes.

The Glidden Varnish Co., Cleveland, Ohio, manufacturers of cabinet, coach and railway varnishes, in a card elsewhere, announce to the Hardware trade that they are in the market for 1895 with their old-time business energy. They handle as some of the special features a Bicycle Wood-rim Enamel; a Protective black for carriages, window screens, exposed iron work, etc.; Glidden's Surfacene, a wood-filler and first-coater, and Glidden's Ivory Finish and M. P. special coach. They also make a specialty of Baking Japans and Lacquers. Their main office is in Cleveland, with branches in Boston, Chicago and St. Louis. An inquiry addressed to either of these offices will bring information which will be of value to Hardware dealers who are interested in these lines.

Popularity of the .25 Calibre.

"There has no cartridge worked into the good graces of the small bore cranks equal to the .25 calibre," says an authority; "it has been popular from the very first and its popularity is on the increase, as is evidenced by the many modifications of it. The original cartridge is the .25-20-86, the same as now made by the factories. The 86 grain bullet was thought by many to be too heavy on account of key holing, so the Ideal Mfg. Co. worked out a series of bullets varying in weights from 46 to 96 grains; the 77 grain became very popular immediately; the 'cranks,' however, desired to use the heavier bullets. This led to barrels being cut with a quicker twist running down from one turn in 18 inches to one turn in 8 inches, as per Mr. Pope, of Hartford, Conn., and Mr. Lowe, of Fitchburg, Mass., who are making special barrels. This, of course, required more powder and greater velocity, so these gentlemen have reduced the well known 32-40 Marlin shells at the muzzle so as to be correct for the 25 calibre bullets. Great work is being done with these arms, as may be noticed from time to time in the leading sporting journals. The Ideal Co. are kept busy administering to the wants of these shooters. E. A. Leopold, of Morristown, Pa., sketched what he desired for a bullet (cut of it is here shown), and sent it to Mr. Barlow, of the Ideal Co., who worked it up into the well known

cylindrical mould, which enables the user to get any weight he desires. The wonderful work done with this bullet is well known."

The Ideal Co. also inform us that they are now ready to meet the demands for heavier 25 calibre grooved bullets, as per cut shown herewith. Single moulds may be had to cast any of the specified weights. The company are also prepared to furnish the "Perfection Adjustable," that will cast the whole series of weights; it is said that the extreme point is exactly the same shape as the 25 calibre, but it is longer to the crimp shoulder, so that the 32-40 Marlin shell, reduced down to the 25 calibre, with this ball inserted, will be exactly the same length as the standard 32-40 Marlin cartridge, making ammunition that is properly proportioned for repeating rifles, which we understand the Marlin Fire Arms Co. are now at work on. The rifle will be called the 25-35 Marlin, model '93. The cut of the Regular 25-20 bullets will show readers the difference in the length of poin and the weights as compared with the 25-35. "Of course for light weight or short range bullets the series of 25-20 will be better balanced, but where the long ball is desired the 25-35 series will be the best."

Boston Hardwareman's Good Work.

This important accessory (the Hardware) to the perfectly trimmed house or edifice, while noticeable if bad, is not always placed upon the level which it deserves, provided, of course, it is of such a high standard as may be found in the new State House. Here the entire building is supplied by the Hardware products manufactured by the house of Enoch Robinson, of Nos. 39 and 41 Cornhill, Boston. Special designs in knobs, escutcheons, locks and like Hardware are seen to advantage on the solid finishes, and in every instance they are appropriate to the surroundings and uses. The practical phases of these appliances are fully equal to their ornate and handsome finish. What more could be asked and given by a concern which, for more than half a century, has suppled some of the largest and best equipped structures in the land with Hardware? Such is the reputation of this house, and has been since its foundation by the late Enoch Robinson in 1837, at which time the Hardware in use was imported, and we were dependent upon foreign invention and manufacture for our most ordinary supplies. Mr. Robinson was, by the way, the first to make locks and knobs in this country, and the reputation of this work, its superiority and lasting qualities inaugurated by him have never been found wanting in any particular, nor have they ever been in all points equaled. This much of praise is due to one of our local houses, which has been recognized and awarded diplomas from the date of its origin, 1837, down to 1892. There is no question of doubt that the State House is one of the best trimmed, in point of Hardware, in America, and the infallible test of time will doubtless attest the assertion.—*Boston Herald.*

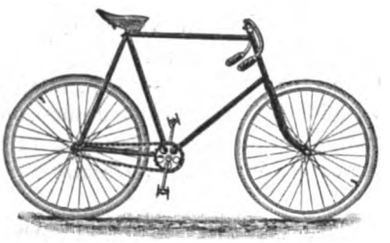
"Pompeiian Bronze" Wire Cloth.

The Clinton Wire Cloth Co., Clinton, Mass., are manufacturing a new style of wire screen cloth, which they call "Pompeiian Bronze" wire cloth, and which they say is very rapidly making its way in the better class of residences, hotels and public buildings. In describing it they further say: "It will not rust or deteriorate, even when exposed to the salt atmosphere of the ocean; requires no paint or lacquer and is practically indestructible. The wire is an alloy of copper, aluminum and other metals, combining all of their durability with the toughness and elasticity of steel. The mesh is perfectly square and uniform in both warp and filling, being the result of great care on the part of expert weavers operating the most improved and accurately adjusted wire looms extant. The color is a fac-simile of the ancient Pompeiian bronzes so highly prized by art connoisseurs, and is so delicately shaded in manufacture as to render the screens almost invisible. We are prepared to furnish these goods in all meshes and gauges of wire. Send for samples and prices."

Believes in Wood Rims.

EDITOR HARDWARE: In the bicycle business there is every indication for 1895, that Wood Rims are going to be right in it! Most of the manufacturers a year ago were skeptical as to their utility, but the increasing advantages and the many improvements in tires, together with lessening weights demanded each succeeding year by the "up-to-date" cycler, will eventually make this an important industry. I notice in connection with this subject, that a Boston Wood Rim Co. have started a branch in England, with the pleasant capitalization of $875,000. Whether they achieve success or not they intend to deserve it. W. R.

Providence, R. I., January 2, 1895.



Prince Wells has applied for a patent on a nickel-in-the-slot machine for inflating pneumatic tires. This is quite a novelty, and has never been introduced before, although it has been thoroughly tested by Mr. Wells. The machine will be placed in front of any cycle agency, and by dropping a nickle in the slot a rubber tube with a universal connection can be drawn out about three feet. When it is at full length it releases a lever, and, by pressing a button, the air is turned on and the tire inflated. The air is stored in a reservoir, which is filled by hydraulic pressure. This machine will be sold at a medium price, and will be a great saving to agents and a convenience to the riding public. The machine is so arranged that it is impossible for the small boy to tamper with it.

Souvenirs will be presented by the Hay & Willits Mfg. Co., makers of Outing Bicycles, to all bicycle agents who desire them. The company's exhibit at the Chicago Cycle Show will be in the gallery No. 139.

Lovell Diamonds, 1895 Models.

Although this make of bicycle has only been on the market for five years, the John P. Lovell Arms Co. have been before the public for the past fifty years or more. They are to be complimented on the wonderful success attained by their wheels. From the beginning of their bicycle career they have certainly fulfilled their promise to manufacture and place on the market a high grade wheel at a popular price. Riders fully realize and appreciate the style, light-

MODEL 22.—TRACK RACER.

ness and durability of their wheels and the reputation they have justly won. No doubt the popular price of the Lovell Diamond wheels has been instrumental in reducing and equalizing the price of other so-called high grade makes. This fact is acknowledged and fully appreciated.

We are permitted to specify a few of the many important improvements made in this make of wheel for the coming season: "First is a larger size tubing in the frame, which gives it a much finer appearance than in the past. They have also raised the crank shaft; narrowed up the tread; put in a barrel crank shaft hanger; improved dust-proof

MODEL 23.—SEMI-RACER.

ball bearings; improved detachable front sprocket wheel; handsomely polished chain; new pedals of special design, fitted with rubber, leaving one side rubber pedal while the other is rat-trap, and by removing the rubber plate it becomes rat-trap on both sides. This pedal is dust-proof. On the ladies' and road wheels a new and simple detachable brake is used, and by removing two screws and nuts the brake can be taken off, leaving no sign of same. The mud and chain guards can also be removed, leaving no sign of ever having been on the wheel. A new and important feature in the lady's wheel is the direct diamond frame, with

MODEL 24.—LIGHT ROADSTER.

the strongest design double tube on the market. An improved guard, light in weight, easily tightened, adjusted and detached is also used."

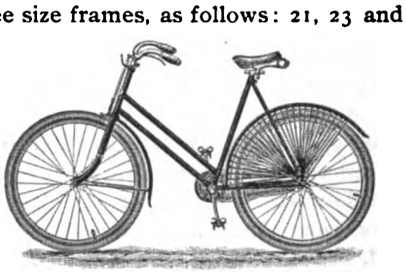
The following is a list of the '95 line of Lovell Diamonds:

The Model 22 or Track Racer in many respects resembles the Model 17 manufactured in '94. This machine was very successful both on road and track and has a reputation among the riders of being of the strongest track wheels ever made. The new model is improved as follows: Larger tubing in the frame; higher crank shaft; 5-inch tread; barrel shaft and improved chain, pedals, handle bar and saddle. Weight, 17½ pounds. Price, $100.

The Model 23 or Semi-Racer is identically the same machine as the Model 22, except that it is fitted with semi-racing tires and rims, which are suitable for road use. It also has a different handle bar and saddle. Weight complete, 19½ pounds. Price, $100.

The Model 24 or Light Roadster takes the place of the Model 18 of last year. There were more of these wheels put out than of any other kind, and without doubt it was their most successful machine manufactured. It has all the good points of last year, with many improvements, the most important of which is the larger gauge tubing in the frame; higher crank shaft; 5½-inch tread; barrel bracket; new chain, pedals, sprocket wheels, handle bar and saddle. Weight complete, 22 pounds. Price, $100.

The Model 25 or Full Roadster is the same as Model 24, except that it is fitted with mud guards, brake, inverted



MODEL 25.—FULL ROADSTER.

handle bar, rubber pedals and road saddle. This machine is so made that the brake work and guards can be removed and show no signs of ever having been on the wheel. Drop bars and scorcher saddle can be furnished, if preferred. Weight complete, 24 pounds. Price, $100.

The Model 26 or Ladies' Light Roadster will be, without doubt, among the most successful ladies' wheels ever placed on the market. Each year they have been very successful in their efforts to build a ladies' wheel which would be particularly light, graceful and easy running, combined with strength and durability. As can be seen from the cut, many improvements have been made; although the wheel is light, yet it is very strong. The improvements consist of a double direct frame; new guards; sprocket wheels; chain; 5½-inch tread; barrel crank shaft; new handle bar and saddle. Weight complete, 24 pounds. Price, $100.

All of the above line, including the ladies' wheel, are made in three size frames, as follows: 21, 23 and 25 inches.

MODEL 26.—LADIES' LIGHT ROADSTER.

In making these in this way, it gives the riders a wheel that will fit them, regardless of their height, without having a lot of extra seat posts attached. All of the above wheels have been thoroughly tested and will be found strong and durable in every respect. Cemented or detachable tires, wood or steel rims will be furnished.

It is also expected that a light tandem will be placed on the market this season, which will be, they say, "in many points, far superior to anything ever made." Full particulars in regard to this machine will be given later. Parties desiring a medium grade line of wheels will do well to examine the Excel line put out by the above firm. These will list from $40 to $65 and will have all the improvements. For full particulars send for catalogue. The Lovell people will occupy Exhibit No. 143, at the Chicago show; Nos. 86 and 87, at the New York show.

Bruce & Cook's Annual Greeting.

There is always much sound wisdom and valuable information in the annual New Year's Greeting issued to their friends by the old and famous house of Bruce & Cook, New York, and it is with a feeling that the space is well used, that HARDWARE reproduces that of 1895 in full. The table of weights of tin-plates, and the comparison of prices, are especially valuable as contributions to the statistics of the trade. The Greeting is as follows:

We hand you herewith the twenty-second annual edition of our Calendar, which we hope will be welcomed as an old friend.

During the last few years, Plates lighter than the old standards have come into such general use that we have made up a table showing the net weights of all leading sizes, and at the basis weights most in use. This will enable you to tell at a glance the weight of the different sizes and thicknesses, and also to be sure that weights received are same as ordered without a long calculation. This table is printed on reverse of Calendar. (It will be found below.)

NET WEIGHT PER BOX TIN-PLATES.

Tin-Plates.—The history of this during 1894 was a gradual decline in price by makers, and a sudden drop October 1st, when the new rate of duty took effect. The very low prices obtaining for steel and pig tin have made possible the lowest prices on Tin and Terne Plates ever known, and this, with a duty of $1.20 per 100 pounds or about 50% to 60% of the present value of Plates used by canners, and Terne Plates used for roofing. The causes for this decline may be found in the over-production of steel, and under improved methods at low prices—the low prices for pig tin, owing partly to the low rate of silver, and the operations of a tin syndicate and those opposed to it. As labor, steel, and fuel are by far the most important items entering into the cost of Tin-Plate, any change in these may be taken as a sure and quick guide as to future value of Plates.

A comparison of prices ruling latter part of December in large lots, may be of interest:

	1894.	1893.	1892.	1891.	1889.	1885.
Steel Rails, per ton	$22.00	$24.00	$30.00	$30.50	$28.50	$34.00
IX Pig Iron, "	11.25	13 50	14.25	16.00	16.00	18.00
Straits Tin, "	314.00	465.00	440.00	448 00	444 00	470.00
" " duty, per ton	Free	89.60	89.60	Free	Free	Free
Pig Lead	72.00	74.00	84.00	95.00	93.00	88.00
IC 14x20 Coke Tin, per box	4.00	5.35	5.38	5.35	5.20	4.80
IC 14x20, duty, per box	1.29	2.36	2.36	2.36	2.36	1.07
Import price, less duty	2.71	2.99	3.02	2.99	2.84	3 73

The resources of this country are very great for almost every known commodity, and for many of them, far exceeds that of any other country. Our home market is an exceedingly large and important one and should be served by producers on terms as favorable as to any other, but we should not be content with this alone. We must do an international trade, and to do this we must give our producers and manufacturers the best market to buy in. We must be a Nation among Nations, able to reach the best of the world's markets for both buying and selling, but above and beyond all, we must have a system of currency and finance not useful in our own country alone, but available the world over. A United States dollar should be such that it will be recognized and accepted for a dollar value at sight, wherever or whenever seen, no other kind should be issued. As "no man liveth to himself," so it will be with Nations. We hope for wise legislation at Washington on the currency question, and with as little delay as is consistent with wisdom.

Values do not usually remain at the lowest point very long. We believe that they are there now, and there are evidences of a better demand, a revival of industries, after nearly two years of prostration. Let those who guide labor and those who control capital, study each other's interests, work in harmony for a common end, and we are sure the trade of the country will right itself, giving to all honest men an honest return for honest labor.

Trusting that we may both have a prosperous and happy New Year, and soliciting a share of your favors.

Yours faithfully, BRUCE & COOK.

New York, January 1, 1895.

Death of a Prominent Hardware Man

William Irvin Seltzer, secretary of the Enterprise Mfg. Co. of Pa., Philadelphia, Pa., died of appendicitis on December 26th, 1894, at the age of thirty, in the home of his father in Philadelphia, after an illness of about six months. Mr. Seltzer was a University of Pennsylvania man, going there from the first division of the Philadelphia Grammar School. He became connected with the Enterprise Mfg. Co. in 1887, taking charge of the advertising department. He soon showed his worth, and on January 1st, 1893, was elected secretary of the company, which position he filled with credit until the time of his death. In May last he went to Europe for his health, where he stayed four months. He was a man of promise, possessing energy and executive ability, and destined to make his mark in whatever business he might have embarked. He was a member of the Mt. Horeb Masonic Lodge, the Manufacturers' Club and the Columbia Club. Mr. Seltzer, his father, was one of the originators of the Enterprise Mfg. Co., and the senior member of the firm of the Seltzer, Klahr Hardware Co. The funeral took place December 29th, interment being in the Laurel Hill Cemetery, in Philadelphia.

The Union Metallic Cartridge Co. are giving their friends and patrons an attractive calendar for 1895. A woodland scene is depicted. In the foreground, sitting with their backs to a tree, are two little "tots," a boy and a girl, fast asleep, the boy with his arm thrown protectingly around his little companion, while a little gun lies harmlessly at their feet. On the tree is a sign-board bearing the initials: "U. M. C." In the background, peeping around the tree, is a timid fawn, with more curiosity than fear, in its large eyes, intently watching the juvenile hunters.

William B. Osgood, manager of the Keating Wheel Co., Holyoke, Mass., will be in charge of the company's exhibit at the Chicago and New York Cycle Shows. Mr. Osgood will have an able corps of assistants, and will show eight new models of the "Incomparable Keating Bicycles."

The calendar, diary and memorandum combined, presented by the Cleveland Twist Drill Co., Cleveland, Ohio, is both unique and handy, and will be highly useful to all business men who have memoranda to keep and engagements to remember.

McIntosh-Huntington Line for '95.

The McIntosh-Huntington Co., Cleveland, Ohio, have now completed their line of Bicycles for 1895, and we are herewith permitted to announce the same, with illustration

FIG. 1.- NO. 8 SUNOL.

of some leading features. The line is made up as follows:

No. 8, Sunol	lists,	$100.00
No. 18, Ladies' Sunol	"	100.00
No. 38, American King of Scorchers	"	100.00
No. 48, American Queen of Scorchers	"	100.00
No. 19, Crawford	"	100.00
No. 20, Ladies' Crawford	"	100.00

The above will be their complete line of high grade wheels. In connection with them they will market a line of moderate priced wheels under their own brands of Hercules and Stella, as follows:

No. 176, 28 inch Hercules	lists,	$75.00
No. 178, 26 " "	"	60.00
No. 180, 24 " "	"	50.00
No. 196, 28 " Stella	"	75.00
No. 198, 26 " "	"	60.00
No. 200, 24 " "	"	50.00

The Hercules is a diamond frame, man's wheel.

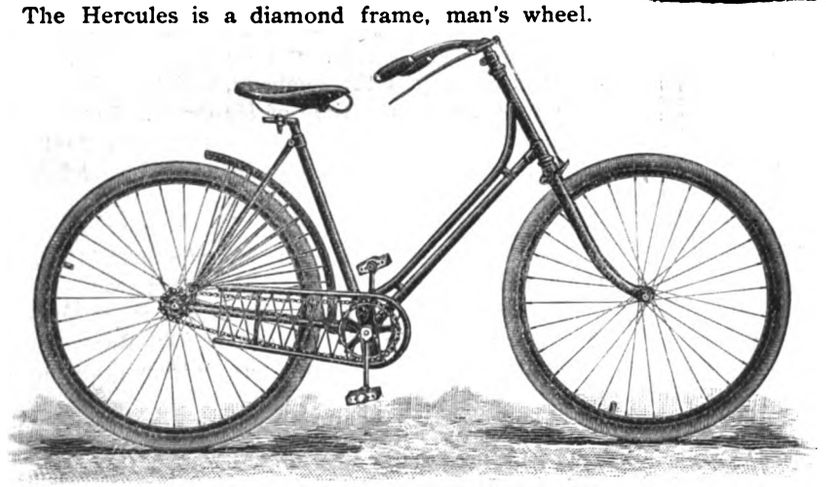

FIG. 2.—NO. 18 LADIES' SUNOL.

The Stella is the double drop pattern, and suitable for a lady. The accompanying illustrations will give a good idea of this line of wheels. The McIntosh-Huntington Co. have had unusual success with their bicycle lines, and equipped as they now are, the success of the past is sure to be increased in the future.

The Bigelow & Dowse Co., Boston, have purchased the entire stock of Wire Nails at the Carnegie Steel Co.'s mills in Beaver Falls. We understand that this purchase is in the vicinity of 40,000 kegs. The stock covers a complete assortment.

The 1895 calendar presented to the public by the Western Block Co., Lockport, N. Y., is a neatly gotten-up affair, and of a convenient size for business use.

A. J. Warner, president of the Warner Lock Co., Chicago, has been in New York for several days, attending to business and exchanging holiday greetings with his friends.

Southern Stove Rates.

The stove maunfacturers who met in Cincinnati, Ohio, some weeks ago, and considered the question of stove rates on railroads, have not allowed the grass to grow under their feet. The freight traffic associations will shortly be besought by a committee of the National Stove Manufacturers' Association to withdraw their threat to advance rates on the manufactured product from third to second class. The members in attendance at the meeting there were mostly from St. Louis, Louisville and Chicago, these points appearing most to be affected by some advance. Cincinnati stove men took but a seemingly passing interest in the deliberations of the association, though they have at times been materially affected. In connection with the matter the experience of Chattanooga stove men of some months ago is recalled. One of the largest stove works in the South, located at Chattanooga, sent nearly all of its

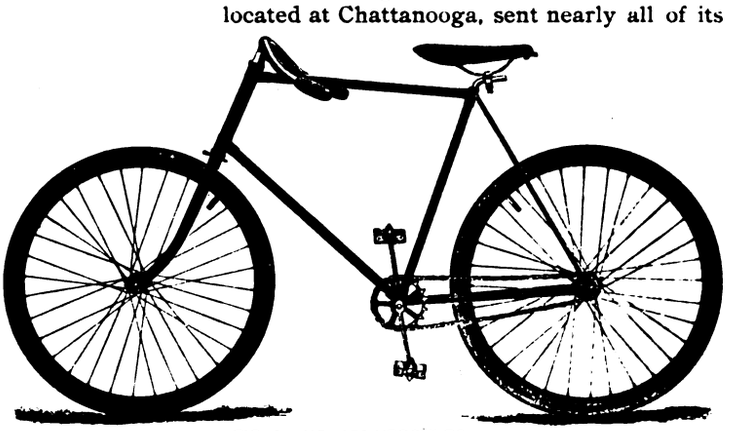

FIG 3.—NO. 176 HERCULES.

product to the Northern market by way of Cincinnati.

A rate of twenty-seven cents per 100 was made by the Queen & Crescent, however, and the result was that the company could not ship its stoves to Cincinnati except at a loss, and had to hunt another market. Business fell off to such an extent that with a small stock on hand the works had to shut down. Later on the Queen & Crescent withdrew from the Southern Railway and Steamship Association, and made a reduction of the rate to nineteen cents. The day following the operation of this rate two carloads of the stoves were sent North, and the company

FIG. 4.—NO. 196 STELLA.

resumed operation with a large increase in the number of hands.

HARDWARE costs only One Dollar a year.

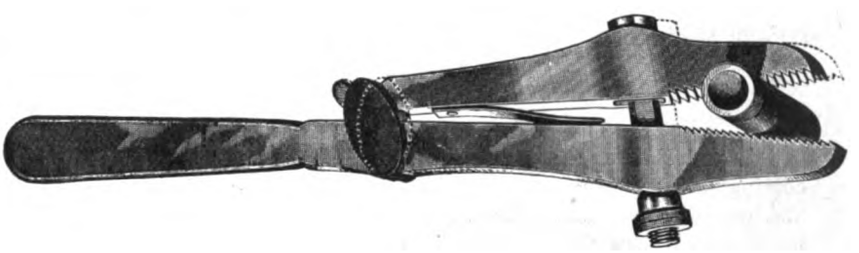
Recent Catalogues.

The 1895 catalogue of the Keuffel & Esser Co., No. 127 Fulton Street, New York, manufacturers aud importers of drawing materials, surveying and mathematical instruments, is perhaps the most complete ever published in its line and fairly teems with valuable information. Some of the features of this catalogue are: A short treatise on drawing paper; a valuable explanation about drawing instruments; explanations of planimeters and similar instruments; an exhaustive description of the progress of surveying instruments; an illustrated paper on verniers and their application; colored details of the most improved styles of graduating leveling rods; directions for reading elevations by aneroid; explanations about field glasses, etc. This information is highly instructive and will prove of great interest to all interested in those lines of business. There are also distributed through the catalogue a number of half-tone views from photographs of the several departments of their store and factories. These will be of interest also, because they will enable the reader who does not know them to distinguish between their catalogue, to a great extent of special lines and makes, and the many other catalogues, which are described as "individual only on their title page, and obsolete in their contents." It should be added that this edition of their catalogue is not a reprint from former ones, but has been rewritten, and revised and enlarged by more than one hundred pages. While they confine themselves strictly to their line of business, drawing materials and surveying instruments, they have endeavored to omit nothing in this line which is good and reliable, and their catalogue therefore represents the latest real improvements, and the progress made since their last edition.

The Ashtabula Tool Co., Ashtabula, Ohio, have marked the opening of the new year by the publication of a handsome and comprehensive catalogue of the lines of manufactures, for which they have long since earned distinction. The book, while not large in size, is well bound and printed in colors upon heavy book paper, that brings out their many illustrations in an excellent manner. Among these are seen representations of their hay, straw and manure forks; barley and spading forks, corn and vegetable forks, shaving forks, coke, coal and tanners' forks, garden and mortar hoes, plain and brace steel rakes, malleable rakes, weeding hoes, potato and manure hooks, fork, rake and hoe handles, lawn rakes, etc., etc. This certainly presents a variety of goods of interest to the Hardwareman, and as the illustrations are accompanied by full descriptions and prices, it will be well worth the time of any dealer to send for the catalogue. The trade mark "Diamond Tools" appears as the heading of each page. The reputation of this company for first-class goods gives weight to any claim or representation they may make.

The Black Mfg. Co., Erie, Pa., have issued a finely finished prospectus for 1895, of their Tribune Bicycles. They say that it has been their policy from the start to build only bicycles of the best quality, and that the results obtained during the season past have been so satisfactory that they are determined during the coming year "not only to uphold the high reputation of Tribune workmanship," but to offer the trade even better wheels, if possible, than those they have built in the past.

C. W. Dunlap & Co., New York, have issued an illustrated catalogue of their Housekeeping Hardware and Garden Tools. Everything almost that can be imagined in these lines, is here presented, and as this concern have a reputation for first-class goods, any statement that they make in relation to their productions can be relied upon. In a note of introduction they say: "The increasing demand for these goods is conclusive evidence of the wisdom in closely adhering to the following purpose adopted by us several years ago. Our purpose is not to compete in price with the multitude of cheap goods in the market, but by using none but good stock and employing first-class mechanics, we are producing a class of goods popular with those merchants who deem qullity of more importance than cheapness. We invite close inspection as to comparative value and prices."



Tower & Lyon, No. 95 Chambers Street, New York, are issuing a handsome little catalogue showing a great variety of punches, both for conductors and other uses. The styles are various, and the goods, it may be depended upon, are first-class in every respect, as nothing that is not so is issued bearing the imprint of this well-known house.

"The Winton Bicycle Book" is the title of a handsome publication issued by the Winton Bicycle Co., Cleveland, Ohio. It is finished in colors and thoroughly illustrated. It shows in addition to their own line of wheels some of the old-fashioned kind used in by-gone days.

The Dauntless Bicycle Co., Toledo, Ohio, are sending their friends a little catalogue containing specifications of the Dauntless Bicycle manufactured by them.

Curtis Pipe Wrench.

The American Saw Co,, Trenton, N. J., have met with great success in the sale of their Curtis Pipe Wrench, a specialty which they have pushed with energy and vigor. The special points advanced in its favor are the diagonal teeth of the alligator wrench on both jaws, and the fact that when applied to work on the first motion the jaws approach one another at once, taking an absolutely sure grip. On

the reversal of the handle the jaws quickly release, and then as quickly the return motion gives the sure grip again. In further explanation the manufacturers say: "The wrench is easily adjustable to different sizes, and also takes many sizes of pipes on one adjustment. When the pipe is close in a corner, or in any contracted space, this wrench can be adjusted to take hold when no other can. We know we have succeeded in making in this wrench the strongest, most effective, most convenient and durable one in the market, while it will be sold at no higher price than other wrenches which attempt to do similar work." They further state that if the local dealer cannot supply this wrench, they will send it C. O. D., free of all charges, at a price of $3.

W. L. Marks, representing Prince Wells' celebrated East India Stick Grapholine is now travelling in the East, and will wait on the trade at the New York Cycle Show, showing this celebrated chain lubricant, which needs no introduction to the trade, and described by the maker as "the original stick lubricant, which has been so widely imitated since its first introduction some three years ago."

J. H. Robley, representing the Falcon line of wheels, manufactured by the Yost Mfg. Co., Toledo, Ohio, has recently moved from No. 142 Chambers Street to No. 1 Park place, corner Broadway, New York. He says "that an increasing number of Hardwaremen are adding bicycles to their stocks." He will soon issue a catalogue of the goods he is handling.

Building in 1895.

PROSPECTS IN ALL DIRECTIONS AS SEEN OFFICIALLY BY THE SECRETARIES OF THE BUILDERS' EXCHANGES—A VARIETY OF HOPEFUL PROSPECTS.

The opinions found below as to the building prospects for 1895 are official and instructive. The sale of important lines of Hardware is so dependent upon building operations that inquiries were made by HARDWARE to the secretaries of the various Builders' Exchanges, as to the outlook in their various sections for the coming year. The answers were courteously and promptly given, and such as have been received to date are hereby published in full.

PROSPECTS IN BOSTON.

Master Builders' Association: The present condition of the building trades of Boston is good; peculiarly so, when the dullness of the outlook at the beginning of the season is considered. The amount of building brought under construction steadily increased in volume until the total amount, completed and under way, at the close of the year, exceeded all indications of the early season. The influence of the present healthy feeling promises to favorably affect the volume of work for 1895 in a general restoration of confidence among real estate owners and persons contemplating building. The amount of new business in the hands of architects at this time, indicates that the total of work to be commenced in 1895 will compare well with the average of the years immediately preceding the recent financial depression. The condition of the relations between employees and workmen in the building trades is remarkably satisfactory, there being an almost entire absence of friction between the two. The existence of an arbitration agreement between the bricklayers, the stonemasons, the building laborers, and their employers, together with an effort on the part of the carpenters to establish a similar agreement, promises a continuance of the present amicable relations for the coming season.

IN BALTIMORE.

Builders' Exchange: As regards to the outlook for the coming spring I think, to the building interests, it looks fair. We have done a good business for the last year, considering the depression that has visited our entire country; and while the competition has been sharp and margins correspondingly small, yet we have been busy, and feel confident it will continue through 1895. Our city is growing steadily and surely. No boom, but a steady, healthy growth. And why not? We have everything to cause us to extend our borders and induce strangers, manufacturers and others to settle here—fine climate, cheap food, cheap and convenient homes, with markets that cannot be surpassed, and all necessities of life as low if not lower than any other city in the country.

IN WILMINGTON.

Builders' Exchange: As to the building business for the coming year we think it will be better than it was last year. Our building fell off one-half last year, and the Hardware business was very dull, but we are looking for an increase the coming year. We notice a tendency among architects and owners, and builders also, to use a better class of Hardware, and our dealers are making special efforts to display a fine line of Hardware in their cases. Our Hardwaremen display a good deal of enterprise in catering to the public, and, as a rule, carry a fine line of goods. There are several fine buildings either contracted for or plans being prepared for, and, altogether, the outlook is fair.

IN PROVIDENCE.

Builders' & Traders' Exchange: In relation to the prospects for the coming year, I am happy to say that the prospect for building the coming year was never better. The State has a new state house in the market for bids, and also a normal school building. The N. Y. & H. R. R. are pushing the erection of a large Union depot. The city contemplate the erection of four schoolhouses and a High School building. There are several large buildings for business purposes in process of plans, and the usual amount of residences and tenement houses will give full employment to all our builders in the near future. All are hopeful.

IN COLUMBUS, OHIO.

Builders' and Traders' Exchange: The prospects of building in Columbus and vicinity for the coming season are fairly good. There are several large office buildings in process of erection, and also two large hotels. Plans are being drawn for some three or four public school buildings and two large factories. One peculiarity about building in this city is the fact that very few dwellings are being constructed for the purpose of speculation. Nearly all the residences being built will be occupied by the owners and their families. The general feeling among contractors is that business in their lines will open lively with the return of warm weather.

LOWELL, MASS.

Master Builders' Exchange: In regard to your inquiry of business in our city would say that the actual prospects at this writing are not very promising, but there seems to be a general opinion among men of all classes that the early spring months will show a change for the better. Opinion is based upon the knowledge that at present the architects have no work in prospect, and moneyed men use the expression "that there is no inducement for any great outlay, as there are so many vacant stores and tenements," but, nevertheless, it is the common expression that in the spring business will be better—and so we all hope.

FROM FAR-AWAY DENVER.

Master Builders' Association: As per your request, I will say that the building interests for the coming season will be much better than they were last year. At least we are so informed by the architects. The general feeling is that we have passed over the worst of our hard times and business is looking better. Greeley is building a large school; Boulder a Masonic Temple and Cripple Creek a Masonic Temple. With new and rich discoveries in the different mining camps Denver will thereby be benefited to some extent.

NEW YORK CITY,

Mechanics' and Traders' Exchange: In regard to the outlook for the building trade for this year 1895, the writer, from his personal observation, and from gleanings among the members of this Exchange, ventures to say that the prospects are good. It is hardly probable that industries will remain in their present condition. I personally look for a revival, and nearly every one is of a similar opinion, One thing is certain, the hoped-for revival adds a certain amount of confidence,

THE REPORT FROM BUFFALO.

Builders' Association Exchange: As to the outlook for building for the spring and summer it is a little early to express our opinion, although the feeling seems to be that we shall have a good year in Buffalo. Several large buildings are talked of that will cost from two hundred thousand to one and one-half million each. If the "Electric Power" reaches us from Niagara Falls in the spring I do not think there will be any question as to the Buffalo boom for 1895.

PORTLAND, ME.

Builders' Exchange: In answer to your inquiry, will say that the prospects for business the coming year are as good as have been for a long time. I think we have had our hard time.

DETROIT'S PROMISING OUTLOOK.

Builders' Exchange: The prospects for building during the coming spring and summer are very promising, judging by the condition of things in the architects' offices. I base

Digitized by Google

my opinion upon the facts that they are making new sketches, and because many of the plans which were laid away when the panic came are being called out now. A renewal of commercial confidence will revive business in the building trades. Let us hope for the best.

PITTSBURG.

Builders' Exchange: The prospect for building during the coming season appears brighter. One large brick building has been let, contract price $300,000; two more are talked of, and the architects consider prospects good, but prices low in all branches. Dwellings will lead in the number of buildings this season, as many of the business houses, some on prominent streets, remained idle during the past year.

INDIANAPOLIS.

Builders' Exchange: The prospect for building in our city is very good for the coming year. Plans for several large buildings and blocks are now out for figures. The members of our Exchange have been generally employed during the past year, and say they see much more in sight for the coming year in this city.

GRAND RAPIDS, MICH.

Builders' and Traders' Exchange: Although rather early in the season for any definite knowledge of building in our city this year, I will say that, from all present indications, we will have a prosperous season. Plans are already out for three or four large buildings, which at this time would indicate considerable work.

MILWAUKEE'S REPORT.

Builders' and Traders' Exchange: Building prospects are exceedingly bright, and the members of the Exchange expect to see a prosperous building season.

ST. LOUIS: BRIEF, BUT GOOD.

Builders' Exchange: In reply to your inquiry will state that the building prospects for the year 1895 in this city are very good.

National Bicycle Exhibition.

From present indications the success of the first National Bicycle Show, to be given January 19th to 26th, at the Madison Square Garden, at New York, is assured. Every bit of space in the arena has been engaged, and the indications are that even the upper sections will be engaged days before the show opens. Every exhibitor of any importance in this country will be well represented, and the display of cycling improvements will in itself direct the close attention of every wheelman.

Among the novelties will be the bamboo bicycle and the motor machine, which will be seen in New York for the first time. The motor cycle should attract great attention. The principle of this wheel is a noteworthy invention. The power is furnished on the principle of a drop of naptha falling into the cylinder and exploding, driving back and forth in the cylinder the piston rod which is attached to the gearing that turns the rear wheel. The motor is located in the rear of the rear wheel, and the speed is controlled by a rod running from the motor to the handle bar; the regulation of the speed is a matter of an instant.

The tire exhibit will be exceedingly large, as there are now at least a score of firms making these necessary articles.

Stage performances in connection with the show will be the biggest of its kind ever given. The best trick riders in in the world have been engaged for the entire week.

The following is a list of exhibitors:

Abbott, Wheelock & Co.,
Ames & Frost Co.,
American Dunlop Tire Co.,
Ames Mfg. Co.,
Anglo-American Iron & Metal Co.,
American Sewing Machine Co.,
Burtis & Zimmerman,
Burns-Elliott Simplicity,
Bidwell-Tinkham Cycle Co.,
Barnard & Co.,
Bowman, Sid. B.,
Buffalo Cycle Co.,
Biddle Hardware Co.,
Black Mfg. Co.,
Boston Woven Hose & Rubber Co.,
Bridgeport Gun Implement Co.,
Butler & Ward,
Climax Stopper Co.,
Cushman & Denison,
Cole & Co., G. W.
Climax Mfg. Co.,
Cortland Wagon Co.,
Crawford Mfg. Co.,
Columbia Rubber Works Co.,
Champion Mfg. Co.,
Curtis-Child Mfg. Co.,
Cyclone Comb. Cycles,
Davis & Stevens Mfg. Co.,
Dunphy & Sons, John,
Densmore-Yost Co.,
Demorest Mfg. Co.,
Eagle Bicycle Mfg. Co.,
Excelsior Needle Co.,
Eastern Rubber Mfg. Co.,
Elastic Tip Co.,
Empire Bicycle Mfg. Co.,
Faxon & Co., O. J.,
Garvin Machine Co.,
Gormully & Jeffery Mfg. Co.,
Guyon & Co., Ltd., C. F.,
Geneva Bicycle Co.,
Grand Rapids Cycle Co.,
Gilbert & Co., F. C.,
Globe Cycle Works,
Hill Cycle Mfg. Co.,
Hart, Jr., W. H.,
Humber & Co.,
Hitchcock Mfg. Co.,
Hulbert Bros. & Co.,
Hunt Saddle Co.,
Indiana Bicycle Co.,
Indianapolis Rubber Co.,
Keating Wheel Co.,
Light Cycle Co.,
Lipe & Brown,
Lengs, Son & Co., John S.,
Lovell Arms Co., John P.,
League Cycle Co.,
Manhattan Optical Co.,
Mechanical Rubber Co.,
Myers Mfg. Co.,
McKee & Harrington,
Morgan & Wright,
McMullen & Co., R. B.,
Mechanical Fabric Co.,
Newton Rubber Works,
New York Standard Watch Co.,
New Departure Bell Co.,
New York Belting & Packing Co.,
New York Tire Co.,
Parsons & Mullen,
Pneumatic Saddle Co.,
Premier Cycle Co.,
Pope Mfg. Co.,
Pierce & Co., Geo. N.,
Pratt & Whitney,
Peerless Mfg. Co.,
Porter & Gilmour,
Plymouth Cycle Mfg. Co.,
Queen City Cycle Co.,
Raleigh Cycle Co.,
Relay Mfg. Co.,
Remington Arms Co.,
Read & Sons, Wm.,
Rosenfeld & Co., Louis,
Smith Tire Co., L. C.,
St. Louis Refrig. & Wdn. Gutter Co.,
Sager Mfg. Co.,
Syracuse Cycle Co.,
Starr Cycle Co.,
Stearns & Co., E. C.,
Shepard & Sons, H. G.,
Sterling Cycle Works,
Snell Cycle Fittings Co.,
Schoverling, Daly & Gales,
Striebe & Foot,
Scheffey & Co., A. M.,
Spalding & Bros., A. G.,
Tillmann Magneto Dynamo Co.,
Union Cycle Co.,
United States Tire Co.,
Wilson-Myers Co.,
Warwick Cycle Co.,
Wilhelm & Co., W. H.,
Western Wheel Works,
Williams & Co., J. H.,
Warren Co., J. J.,
Waltham Mfg. Co.,
Wolff & Co., R. H.,
Weston & Co., I. A.,
Yost Mfg. Co.,
Warrick-Stockton Co.

The Salem Wire Nail Co., Salem, Ohio, announce that in October, 1894, the arrangement by which Peden & Co., of Houston, represented them in Texas, was discontinued by mutual consent. Since that time they have not been represented in that State, but announce that they have now arranged for representation by J. H. Shelly, of Dallas. He traveled for many years in Texas for the Beck & Corbitt Iron Co. and other concerns. This arrangement took effect January 1st, and as the gentleman named is well posted in the nail business, the company feel great satisfaction in securing him to represent them in that field.

Joseph Rodgers & Sons, Ltd., Sheffield, England, with American headquarters at No. 93 Chambers Street, New York, are sending their friends a handsome placard containing their trade mark, their well-known quotation "Cutlers to the Queen," and other matters serving to call the name of this old and famous house to the attention of the trade. The placard is very handsomely printed in colors, with raised figures and letters.

The popular Hardwareman, Joseph Steuernagel, of Steuernagel Bros., No. 298 Ohio Street, Allegheny, Pa., is again able to be out, after an eight weeks' siege with typhoid pneumonia. His many friends are pleased to see him around again. He reports business improving, and looks for good trade for the coming year.

Review of the Markets.

Money: The usual drain of gold during December is still a main point of discussion in financial circles, and it must be admitted that some apprehensions exist as to the continuance of these shipments in 1895. Usually the actual gold movement does not set in before January and February, at which time there exist reasons for an outward movement. During the present winter, however, this movement has taken place earlier than usual, and this naturally has created the uneasiness as to what will occur during the remainder of the year. It would be difficult to state what remedy might be applied beyond the one so often suggested, which is to cause renewed confidence in American stocks and bonds in the minds of European investors. It is a fact that this confidence does not exist in the degree that might be desired, and there is little doubt that Europe is returning our securities in no small quantities. One thing in our favor is that we have a large cotton crop this year as well as a large wheat crop, although Europe has not taken our agricultural products with that freedom which might have been desired. One ray of light upon the situation is that, in the long run, we will again have the confidence of European investors, and, as has been suggested, "will probably sell back to them at advanced prices the very securities we are now buying of them." The eyes of the financial world will be for some time turned with exceeding interest upon Congress. A little practical wisdom at Washington just now will be of great benefit to the general business of the country.

In Hardware lines little can be said beyond what was voiced in our last report. The invoicing now going on will, when completed, be followed naturally by renewed energy and an increase of business, the extent of which is dependent upon several questions. There is no possible doubt as to the retail trade throughout the country holding depleted stocks. It is a matter of history to every one that during the past year this trade has been ordering from hand-to-mouth, covering only absolute needs. This may also be said with truth of the jobbing trade. Naturally the manufacturers, because of these small demands, and of the uncertainty existing regarding legislation during 1894, have refused to accumulate stocks of goods. As a result they will be taxed to their utmost capacity when the demand comes with a resumption of the late winter business.

The general reports from all sections are that prospects are very much brighter now than they were at this time in 1894. One thing that seems to be needed, perhaps, as much as any other, is that some one shall guarantee that prices have reached rock bottom. It is the opinion of many well posted Hardwaremen that this point has been reached, but the cautious buyer is cautious still and refuses to take more than he absolutely needs, in the expectation that a reduced price may come at a later date. When the turn does come, and he thoroughly understands that the bottom point has been reached and passed, he will make active exertions to cover lost ground, and his very endeavors to secure goods before there shall be a further rise will accelerate the movement in that direction. We quote the opinion of one who has carefully studied the situation: "The present low prices of goods will have little effect in stimulating production, the limit of profit being too light to carry large stocks. Prudent buyers who know this and realize the importance of having their stock in hand when the season's trade opens, are now freely giving their spring orders. Manufacturers are more apt, they know, to take them when an absence of a regular demand permits them to run on longer time on special orders, and promise a positive date of shipment. More orders were turned down last year from actual inability to produce than will happen again, the orders having been given at too late a date to guarantee fulfilment of promises, the result of which has been to make the buyers this year more freely anticipate their wants, and this state of affairs is always advantageous to a manufacturer."

Coming down to details, we find that in Hinges, as far as prices are concerned, there appears to be no change. The business, however, shows a little more activity than it did this time one year ago. In Tacks, the demand now is about the same as it was for the corresponding period of 1894. Prices are fairly well maintained. In Locks, there is practically no change, and from present appearances there will be none during the season just begun. Prices are exceedingly low, and bid fair to remain so. Cabinet Locks are lower than ever before. Business in these lines is quiet just now, probably due to the fact that the different houses have been at work closing their books. The prospects are that the volume of business will increase as the season advances.

The nail market is very dull, as it generally is in January. There is no building going, comparatively speaking. Carloads on the dock are selling from 85 cents to 90 cents according to assortment. The dealers' stocks on hand are light.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

In the paint market, consumers have very little inclination to buy, because of the usual holiday lull. During this time manufacturers have taken the opportunity to close their works and give them the usual annual overhauling. The indications are that when business settles down again to its regular course, things will move with activity, and a good spring trade is looked forward to. Prices may be regarded as practically at a standstill. White Lead is low in price, Zinc and Dry Colors are dull, while Colors in Oil are having a good inquiry for this season of the year. There is practically no demand for mixed paints, and will not be for several weeks yet. The recent price list issued by the National Lead Co., which is subject to change without notice, is as follows: "Pure White Lead, dry and in oil, Red Lead or Litharge in kegs, in lots of less than 500 pounds, 5¾ cents net; in lots of 500 pounds and over, 5¼ cents. Red Lead and Litharge in barrels and half barrels, ¼ cent per pound less than price in kegs. White Lead in 25-pound tin pails, ½ cent; in 12½-pound tin pails, 1 cent; in 1 to 5 pound tin cans (100 pounds in a case), 2½ cents per pound above keg price. Terms: On lots of 500 pounds or more, 60 days, or 2% discount for cash if paid within fifteen days from date of invoice. Special prices for Dry White Lead in barrels."

In Red Lead several orders have been noted, with prices ranging from 4½ to 4¾ cents. In Litharge, rather more inquiry is reported from the glass trade, with little demand from the rubber factories. In Zinc there has been a better call since the year opened, although the demand is rather slack for home consumption. For jobbing, prices remain from 3¾ to 4¼ cents. German is rather dull, and is quoted at 4¾ to 4⅝ cents. In Barytes a slightly better condition has prevailed, and prices are now quoted at $16 to $18 for prime white. In Putty the output for the past month has

Digitized by Google

been considerably curtailed. Bulk lots may be had at $1.45 and $1.75. In colors in oil the demand is unusually good for this period of the year.

In Window Glass the month has been very quiet, and there does not seem to be an indication of an improvement until buyers begin to provide for their spring needs. There has been no change in prices. The discount on French is from 70@70 and 10.

Clapp & Co., bankers and brokers, New York, hail the advent of the new year in these words: "The financial giants, Industry and Economy, hail the dawn of 1895 with courage, The shadows of the night are not easily renewed in the light of day. Public funds or private purses are not endangered by making good dollars better or more plenty, or fixed charges lighter. American manufacturers, farmers and planters are not worrying over quality of dollars so much as quantity of profits. Uncle Sam's dollar is still better than its distribution or its distributor, but all can and will be improved. Straws.—Recent reports indicate wages are about 16.33 per cent. greater than in 1893, and 21.77 per cent. less than in 1892. About 14,692 failures in 1894 show liabilities of about 167¼ millions or less than half those of 15,242 failures in 1893, Merchandise imports, $436,021,173. Duties, $88,231,102. Net gold exports, 78 millions; silver, 34 millions. United States Sub-Treasury received $1,209,958,614.42, payments were $1,142,764,301.74, the gold withdrawn was $116,560,903. Silver, $10,767,639. Bonds.—About $134,785,000 new issues were listed on New York Stock Exchange in 1894, the last six months showing increase over first half. Total old and new issues, $259,884,600. Over 90 per cent. of the new issues were on Southern railways. Government bond syndicate sold about 10½ millions around 119. Choice bonds in good demand. Questionable in excessive supply. Only 1 per cent. of municipal bonds issued in past four years failed to pay interest."

THE BOSTON TRADE.

It is not expected that this, the first week of the New Year, will show any evidence of that increased activity which has been predicted during the closing week of 1894. The fact that traveling salesmen are all at home making necessary preparations for new conditions that may arise during the coming season, and that the energies of both their customers and employers are directed toward the closing of their stock account, are causes which always at this season materially interfere with the volume of business.

It is too early to predict with any degree of certainty what the present year will bring forth. If the condition of trade as reported by our contemporaries throughout the country is to be depended upon, there is much that is encouraging. We sincerely trust that at this time, when all are anxiously looking at the results of the past year, they may find a pleasant degree of satisfaction, and that the year just opening may bring to everyone identified with interests like our own an abundance of happiness and prosperity.

FRYE, PHIPPS & CO.

THE PHILADELPHIA TRADE.

The first of the year finds jobbers very busy in overhauling prices and samples for the coming year and footing up stock for the year that is past. Most salesmen are off the road for a few days, spending the holidays with their families, and business is ordinarily at a standstill for the first two weeks of the year.

The late cold snap, however, put a very different aspect on the face of things, and orders for skates, sleds and sleigh bells kept jobbers quite busy in a small way, and many thousand pairs of skates have been hastily shipped within the last few days. Of course it would have been better for the holiday trade if the cold snap had come two weeks earlier, but the demand for skates is so general it is quite evident that stocks of retailers are exhausted, and the probabilities are that there will be a good demand for skates next fall. It is generally felt that cold weather means good spring trade, as the supply of ice in the country is now generous, and refrigerators and ice cream freezers will doubtless be in good demand in consequence.

A comparison of prices with those of a year ago shows, as might be expected, very decided changes, especially on those goods which are near the raw material. It is evident this is realized by the trade, as already we have heard of some new stocks being bought, and the impression is general that it is a safe time to lay in stocks, and a more hopeful feeling, both as to trade and prices, prevails for the future.

Bicycles are also the subject of many inquiries, and the attendance at the Bicycle Show next week in New York promises to be large. It is surprising to what an extent this event is regarded as a trade matter, and it is evident that the promoters expect a great deal of business to result directly from the show.

BIDDLE HARDWARE CO.

THE DAVENPORT TRADE.

Values continue to shrink; the long looked for bottom to Hardware prices has not been discovered. Will some one advise the readers of HARDWARE the exact period when this phenomenon will appear?

Trade is very good, and better than a year ago. Collections are better than usual at this season of the year. The banks report business brisk, a very large percentage of time paper being paid promptly at maturity. A bank president says: "We have a large demand for money, and plenty of money for the demand, and no failures to report."

The Iowa railroad commissioners have been asked by the railway companies to advance the minimum rate of freight in the State, the final hearing occurring on the 28th ultimo. The matter is now under advisement, and the decision is looked for with vital interest by heavy shippers. Bids have been opened and are now under consideration for building a new and elegant city hall in Davenport. The chief of ordinance, U. S. A., has reported the necessity of a new bridge across the Mississippi at this point, with increased activity, asking Congress to appropriate $495,000 for this purpose. An effort is being made to establish a new telephone company here. At the United States arsenal here has been concentrated all the work of furnishing the equipments for the three branches of the service, that is, artillery, cavalry and infantry, including field and siege carriages of all kinds, excepting the ordinary transportation wagons, which are furnished by the quartermaster's department.

The holiday passed pleasantly; Santa Claus was kind to us all. We enter upon the duties of 1895 with increased hopes and vigor, and wish the readers and patrons of HARDWARE a very happy New Year.

SICKELS, PRESTON & NUTTING CO.

THE GRAPHITE INDUSTRY.

We have scarcely time before you go to press to properly transmit the result of the year's influence on our business. To put a communication into shape worthy of your valuable space, would require careful monthly comparisons which we cannot at this time accomplish.

To generalize: The year has closed quite satisfactorily, with steadily growing business, commencing in August; since which time the marked increase has done much towards an offset to the dullness of preceding months. This increase has been healthy and steady, covering all our Graphite productions, and notably in the line of Lead Pencils, Crucibles and Lubricating Graphite.

Early in the spring we established a Brass Department, fully equipped with the best of modern machinery, and later a plant for the manufacture of first-class rubber goods. These two departments, heretofore given to outside contractor, represent a large money outlay, and enables us to control a very important part of the business of manufacturing stationers' supplies; we mention it as an evidence of

Digitized by Google

our faith in the belief of a permanent return of good business.

Our vice-president, John A. Walker, spent several weeks in Europe during the summer, having had many pleasurable interviews with foreign business friends of the Dixon Co., and returned full of ideas and zeal by which we have profited.

The year closed with an encouraging line of orders booked for delivery during the next three months, and we are now running our three Jersey City factories, two Ticonderoga Graphite mills, and the Florida cedar mill on full time with the largest pay roll in our history. Collections are prompt with a disposition to take advantage of discount for cash. The regular semi-annual dividend to stockholders was paid January 1st. JOS. DIXON CRUCIBLE CO.

Jersey City, N. J.

E. H. PERKINS, Jr. President.
E. TOWNSEND, Cashier.

Judge Andrews, of the Supreme Court, granted a motion on the 18th of December for the appointment of a receiver for the firm of Peoli & Willey, Hardware and cutlery commission merchants, No. 97 Chambers Street, New York, in a suit brought by Daniel R. Peoli against Albert H. Willey, on account of disagreement of the partners. Mr. Peoli was appointed receiver by the judge.

Max C. Smith, No. 3611 Butler Street, Pittsburg, Pa., is one of those genial, whole-souled men sometimes met with, and those who drop into his Hardware store and spend a half hour with him, come away feeling the better for it. He handles Hardware, fancy and general; tinware, stoves, and house-furnishing goods—in fact, all that constitutes a good line in Hardware.

A change has occurred in the management of the Pickett Hardware Co., Warren, Pa. H. A. Jamieson becomes chairman of the company; E. T. Holmes, treasurer, and H. G. Stillwell, manager.

GOOD VARNISH costs money.

The Philadelphia Association's Annual Gathering.

The ninth annual banquet of the Hardware Merchants' & Manufacturers' Association, of Philadelphia, will take place on Wednesday evening, January 23d, at the Manufacturers' Club, on Broad and Walnut Streets, Philadelphia. The affair is in charge of the following committee:

Fayette R. Plumb, Chairman; William W. Supplee, Lewis W. Klahr, Samuel Disston, T. James Fernley.

The annual banquet of the Association has become a matter of great social importance in Philadelphia, and it is expected that the next one will compare favorably with those of other years. This Hardware Merchants' & Manufacturers' Association has grown rapidly during the past year, the gain in members being 79 per cent.

The annual election of officers for 1895 will take place on the 15th inst., the following gentlemen being nominated:

President, Wm. W. Supplee.

Vice-president, Samuel Disston.

Secretary and treasurer, T. Jas. Fernley.

Board of Directors—Charles M. Biddle, Samuel Disston, Fayette R. Plumb, Elmer E. Brown, William W. Supplee, Charles M. Ghriskey, John R. Griffith, Hugh McCaffrey, T. James Fernley.

At the last meeting the following were elected to membership:

Cleveland Stone Co.
New Castle Wire Nail Co.
Livingston Nail Co.

The Syracuse Cycle Co., Syracuse, N. Y., are sending their friends a 15-inch, boxwood brass rule, intended for use on the office desk. In a little accompanying circular headed "Keep your eye on the Crimson Rims," they say: "You may think this is intended for a Christmas present. It is not. Our purpose is to permanently photograph upon your memory the words Syracuse Bicycles."

The Cleveland Faucet Co., of Cleveland, Ohio, one of the largest manufacturers of brewers' supplies in the country, have located a branch office in Toledo. John Schultheis, for a number of years with B. A. Stevens & Co., Toledo, has been appointed general agent of the Toledo house.

The National Skewer Co. have put their factory at Jackson, Tenn., into operation, and will close down those of Marion and Muncie, Ind., and Geneva, Ohio. The object of this change is to get closer to the timber lands from which their supply is drawn.

The Barstow Stove Co., Providence, R. I., with branch offices in New York and Boston, are sending their friends a little candle, in the interior of which is found a roll referring to their line of Bay State ranges, furnaces and parlor stoves for 1895.

The Clinton Wire Cloth Co., Clinton, Mass., have just completed a new boiler house. The roof is of iron, covered with the Berlin Iron Bridge Co.'s patent anti-condensation corrugated iron.

Walter Adams, manufacturers' agent, has again resumed business at his old quarters, No. 116 Chambers Street, New York, handling the same line of goods as heretofore.

IF THE DUPLICATE ORDERS

which we are daily receiving for **New Clippers** are any indication of business, there is little doubt but we shall be crowded to our utmost capacity to supply our trade again this season, notwithstanding our increased facilities. The Hardware trade are beginning to realize that it pays to place their orders

FOR OUR BICYCLES

with the maker direct, as he gets certain favors and advantages which are impossible from any other source. We try to please our trade. If **any responsible** dealer will send an order for any one of our wheels, we will agree to send it promptly, and if he does not believe it to be worth the price we ask, he may return it at our expense.

GRAND RAPIDS CYCLE CO.,

BICYCLE TRADE RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Stores, Etc.

Aurora, Ill.—W. S. Frazier & Co., manufacturers of sulkeys, road carts, etc., will manufacture bicycles, making a feature, the first season, of a high grade wheel, to weigh 20 pounds.

Boston, Mass.—B. B. Emery & Co. have been appointed agents for New England by the Central Cycle Mfg. Co., of Indianapolis.

Bloomsburg, Pa.—J. W. Mann, Hardware, will add bicycles and bicycle sundries.

Brantford, Ont.—The Henderson Cycle Mfg. Co., of Brantford, are applying for a charter.

Buffalo, N. Y.—The Indiana Bicycle Co., of Indianapolis, Ind., have opened branch store.

Burlington, Vt.—John A. Manson & Co., new Hardware store opened. Will take up bicycles. Correspondence invited.

Chicago, Ill.—Mason & Mason Co., bicycles; incorporated by William H. Arthur, James F. Boland and Dana A. Mitchell. Capital stock is $25,000.

Chicago, Ill.—The Novelty Cycle Co., incorporated by Samuel F. Estell, William A. Estell and Charles J. Barnard; capital stock, $100,000.

Eureka Springs, Ark.—J. W. Newport has opened a new Hardware store, and invites correspondence with manufacturers of bicycles and bicycle sundries.

Fond du Lac, Wis.—J. E. Bean has lately leased a factory plant, and will manufacture the Uscyclometer, of which Mr. Bean is the patentee.

Geneva, Ohio.—Geneva Wheel Co., incorporated by A. F. Alderman, C. Q. Chamberlain, H. R. Swan, H. B. Gregory, W. G. Morgan, F. F. Foley and A. M. Tyler; capital stock, $30,000.

Grand Rapids, Mich.—The Fox Machine Co. will manufacture bicycles, devoting one floor to that manufacture exclusively.

Jamestown, N. Y.—The Cyclone Combination Cycle Co. will open a New York office in the Mutual Reserve Life Insurance building, No. 309 Broadway.

Keokuk, Iowa.—Keokuk Cycle Co. filed articles of incorporation.

Metamora, Ill.—John Bride will open new Hardware store, and will handle bicycles. Correspondence with manufacturers of bicycles and sundries invited.

Milwaukee, Wis.—The John Pritzlaff Hardware Co. will take up bicycles and will handle the Featherstone wheel.

Mitchell, S. D.—The Healy Hardware Co. will open a bicycle department. An employee has been sent to the factory of a leading bicycle company, where he will spend the winter, informing himself concerning the business of repairing.

Omaha, Neb.—The Western Bicycle Co. have opened an Omaha branch.

Peoria, Ill.—Rouse, Hazard & Co. will commence manufacturing bicycles in the upper story of their building on the corner of Adams and Harrison Streets, and will give employment to a large number of hands. They have booked a single order for a thousand machines. During the last year they are said to have sold over six thousand bicycles.

Philadelphia, Pa.—The Supplee Hardware Co. are organizing a bicycle department.

Philadelphia, Pa.—The Thorp Cycle Co. will open new salesroom at No. 1005 Arch Street.

Philadelphia, Pa.—A. G. Spalding & Bros., sporting and athletic goods, have opened new store at No. 216 Chestnut Street.

San Francisco, Cal.—E. C. Stearns & Co., bicycles, have opened a branch house, with S. C. Chapman as resident manager.

Shawano, Wis.—The Schweers & Nachtwey Hardware Co.; incorporated by John T. Schweers, Frank D. Schweers and Henry Nachtwey. Capital stock, $20,000. Correspondence invited with manufacturers of bicycles and bicycle sundries, looking to opening cycling department.

Sioux City, Ia.—Knapp & Spalding Co., Hardware, bicycles, sporting goods, are adding a complete line of bicycle sundries.

Sioux City, Iowa.—The Gillette Hardware Co.; incorporated by T. H. Green, T. H. Preston and C. E. Hughson. Capital stock, $20,000. Correspondence invited with manufacturers of bicycles and bicycle sundries, looking to opening cycling department.

Toledo, Ohio.—The Colton Cycle Co., incorporated, with Charles Kaufman, president; George B. Colton, vice-president, and F. A. Jaque, secretary and treasurer. This company's factory is two stories in height, 100 by 100 feet.

Wheaton, Minn.—Enterprise Hardware Co. opened new store. Will handle sporting goods, guns, ammunition, etc., and will take up bicycles.

Winona, Minn.—Harry Svensgaard is about to open a bicycle repair shop. Correspondence invited with manufacturers of bicycle sundries.

Changes and Removals.

Berryville, Ark.—W. R. Hamilton, Hardware, bicycles, etc., succeeded by W. R. Hamilton & Co.

Buffalo, N. Y.—The Buffalo Tricycle Co. have changed their name to the Buffalo Cycle Co.

Colorado Springs, Col.—Colorado Cycle & Supply House, H. Weber, proprietor, removed to No. 119 Pike's Peak Avenue.

New York, N. Y.—Gannon & Son, bicycles, etc., formerly at Thirteenth Street and Eighth Avenue, have removed to No. 1786 Broadway. They will handle Liberties in connection with a line of other makes.

New York, N. Y.—J. H. Robley, bicycles, No. 142 Chambers Street, removed to No. 1 Park Place, corner Broadway. He handles the Falcon Wheels, made by the Yost Mfg. Co., of Toledo.

New Goods and Improvements.

Brooklyn, N. Y.—The United States Projecting Co. have added equipment for the manufacture of bicycle tubing.

Carson City, Mich.—William J. Loomis, bicycles, will do a jobbing business after January 1st. He will also put on the market a bicycle chain lubricant. He will offer a high-grade wheel, to be known as the W. J. L. Special.

Elkhart, Ind.—The Buscher Mfg. Co.'s present bicycle factory building will receive an addition of 100 by 75 feet.

Everett, Mass.—The McCune Bicycle Co. are erecting a two-story factory building, 38 x 128 feet, on Broadway.

Rochester, N. Y.—The Sager Mfg. Co. are putting on the market a pneumatic pad for bicycle saddles.

Toledo, Ohio.—The H. A. Lozier Co. are erecting temporary buildings, and will shortly be in operation again. Claims against the insurance companies, of $226,568.66 have been allowed.

Miscellaneous.

Hartford, Conn.—The Hartford Machine Screw Co., of this city, will manufacture bicycles for the Lozier Mfg. Co., of Toledo, Ohio. whose factory was recently burned. The facilities at the company's building were found available, and the order is to turn out fifty machines a day, with the possibility of making one hundred. New machinery is being set up, and an increase of the number of hands from ten to twenty per cent. will be necessary for the Machine Screw Co. to carry out the contract. The work will last about two months, until the Lozier Co. get their factory in running order, and then the machinery will be sent to the West.

Kokomo, Ind.—Citizens have raised a large fund to be devoted to cash bonuses for locating bicycle and other manufacturing plants in this place.

Louisville, Ky.—Herman Hussman has accepted the Louisville agency for the Wheelmens' Protective Co. of New York.

New Bedford, Mass.—Negotiations are pending between the board of trade and the company manufacturing the Greyhound Bicycle at Brookfield, Mass., looking to a removal of the plant to New Bedford. A company will probably be formed, with a capital stock of $25,000, with privilege to increase same to $50,000. The company's plant is worth $9,218.79, which will be turned into the new company at $10,000.

Plymouth, Ind.—The Plymouth Cycle Mfg. Co. have increased their capital stock to $100,000, and announce that in future they will not sell to jobbing houses, but will deal directly with agents.

Pottstown, Pa.—Pottstown Light Cycle Co. have elected the following officers for ensuing year: President and superintendent, Wm. I. Grubb; vice-president, E. S. Fretz; secretary and treasurer, M. P. Grubb. Directors: W. I. Grubb, E. S. Fretz, Geo. M. Strohl, W. H. Reifsnyder, W. E. Maris. The capital stock of this company is $25,000.

Pueblo, Col.—The Pueblo Hardware Co. have accepted agency for the Pope Mfg. Co.'s bicycles. A bicycle repair shop will be added, also a full line of bicycle sundries, with the manufacturers of which correspondence is invited.

THE HANDY STOVE POLISHING MITTEN.

The above illustration will give a fair idea of its appearance. It will easily fit the hand, has a waterproof back, and the whole front is made of durable and soft sheepskin, tanned with the wool on. By using the Stove Polishing Mitten, blacking a stove ceases to be dirty and disagreeable, it will make a stove shine like a mirror. The Mitten is also useful for polishing household furniture. It cannot scratch the most delicate material or varnish, while the finest possible polish can be rendered.

The Polishing Mitten can be put to many uses. Sells to almost every person you meet, always gives satisfaction. Among the uses which it may be put are:

Polishing Stoves, Ranges, etc., it has no equal.
Cleaning and Shining Windows, Show Cases, and other Glassware, the Mitten is highly satisfactory.
Polishing Nickel-Plated Ware, such as Bicycles, Machinery, etc., the Mitten is becoming more popular daily.
Polishing Boots and Shoes, the Mitten is as much superior to a brush as a brush is to a stick. Where once used it is "a joy forever."
Cleansing and Polishing Furniture, use the Mitten and Dauber. The results are always pleasing.
Polishing Brassware, Tinware, etc., the Mitten serves the purpose better than anything else.

Manufactured expressly for the trade. They sell fast wherever introduced to HARDWARE DEALERS.
We will quote you low prices and only ask a trial order. 2 kinds of mitten and dauber made, both kinds samples 30c. to Dealers.

PERSISTENT

Enterprising people are beginning to learn the value of advertising the year round. The persistency of those who are not intimidated by the cry of "dull times," but keep their names ever before the public, will surely place them on the right side in the end. Think over the persistent advertisers you know.

OUR STEER HEAD BRAND

of Butcher Knives are made of the **Best Double Shear Steel** obtainable. The greatest care is exercised in every branch of their manufacture and every knife severely tested before leaving our factory.

They are made in sizes from 6 to 14 in. and are especially designed for butchers or others who want the best knife made, who know a good knife when they use it and are willing to pay a fair price for a knife that suits them.

Dealers are authorized to sell these knives with the understanding that if after a **fair trial** purchaser is not satisfied it is the best knife made anywhere he shall bring it back and get his money.

Necessarily such a knife sells at a high price, but it is the cheapest in the end, and there is a good profit to dealer.

No Disagreeable Odor. No Ashes Light and Heat in Abundance

No. 327. No. 3 Lift Burner.
Height, 33½ inches. Spread of Base, 12½ inches. Nickel Finish.

THE MILLER OIL HEATERS.

Just the Thing for All Time and Every Day Use. For Spring, Summer, Autumn and Winter.

They are an Assured Success, from the fact that the Lamps used are "The Miller Lamps" THE LATEST AND BEST.

IN THESE HEATERS YOU HAVE A HAPPY COMBINATION:

The Best Light. The Best Parlor Heater. The Best Cook Stove.

They are Clean and Odorless. Require no more care than an ordinary lamp. Cylinders of Russia Iron, with Removable Nickel Tops, or with Combination Heating Drum and Grate for Cooking. The No. 3 BURNERS have a FLAME OF 15 SOLID INCHES. "MILLER" HEATERS have outside SCREW ADJUSTMENT for regulating the Wick and PLUNGE MOVEMENT FOR EXTINGUISHING; each one is supplied with an extra Flame Spreader so that Lamp can be used for ILLUMINATING when not wanted as a Heater. All of the Best Material and Workmanship.

They will heat a large room perfectly. A tea kettle of water heated in a few minutes by removing canopy.

Perfectly Safe. They Cannot Explode. Oil Never Gets Hot in the "Miller" Heater. A Good Companion for a Cosy Nook. A Comfort on a Chilly Morning.

A MOST IMPORTANT FEATURE.

☞All the weight of the Cylinder rests solidly on the FOUNT and not on the BURNER in these Heaters.

In IMITATIONS of these Heaters the Cylinder is supported on the BURNER, a CHEAP and WEAK CONTRIVANCE, which makes it necessary to REMOVE THE CYLINDER for lighting and which renders it impossible or very dangerous to use the Heater for cooking purposes.

Send for circular showing Heaters with ovens for cooking. We have 12 varieties.

These Lamps hold One Gallon of Oil. Will Burn 12 hours. Easily Lighted by Lifting Top of Burner.

READY TO LIGHT, WITHOUT REMOVING CHIMNEY.

No. 328. No. 3 Lift Burner.
Height, 32 inches. Spread of Feet, 11¼ inches. Russia Iron with Nickel Lamp and Trimmings.

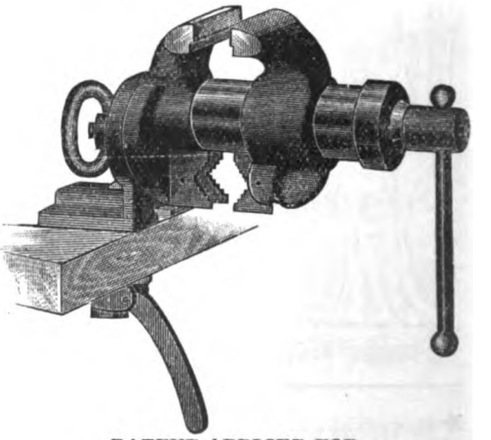
No. 1, Length of Jaw 4 inches.....$12.50

HOWARD COACH MAKER'S VISE.
FIXED.

No. 2, Length of Jaw 4 in., weight 37½ lbs....$10.00



PATENT APPLIED FOR.

UNIVERSAL COMBINATION WHEELRIGHT AND METAL WORKERS' VISE.

Length of Jaw, 4½ in., opens 4¼ in., weight, 83 lbs, $15.00.

UNIVERSAL COMBINATION VISES.

These Vises are very handy mechanical appliances for general use, as they combine two different and separate vises in one. They are made very strong, and will swivel in any direction. The "Combination Pipe and Metal Workers' Vise," for instance, will be found a very useful and practical instrument in every engine room, as the engineer, with the aid of a few pipe tongs and die plates, can, in most cases, do all the small repairing and fitting of pipes, etc, himself.

PATENT APPLIED FOR

UNIVERSAL COMBINATION PIPE AND METAL WORKERS' VISE.

No. 102. Length of Jaw, 4½ in., opens 4½ in., and will take from ⅝ in. diameter to 3 in. pipe; weight, 80 lbs.....$15.00
No. 103. 3-in. Jaw, opens 4¼ in., and will take from ⅝ in. to 2 in. diam. pipe, wt, 52 lbs.$12.00

These Vises have been manufactured by us since 1865 and meet with general favor. They are strong and simple. Every Vise Warranted. Liberal discount to the Hardware Trade. Orders solicited.

No More Broken Backs!

THE BALL BEARING "CLEVELAND" WRINGER.

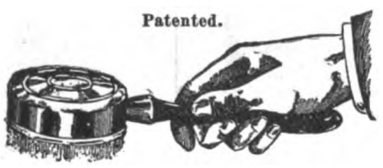
No Friction. No Purchase Gear.

Built on the same principles as a Bicycle and runs

Just as Easy.

A year and a half on the market has made this Wringer the *most popular* in Public Favor. A large line of the well known

PEERLESS AND METROPOLITAN WRINGERS.



Write for our Illustrated Catalogue.

THE PEERLESS MFG. CO., Cleveland, Ohio.

Also manufacturers of "TRIANGLE" BICYCLES.

THE BERRY CLOTHES SPRINKLER

Patented.

Fills automatically and will enable you to iron your clothes immediately after sprinkling, if you so desire.

For starched clothes it is unsurpassed.

It is an excellent sprinkler for house plants.

It is capital for laying the dust while you are sweeping.

Long used carpets can be made much brighter by putting a few drops of ammonia in water and sprinkling before sweeping. Retails for 25 cents. Liberal discount to the trade. Send for price.

THE BERRY SPRINKLER CO.,

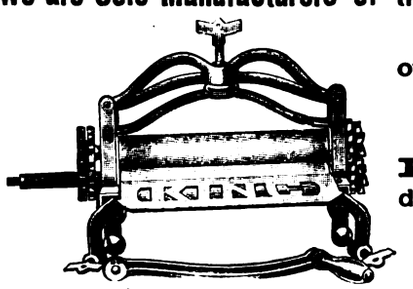
BROAD GAUGE IRON STALL WORKS,
53 Elm Street, Boston, Mass.

A Mistaken Notion.

It is a mistaken notion that a fine store in an eligible location, surrounded by attractive signs, is a superior advertisement; for the experience of the most enterprising merchants is that it pays better to spend less in rent and more on advertising.



There Is a Better Profit

To the dealer in this Wringer than in any other, and he can sell MORE OF THEM. Each one sold helps to sell more. Try it and see.

Reading Hardware Company.

SOOTENE SERMON No. 1.

SOOTENE means "against soot." It is used to prevent the formation of clinkers in coal stoves, and to reduce the amount of soot and cinders. A small quantity of **SOOTENE** scattered on the coal as you are preparing the fire insures complete combustion.

It is valuable too, for use in a wood stove, and the amount of soot that accumulates in the pipe is nil.

It pays a good profit and will become a rapid seller wherever introduced, and this is an important point to remember.

Hardwaremen's Exchange.

Notices of Help Wanted or Situations Wanted will be inserted in this column free of charge. Should not exceed Four Lines in length. Other notices, twenty-five cents per line.

Help Wanted.

WANTED—A man thoroughly posted in handling Builders' Hardware, reading specifications, taking quantities from plans, and familiar with its application to the work. Address, giving particulars as to age, experience and salary expected, Bordeaux, care HARDWARE, No. 143 Chambers Street, New York City.

WANTED—An experienced Builders' Hardware salesman. Must be capable of handling the trade through architects, etc. Address, giving age, experience and salary expected, Locks, care HARDWARE, No. 143 Chambers Street, New York City.

WANTED—Experienced salesman to represent staple line to the Hardware trade, upon commission in New York, Pennsylvania, West Virginia, etc. Address, "Business," care HARDWARE, 143 Chambers Street, New York City.

EXPERIENCED SALESMAN to travel and sell wire goods and solicit orders on iron work where necessary; state where last employed and salary expected. Address "Wire Goods," care HARDWARE, No. 143 Chambers Street, New York.

Situations Wanted.

SITUATION wanted as clerk in Hardware store, by a man who has had sixteen years' experience in a retail Hardware, stove and tin store as clerk and tinner. Am thirty-four years old. Can furnish good reference as to ability, honesty, etc. I desire a permanent situation; am willing to work; prefer position in a general Hardware, stove and tin store. Please state wages you can afford to pay. Address G. H. S., Box 332, Madison, Ohio, Lake County.

A COST clerk with several years' experience with Hardware manufacturing concern of national reputation, is open to an engagement. Understands book-keeping, correspondence, general office work, etc. Address Accuracy, care HARDWARE, 143 Chambers Street, New York City.

WANTED—By a young man twenty-six years of age, position in wholesale or retail Hardware store; experienced; best of references. Address W. A. F., 215 North Fifth Street, Brooklyn, N. Y.

PRACTICAL brass, iron and metal founder seeks position as foreman, superintendent, or otherwise. Thoroughly up on the economical production of castings and the handling of help. Good all around mechanic. Have superintended several Hardware manufacturing plants. Address N. Y. K., care HARDWARE, No. 143 Chambers Street, New York City.

SITUATION wanted as Hardware salesman; four and one-half years' experience in builders' Hardware, butchers' and grocers' supplies. Best of references. Address S. V. W., care HARDWARE, No. 143 Chambers Street, New York.

EXPERIENCED entry clerk and bookkeeper wants position with large concern where hard work and strict attention to business will ensure promotion and position. Has had four years' experience as a salesman in general Hardware. Address Hardworker, care HARDWARE, No. 143 Chambers Street, New York City.

POSITION wanted by an American. Age, 34. Bookkeeper, clerk or shipping clerk. Experienced in electrical supplies. Address G. F. M., care HARDWARE, No 143 Chambers Street, New York.

SITUATION wanted as Die-maker. Experienced in cutting, forming and drawing work, plain or combination. Address D. M., care HARDWARE, 143 Chambers Street, New York City.

Agencies for Hardware Specialties Wanted.

TO Manufacturers: A well established and pushing firm of manufacturers' selling agents of San Francisco can handle one more line of staples. Concerns wishing their business with the Pacific Coast increased may be assured of thorough and competent representation on a perfectly safe commission basis. References exchanged. Address "Pacific Coast," care HARDWARE, No. 143 Chambers Street, New York.

AN active, reliable salesman, having a large acquaintance among jobbing and retail Hardware, housefurnishing and department stores in New York, Philadelphia and the South, desires a manufacturers' agency. Specialties preferred. A-1 references. Address, S. B., care HARDWARE, 143 Chambers Street, New York City.

A BUSINESS man and salesman of twenty-five years' experience, capable and reliable, desires a manufacturers' agency—either Hardware specialties, supplies for gas, steam, water and oil, or a line of housefurnishing goods for domestic and export trade. Highest reference, given. Address Wallace, care HARDWARE, No. 143 Chambers Streets New York.

Side Lines Offered.

SALESMEN wanted to introduce our new novelty, a single article, light, and a free seller. Good commission paid. Address Moore & Co., No. 64 Reade Srteet, New York City.

WANTED—Traveling salesmen visiting stove and tinware, Hardware, house furnishing or plumbing and gas fitting trade, either retail or jobbing, will learn of something of interest by addressing B. J. W. & Co., Lock Box 47, Mercer, Pa.

A TRAVELING salesman who sells Hardware and can handle a side line upon a liberal commission, may find a profitable business by addressing "Side Line," care HARDWARE, No. 143 Chambers Street, New York.

WANTED—Traveling salesmen, to solicit the retail trade on a staple line of washing machines, of high grade. Liberal commissions to parties with good references. Horton Mfg. Co., Fort Wayne, Ind.

EXPERIENCED salesmen wanted to sell the best garden tool on the market. Sells to Hardware and implement houses; States, New York, Pennsylvania, New Jersey, Delaware, Maryland, Ohio; also for New England States. Address Lock Box 545, Rock Falls, Ill.

WE want traveling salesmen to carry as side line direct to retail trade, on commission basis, our line of Wire Hangers for garments. Commission liberal. Further particulars by addressing Barber-Koenig Mfg. Co., No. 115 North Vine Street, Hazleton, Pa.

Business Opportunity.

WANTED—An active, energetic young man who can command from $5000 to $8000 capital to enter into a co-partnership with an old established company. He will be wanted to take care of the finances of the company, and attend to the office business. This is an unequaled chance, and to the right man will present an opportunity that will be very valuable. Address XX, care HARDWARE, No. 143 Chambers Street, New York City.

GOOD OPENING—A chance for a good worker. A young man with a capital of $3000 can obtain one-half interest in a well established Hardware business, in a growing section of Brooklyn. Address V. M. C., Blythebourne, N. Y.

For Sale.

A FOUR-HORSE Power Gas Engine, in good running order; now in use by us at our stores. Edward Darby & Sons, 233 Arch Street, Philadelphia, Pa.

Manufacturers of Wire Specialties for the Trade.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded **ORANGE RIFLE EXTRA.**

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - 29 Murray Street, New York City.

THE SCHULTZE SMOKELESS GUN POWDER CO. LTD.

OF

LONDON, ENGLAND,

BEG TO ANNOUNCE THAT THEY HAVE PLACED ON THE

American Market

Their First Shipment of

HARD GRAIN SMOKELESS SCHULTZE GUN POWDER

Which has been specially regulated in strength and moisture for the American climate.

In the manufacture of their **Hard Grain** powder they have embodied all the advantages that their long experience together with the latest modern improvements in powder making has shown to be the very best.

HARD GRAIN SMOKELESS SCHULTZE POWDER retains all the good qualities which have made **Smokeless Schultze Powder** famous all over the world, while its hard flinty grain and specially regulated moisture makes loading so easy that any amateur can now do so successfully

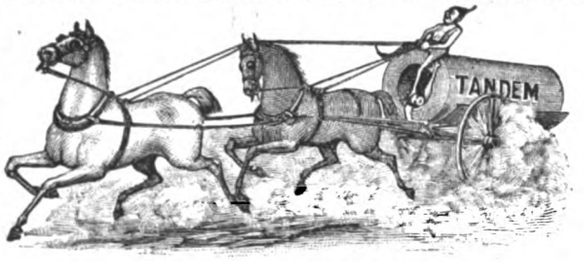
Variations in pressure on wads, or atmospheric conditions do not affect the shooting and loads may be varied as much as with black powder.

Hard Grain Smokeless Schultze is the most modern, the best of all smokeless powders, and excels any other Nitro powder in velocity, penetration, cleanliness, regularity and closeness of pattern.

Address all dealers, or the U. S. Agents

Von Lengerke & Detmold, 8 Murray St., New York.

1895



Columbia Bicycles, $100.
Hartford Bicycles, $80.
Wizards, $60, $50.

The above will unquestionably be the easiest line of bicycles to sell in 1895, and the dealer who has the exclusive Columbia agency for his vicinity will be fortunate. We invite correspondence with enterprising firms of good standing.

POPE MFG. CO.,

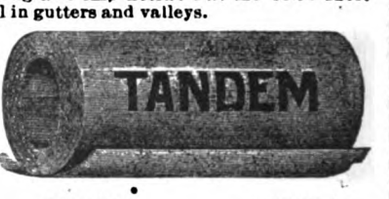
Continuous Roofing Tin.

CONSIDER EVERYTHING and see if you don't find it cheaper and better to use "TANDEM" than to use any other equal grade of roofing.



It is easier to lay than ordinary roofing and it makes a b-tter roof.

Our "TANDEM" is made in sheets 20 and 28 inches wide and 96 inches long. The seams are locked together, end to end, making a straight continuous course containing 100 square feet. The seams are soaked on both sides during the coating process, and are as strong and impenetrable as the solid sheet Such courses are particularly useful in gutters and valleys.

It is ready to use the moment you unroll it. No re squaring, no trouble, no lost time, no waste tin. Every inch of it goes directly on the roof in absolutely straight courses.

It affords a saving of labor and solder. A square of it will cover more roof than a square of 20x28 loose sheets. These are the reasons why every roofer should use it.

There are other points worth considering: (1) While all the plates are full weight (I C thickness), the shipping weight of a square of "TANDEM" is less than that the same quantity of 20x28 sheets. (2) We can ship direct to where the goods are to be used. If you're working away from home this saves freight charges double handling, and time If you care to know more about "TANDEM" CONTINUOUS ROOFING TIN write us. Prompt shipments can now be made.

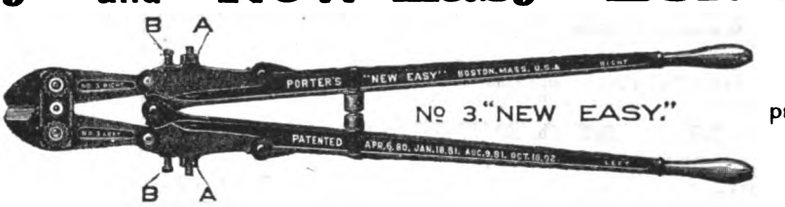
IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.



Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

BABBITT METAL.

We make Babbitt and Anti-Friction Metals by standard formulas, and never vary the formula to fit the price. The result is that our Metals are always the same uniform high quality, and we hold our trade.

Save fuel, machinery, time and annoyance by using Babbitt or Anti-Friction Metal that is adapted to the particular Journal in which it is to be used. Friction means loss of power.

Get our pamphlet on Anti-Friction Metals.

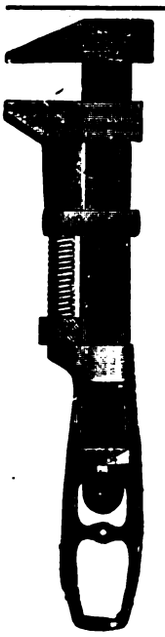
B. & W. SKATE SHARPENER.

—BEST SELLING IN THE MARKET.—

Handy to carry, does the best work, is made of malleable iron, full nickeled; the handsomest article of the kind on the market.



By its use the dullest pair of skates can be sharpened in five minutes, by any child old enough to skate.

In use, the side of the Sharpener forms a right angle with the file, making it practically impossible to file anything but a true plane on the skate, or to round the edges. As the file wears, it can be moved its full length on four sides, thus giving a great amount of filing surface. Put up one dozen in a box. Write for price.

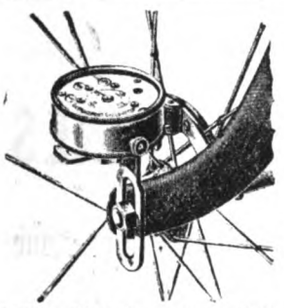
SUPPOSE



Your "ad." was here! You would read it with the other "ads." and it would be read by twenty thousand other people. Advertising in

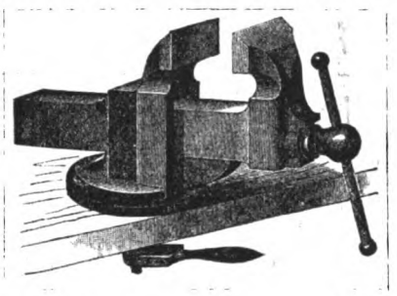
"HARDWARE"

is the cheapest, and most profitable, because its contents are brought directly to the notice of the Hardwaremen with nothing else to divert their attention.

Digitized by Google

HAVE YOU A MODEL 1894
BRIDGEPORT CYCLOMETER?
DO YOU WANT TO EXCHANGE IT FOR A '95 MODEL "A"?
Then Read This Offer.

Upon receipt of 60 cents with your 1894 Bridgeport Cyclometer we will alter same to our new improved 1895 Model "A," with celluloid face plate and enlarged figures, and return to you by mail. This includes cleaning and re-nickeling. **Also, we will change for 35 cents** a 28 in. instrument to a 30 in., or a 30 in. to a 28 in. if this amount is mailed to us with cyclometer. Remember that our guarantee makes good any defect found in our cyclometers which is not due to the owner. **BRIDGEPORT CYCLOMETERS FOR 1895** will be made in three styles and will be fully guaranteed.



Model "A" registers 1000 miles. Model "B" registers 1000 miles and has a bell attached which rings at every mile. Model "C" registers 10,000 miles and repeats, and cannot be set back to zero.

Sold by all dealers. Send for illustrated list.

OHIO "WATER TIGHT"

STEEL MORTAR and BRICK HODS

OHIO "Water Tight" Steel Hods are from 25 to 50 per cent. lighter when in use than the common wooden Hod.

Ohio "Water Tight" Steel Hod bodies are positively Water Tight. These bodies are the only ones made, folded from a single piece of sheet steel without cutting the metal, are reinforced on the edges and at the dumping point By our special devised machinery we are enabled to furnish the strongest, lightest, most durable and only double end mortar and brick hods offered to the trade.

Our improved Malleable Iron Fork and Wooden Shoulder Saddle make it easier for the user to carry, or to attach a piece of cloth, should he so desire, to the under side of the saddle than the old style.

With our improved one piece Malleable Iron Fork and socket for holding the hardwood handle and taking up the shrinkage, a broken handle can be readily replaced, and hods shipped knocked down.

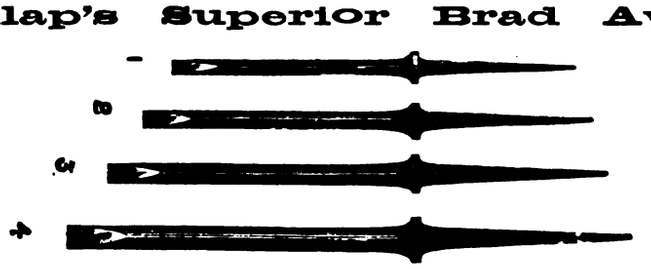
NEW YORK, 26 Park Place. BOSTON, 160 Congress St. PHILADELPHIA, Room 710, Betz Bldg. CHICAGO, 204 Masonic Temple.

Main Office and Factories, Meriden, Conn.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.



THE

AMERICAN WICK

Made by the WICK DEPARTMENT Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

THE ATTENTION OF "UP TO DATE" MERCHANTS

IS INVITED TO

A FEW FACTS SHOWING WHY

THE "WISCONSIN PEERLESS" REFRIGERATOR Is the **BEST** and Superior to any made.

IT is the only Refrigerator combining the following features, every one of which is an improvement over anything that has heretofore been used in a Refrigerator.

Seven Walls to Preserve the Ice, viz.:

1st, Outside case of Oak or Ash; 2nd, Building Paper; 3rd, Mineral Wool; 4th, Building Paper; 5th, Dead Air Space; 6th, Inside case of Odorless Wood; 7th, Zinc Lining.

It is the **only Refrigerator with a cleansable flue system that discharges the air from the provision chamber directly on to the ice,** thus getting the full benefit of its cooling properties. All other Refrigerators bring the warm air into the ice chamber at the sides or front, the air becoming cold naturally falls at once to the bottom and the benefit of the greater part of the ice is lost.

It is the only **CLEANSABLE REFRIGERATOR** that does not offer an obstruction to the warm, impure air rising from the provision chamber, by compelling it to pass, **either over a cold metal surface,** or else through a space from which cold air is being thrown off by the ice chamber or basket. **Cold air will not rise.** This is an established fact. In the "Wisconsin Peerless" the flues are faced with wood (thoroughly treated with pure shellac), so that the impure air will not be chilled before reaching the ice, **thus insuring the removal of all odors from the provision chamber.** If the warm, impure air is not taken from the provision chamber there is no circulation. **How can this be done if the air is chilled before entering the ice chamber?**

It is the only Refrigerator with **flues that do not have to be removed to be cleaned,** and which offer no obstruction to the circulation of air, and which help to preserve the ice by making an extra lid or cover for the ice chamber.

It is the only Refrigerator with an **Ice Rack that will not sag** or bend, forming hollows in the metal top; these hollows hold the water from the melted ice and so help melt the ice itself. The Ice Rack of the "Wisconsin Peerless" is formed of **Galvanized Steel Beams** which cannot bend or break with any ordinary usage.

It is the only Refrigerator discharging the drip water from the ice **at the front,** and outside of the Refrigerator. **By the use of our new trap the pan for drip water can be placed in plain sight at front of Refrigerator and all danger of overflowing drip pan is avoided.**

It is the only Refrigerator that has no Elm or other inferior wood used in its construction.

THE arrows in the above cut indicate the direction of the air currents. The top flue forms an inner cover or lid to the ice chamber, and assists to preserve the ice. The side flues are swung by open hinges at front and back and can be swung in or entirely removed to be cleansed as desired; the swinging arrangement is especially desirable in sizes where the ice chamber opens in front, as all that is necessary to be done is to simply raise the flue and wipe off the surface. Notice that there is not an inch of the entire flue system of the "WISCONSIN PEERLESS" but can be cleaned readily of all impurities.

"WISCONSIN PEERLESS" REFRIGERATORS

Possess more talking points than all other makes combined.

THEY ARE THE EASIEST TO SELL,

because the best. Every one sold means a friend gained.

Truss Bottomed FLAX FIBER Pails

Overcome all objections. They are not clumsy, partially water-proofed, brittle; their bottoms do not warp out, nor swell and shrink and get loose. They are strong, elastic, thoroughly water-proofed, more capacious than other makes, and handsomely finished; while the truss bottom holds up its load, but is immovably affixed to the pail. Every man and woman who sees wants them. To introduce them we will ship a trial two dozen to any dealer on receipt of $5.00, or we will send to him free, express charges prepaid, a sample pail.

Colonel Cockerill has discovered a new maxim in business philosophy by declaring that "It is oxide of *irony* to call a man a *rusty* cuss."

There is upon the bulletin board of the New York Hardware Club an announcement that the membership has already reached a total of 527 members. Contrast this figure with the modest beginning of three years ago, and one has a demonstration of what the Hardwaremen of New York can do when they set out upon a given task.

No Hardwareman of New York or vicinity who desires to keep in touch with the trade, and to aid in strengthening existing fraternal bonds, should fail to secure a seat at the Annual Dinner of 1895. The subscription lists are now open, and a note addressed to Chairman Clinch at his place of business, or at the Hardware Club, will be the means of securing to you not only an evening of pleasure, but also the consciousness that you have had part in an event that is of material service to the Hardware fraternity in more ways than one.

Our Hardware friends in Philadelphia have saluted the New Year with an annual election and banquet, and the friends who were bidden to sit down with them a few evenings since are filled to the very heart with appreciation of Quaker City hospitality. The association responsible for this gathering has learned by experience how things ought to be done; and when a stranger from afar is signalled to come unto them, he straightway, if a wise man, girds up his loins and takes the first limited express in that direction. We make use of some space to-day in reporting that gathering, but do not feel moved to apologize for so doing.

This is the month of trade dinners—that festive and pleasant season of the year when business men forget all except the social side of humanity, and collectively place their feet beneath the boards, in amity and good will with all the world. It is pleasant that, amid the selfish promptings and personal demands of business life, such seasons of reunion and fraternity are possible. They do not merely feast the body and soul of man, while he is a partaker of the good things they provide through *menu* and programme of speech and song. They last through all the year, and the fraternal bonds they knit are felt in pleasant drawings of men toward each other, all along the months that follow. Hail, then, to each of these successive gatherings! May they multiply in number and increase in their good uses with each year that passes.

The first month of 1895 has seen the bicycle men from all parts of the country moving in force upon Chicago and New York. The Shows which have been seen in these two cities are events that deserve far greater recognition from the daily press and the public than has been accorded them. They were not the mere gatherings of a host of riders, who set out, for prize money, to show their personal endurance, or the skill with which they could manipulate their two-wheeled steeds. The scope and purposes of their gatherings were of a far higher nature. Within these two exhibitions have been gathered the material evidences of a most remarkable mechanical advance—one of the most remarkable America has ever seen. The Bicycle industry of America is a thing of recent growth. A few years ago it hardly existed—to-day its capital is far into the millions; its army of employees number hundreds of thousands; its products are found, in countless numbers, scattered all over the face of the globe. These Shows have indeed been object lessons of remarkable force and power.

The student of the tariff may find food for reflection in a statement taken from an English exchange, in regard to the recent change in duties upon this side of the sea. "The returns," it says, "relating to the exports of steel and cutlery from Sheffield to the United States for the quarter just ended, indicate the extent to which the city has benefited by the reform of the tariff. The total of the exports shows that the quarter has been the best for five years, and that there has been a steady but continuous improvement since the new tariff came into operation on August 1st. During the earlier part of the year trade with the United States was practically suspended owing to the uncertainty as to the fate of the Wilson Bill. The present state of trade still falls lamentably short of what it used to be from ten to twenty years ago, *but every indication goes to prove that the*

Digitized by Google

Sheffield cutlers have by no means obtained the full benefit of the reduction of the tariff, and that their trade will continue to improve as the internal trade of the United States expands, which it is now doing. The exports of cutlery during the quarter amounted to £49,502, against £6,518 in the quarter ending June. Steel exports last year amounted to £69,670, or more than double the figures of the first quarter of the year. The total exports of all kinds from the Sheffield consular district last year amounted to £386,344 18s. 1d., being an increase of £12,000 on the year." The italics are our own; the promise of growth at the evident expense of American manufacturers is purely English.

A dainty and highly artistic monograph in pamphlet form, entitled "A Damascus Blade," has been prepared for distribution by Landers, Frary & Clark, New Britain, Conn., and New York. The pamphlet gives a history of steel and sword-making in mediæval times, as followed in Damascus, Toledo, Milan and Ferrara. It is claimed that Count Anossoff, Master of the Fabric of Arms, at Zlatoust, Siberia, after much study and many experiments, "has succeeded finally in reproducing Damascus steel of the original quality." Landers, Frary & Clark have secured a supply of this material, and have fashioned it into sets of Carvers, mounted in stag and ivory.

The Ausable Horse Nail Co., New York, have issued a handsome wall placard with calendar for 1895. It is printed in bright colors, and shows a shady country road with the "spreading chestnut tree" of Longfellow, under which "the village smithy stands." The smith is attaching the Ausable Horse Nails where they will do the most good. The various sizes of these goods are illustrated. The placard is one that will attract attention and assist in the sale of these goods when shown in the store or shop of any dealer handling them.

Underhill, Clinch & Co., No. 94 Chambers Street, N, Y., are agents for the Snell Mfg. Co., Fiskdale, Mass., for New York and nearby trade, and will carry a full assortment of goods manufactured by the company. These relations will not affect John H. Graham & Co., No. 113 Chambers Street, as they will still continue to act as agents for the Snell Mfg. Co.

The Troy Nickel Works, Troy, N. Y., are surprising their friends by the presentation of a genuine dimeandpin, as a reminder of the holiday season. The one that has reached the office of HARDWARE is the "real goods," of the vintage of 1888, and is preserved as a memento of a company that although "always cold," never gets left.

At the annual election of the Auburn Stove Foundry Co., in Lewiston, Me., January 11th, the following officers were elected: H. Wesley Hutchins, president; T. H. Roberts, clerk and treasurer. Directors, H. Wesley Hutchins, A. L. Goss, H. Fairfield, Dr. E. S. Coan, S. Record, George M. Briggs and George W. McFadden.

M. H. Tarbox, vice-president of the Boston & Lockport Block Co., speaking of business prospects, said: "Our business seems to be reviving to a certain extent, and our December business was quite a marked increase over December of '93."

The Syracuse Twist Drill Co., Syracuse, N. Y., are sending their friends a handsome and convenient little calendar, suitable for wall or desk, and finished in an artistic manner. They will be pleased to send these to any, upon application.

Canadian Hardwaremen.

The annual meeting of the Montreal Metal and Hardware Association took place January 10th, in the Board of Trade Building, Montreal. James Crathern presided. The president submitted the report of the past year, and it was adopted. It will be printed in the annual report of the Council of the Board of Trade. Customs duties and freight rates were discussed, but these matters were left to the consideration of the new Board. The election of officers resulted as follows: James Crathern, president; Thomas J. Drummond, vice-president; J. B. Learmont, treasurer; F. Fairman, James Phymester, William Macmaster and A. C. Leslie, directors. G. A. Irwin will continue to act as secretary.

The following gears were used by the leading Class B men, during the past racing season: Sanger, 76; Johnson, 72; Taxis, 72; Tyler, 74; Bliss, 68; Titus, 74; Miller, 72; Maddox, 72; McDuffie, 68; L. C. Johnson, 70; L. Callahan, 70; C. H. Callahan, 72; Allen, 72; Lumsden, 70; Githens, 72; E. C. Johnson, 70; Taylor, 68; Church, 72; Sims, 72; Cooper, 70; Cabanne, 70; Brown, 72; W. F. Murphy, 70; C. M. Murphy, 72; MacDonald, 72; Bald, 72; Kennedy, 72; Goehler, 72.

W. S. Maltby, the world-renowned exhibition cyclist, has returned from the Cycle Show at Chicago, after a most successful trip of the Northwest and Pacific Coast, in the interest of the Keating Wheel Co. While on this trip, he gave exhibitions in most of the cities, which helped wonderfully to show up the strength and riding qualities of the "Keating" and to book handsome orders for same. Mr. Maltby is exhibiting at the New York Cycle Show.

The Treasury Department has been notified that the board of general appraisers have advanced the invoice of a consignment of cycle tubes from the Mannessman Tube Co., limited, of Laviclove. These tubes were of the best quality, all stiff. They were entered at the combined discount of 75 per cent., 2½ per cent. and 5 per cent. The appraisers have advanced this discount to 75 per cent. and 2½ per cent.

The Gurney Refrigerator Co., Fond du Lac, Wis., in order to accommodate their large business in New York, Brooklyn and New Jersey, have established a branch office in the Pierce Building, on the corner of Hudson and Franklin Streets, New York.

The '95 calendar of the Boston & Lockport Block Co., Boston, Mass., and Lockport, N. Y., is a handsome creation. A fine engraving shows the United States battleship *Oregon*, which is fully described on the calendar.

Psalm of Advertising.

Tell me not in a sneering manner
  Advertising does not pay;
Rich are they who fling their banners
  Boldest to the world to-day.

Advertising done in earnest,
  Done with wisdom, heart and soul,
With determination sternest,
  Always brings the wished-for goal.

Lives of many men remind us
  We to great success can climb,
If the reading public find us
  Advertising all the time;

Advertising with persistent
  Energy to spread our fame,
Ever honest and consistent
  In performing what we claim.

In the world's commercial battle,
  In the rivalry of trade,
We must hustle, shout and rattle
  Ere impressions can be made.

—*Lewistown (Ill.) Democrat.*

Hardware in Boston Fifty Years Ago.

In the issue of HARDWARE last preceding, mention was made of the fact that Allen & Noble, Boston, had completed fifty continuous active years in the Hardware business. By our special request William Noble, of this firm, has set down some notes of the business of fifty years and his connection therewith, which are here given:

EDITOR HARDWARE: I entered the Hardware store of Alexander H. Twombly & Co., No. 4 Union Street, in 1832, as a clerk, at $50 per year (which was the regular pay of boys at that time), with $25 advance each year, and have not been out of clerkship or proprietorship since that time. The clerk did most of the work in the store, and we opened early in the morning and closed at nine o'clock P. M. The goods were mostly imported, orders being sent spring and fall, and some three months were required to have them received. Sheffield and Birmingham were the principal cities of supply. Most of the goods were shipped in casks and usually in good condition and on four months' time. Invoices were made out in pounds, shillings and pence. As I remember the duty was 30 per cent. I yet see the Sheffield cask, with large hoops, and the Birmingham cask of a smaller size. How we boys liked to open the cask! I can smell the English straw at this day. As years went on home manufactures came into the market. It was hard work to get the merchants to purchase the home goods. The imported goods paid better profit, the selling price being three for one on cost. If the cost was £1, the sale was for £3, which would pay a good profit after paying the thirty per cent. duty. At this time but little is imported, home goods having the field quite largely.

The wholesale trade of Boston was largely in Maine, New Hampshire and Vermont. In 1832 the goods were forwarded by large four and six-horse covered wagons, many of them bringing down the products of the country merchant coming to the city in spring and fall for purchasing goods. Goods for Maine we sent by sailing vessels largely; the merchants came by steamer. New Hampshire and Vermont came by the large wagons. As time went on changes took place, the railroad doing the business largely. The Hardware stores were located on Union Street, Dock Square, Milk Street, Liberty Square and near-by streets. I do not remember of more than five Hardware merchants now living who were doing business fifty years ago, and only two in active life at this time. A very usual custom was to go to the hotel every morning to find who had arrived in the city. The old hotels were Wildes', New England, Franklin, Earl's, Commercial and Tremont. The long trucks, hand carts and light wagons were in use. Many of the clerks came to the store before breakfast and went home to dinner and supper regularly, most merchants and clerks living within easy distance of their stores.

What changes have come in fifty years!

> "Old times have fled; old manners gone,
> And strangers fill the Stuarts' throne!"

WILLIAM NOBLE.

Boston, January 15, 1895.

He Takes One Horn, Emphatically.

EDITOR HARDWARE: In connection with the question of "Which Horn of the Dilemma," I am with your view of the situation unquestionably.

It is really a storekeeper's province to keep on hand the goods his customers need. To fill his establishment with anything and everything every sanguine inventor (and they all possess that temperament) wished a market for, would soon compel the dealer to date his letters from the poorhouse.

If the manufacturer cannot impress upon the mind of the consumer, by the usual advertising methods of the pushing American, how extremely important it is for the said consumer to purchase at once "Smith's Quadruplex Hand-Saw, which combines in one tool (see small bills) the essential advantages of a Rip, Hand, Panel and Back Saw," so that the consumer at once makes a tour of all the tool stores in search of one, wondering why so wonderful an article wasn't already on the shelves of every dealer in town, it only shows that the manufacturer is a poor advertiser, and hasn't himself become sufficiently convinced of his saw's unqualified merit, so as to push it by judicious advertising. We are a nation of readers, even the poorest of us can afford to peruse a "penny" paper, if we have a chance to read it only at lunch hour, and if the "Rip Van Winkle" inventor, and the "Robinson Crusoe" manufacturer will not inform the possible purchaser how greatly he is handicapped in his daily work, by not possessing this invaluable "Quadruplex Saw," it surely, in these days of small profits, should not be made the duty of a storekeeper, with a thousand and one other things equally as meritorious in their respective lines, and equally as profitable, to become a manufacturer's missionary for the distribution of unknown products.

Let the manufacturer who sees the possible fortune, which deserves to follow an extended sale, do his continuous advertising through legitimate channels which reach the workers, and thus make it necessary from the resulting demand, that the dealer to be "in the swim" must add the "Quadruplex" to his inimitable assortment of labor-saving tools, or else deserve to be counted among the conservative cranks, who would rather do anything than be "up to date."

ONE WHO HAS BEEN THERE.

New York, January 18th, 1895.

A Hardware Scion.

There is a boy of ten years of age attending school in New York who, among his other possessions, has a father who is a prominent and respected member of the Hardware trade. The youngster was directed to condense his views of education into a brief essay, and the result speaks quite well for the insight and originality of thought in a boy of that age. Many a person of larger growth has found things that "don't agree" with him. This is the result of his deliberations:

MY STUDIES.

"I think that my favorite studies are Latin and French History. Latin never used to agree with me, but I do fairly well now, and don't have to 'materialize after school,' as I used to. I think the fun is puzzling, and finally getting the translation, besides finding the basis of so many of our words. I feel like a conqueror when I have got the hardest sentence and got through the lesson with a ten. I often don't feel like one though.

"French History is very nice, because it's interesting and full of accounts of battles, with the particulars, which make it interesting, but I think that it is one grand mixture of kings being dethroned and of taxes.

"German is nice enough, and French too, though the time seems long and drags along very slowly, and the German stories are, some of them, very interesting, but French is just 'What is George doing,' etc., and is not so interesting. Arithmetic is very interesting, and I like to get the examples by a certain routine of rules, but I always was dull in it, and I don't believe I'll get along as fast as the ordinary boy would. Mental arithmetic I don't like, and never did, but I don't mind writing at all. I rather like it, and the things we have to write are very interesting and full of information. I like spelling and dictation very much, because they come as second nature to me, because they were drilled into me by my teacher before I came here. I like to read, and my father has to stop me often."

HARDWARE costs only One Dollar a year.

Further Building Information.

PEORIA, ILL.

Builders' Exchange: In reply to your favor I will say that the old Builders' Exchange is a thing of the past, but a few of the old members have got together and formed a new exchange, and their meeting place is now at No. 217 South Adams Street. As regards the building trade for the coming season, it is a little early yet to tell definitely what what will be done. There are a good many buildings talked of, and among those most likely to materialize are twelve to sixteen tenement houses by one party, and eight houses by another. Plans have already been prepared for two houses to be built on Perry Street by a Chicago architect. The new library, a building that will cost $150,000 to $200,000, is talked of, but up to this time no plans have been adopted for this building. The new city hall, a plan of which was adopted last fall, is one of the things that will probably be commenced this coming year. P. A. Weast contemplates putting up an office building on Jefferson Street, which will eclipse anything of the kind in this city. It is to be about ten storis high, and fire-proof throughout. The estimated cost is $200,000. There is some talk of putting up an opera house and hotel on the Rouse corner, by eastern capitalists. Should this scheme go through, it will represent an expenditure of something like $500,000. The scheme is a feasible one, and it will pay good interest on the investment, as it is one of the best corners in the city. In the manufacturing line, there are several industries that are figuring on locating here this spring, but nothing definite enough has been done to enable us to tell about what kind of buildings will be required. In regard to school-houses, I will say there will be built in Peoria the coming season three or more schools, one to take the place of the Cottage School, which will be a twelve-room building, to cost in the neighborhood of $40,000; one in Callender & Ayres addition on the Bluff, and one in the lower end of the city. Both of the latter will be eight-room buildings, which will cost about $20,000 each. There is a new High School needed, and as soon as the finances of the district will justify it, there will be erected a $100,000 high school in this city.

POOR IN SAN FRANCISCO.

Builders' Exchange: In answer to your letter of inquiry as to the prospects of building during the coming spring and summer, I would say that they are unusually poor, and not calculated to inspire any one with either hope or confidence. The combined action of the present national administration and the banking interests of this country and Europe, in their conspiracy to curtail the circulating medium of the country, in order to increase the purchasing power and value of the remainder, and thereby give them greater power through which to control the industry of the people, has so alarmed the thinking portion of them that they are afraid to enter, or continue to expand any branch of business where they have to depend upon the banks or money-lenders for assistance. All business of this city outside of the furnishing and retail of the necessaries, is practically dead. Then, too, we are in the grasp here of an octopus, in the shape of a railroad monopoly. We cannot manufacture anything, for which we have not a home demand, at a profit, for the reason that goods and wares can be shipped to points either within or without our State from either New York or Chicago to nearly all points from two hundred to three hundred miles distant from San Francisco, as cheap or cheaper than they can from San Francisco. Recent developments have convinced us that if our present government officials are not partners in interest in this monopoly, they at least are controlled by it, and we are not even asked "What are you going to do about it?"

WORD FROM OMAHA.

Builders' and Traders' Exchange: The prospects for the new year are not very flattering, but still I think they are brighter than last year. We are about to erect two new large theatres, and some other public buildings. Our Exchange has held its own in spite of the hard times, and expects to be found doing business at the old stand for some time to come. Our State has had a hard blow on account of the great drought, which affects this city on account of it being an agricultural State, instead of a manufacturing one, but we will pull through all right.

KANSAS CITY, MO.

Builders' and Traders' Exchange: The building business in Kansas City is picking up. There will be several business blocks put up in the business portion of our city in a short time, and also many residences. The building business has been better this winter than it has been for two years in this part of the country.

CINCINNATI.

Builders' Exchange: In regard to building prospects, they are much more favorable than in January 1894; more plans in the architects' hands, and contracts are being let much earlier than then. There appears to be more confidence among capitalists than last year.

"See That Curve?"

A poetic admirer of the Keating Bicycles has poetically embalmed his views and affections in the following:

The curve is the "line of beauty,"
All artists inform us 'tis true;
But the curve of the unmatched Keating,
Is of strength and beauty, too.

Mathematical curves were a bother
To every one of us once,
And made every mother's son of us
Think he was surely a dunce.

The problem of life is "dead easy,"
If one only "gets onto the curves"
Of the world and the people in it.
I am sure if one closely observes,

Whether it be in a ball game,
Into politics, business, or whist,
"Get onto the curves" of your rivals
And you'll see your name heading the list.

But of all the "curves you get onto,"
Not one your purpose will serve
To send you any faster
Than the '95 Keating Curve. C. A. S.

Fire in Bolt Works.

A fire caused by an oil furnace broke out in the eaves of the new factory building of the Pennsylvania Bolt & Nut Co., in Lebanon, Pa., on January 4th. The company's fire department was promptly called out, and soon had the flames under control. For a time things looked serious for the office, and the numerous clerks soon had books and papers safely stored in the vault, but fortunately the damage was confined entirely to the building where the fire started.

The building is entirely of frame, the roof raised in the centre longitudinally. The principal damage was done to the roof and rafters, and some of the shafting and belting. The nut and bolt machines escaped unhurt. The property is fully insured.

The American Tool & Machine Co., of Boston, have removed their plant to a more suitable building at No. 302 Federal Street. The company have reorganized, and many changes have been made. M. H. Barker has been made general manager, and M. M. Whipple, assistant general manager. W. O. Lincoln remains as treasurer.

The Baxter Stove Co., of Mansfield, Ohio, at the annual meeting elected a board of directors for the ensuing year as follows: J. L. Baxter, J. M. Baxter, E. C. Baxter, E. D. Baxter and B. A. Baxter. The board elected J. L. Baxter president; E. C. Baxter, secretary and treasurer, and E. D. Baxter, superintendent.

Porter to Partnership.—V.

To go from Ohio to New York thirty-five years ago was not quite such an everyday affair as it is to-day. We all travel to-day as if to be on the go continually was the natural end and aim of our existence. Among others of my hopes and dreams the one of some day seeing New York was gladly cherished, but I supposed it would be a great many years before the hope would be realized, and now it was here.

We went through the stock, making notes of goods running low or that were sold out, and after doing this in the order we reached the goods, we then drew the memorandum into another book, this time putting each article under the head where it belonged, so that it could be seen at a glance what was wanted in each line. Then Mr. Ely gave me a list of the houses he had ever bought of and of other houses of whom he had a favorable impression, but he emphasized the remark that he expected me to get the goods I bought at the bottom rates, and I was to buy where goods were cheapest without regard to any names he gave me. When all this was done I was given fifty dollars in cash and a draft on New York for one hundred and fifty, and I was ready to start off on what was to me a very wonderful journey.

If I had but some one for a companion, I thought, I would be perfectly happy, and when I reached the depot I looked anxiously around to see if anyone had a valise in their hands as if they were going on a long journey, but I could see no one but a man from Germantown, and I imagined they always carried a valise if they were but going to the next station; still I asked him where he was bound.

"Well, Marks, I pe goin' down to New York," was the unexpected answer.

"You are? So am I," I said, delighted.

"Pully, dat ish goot; we will go togedder."

My German friend was the leading man in the settlement, and reputed to be very wealthy. He had put up a saw mill and made many valuable improvements there, and I now remember to have heard that ten or fifteen German families were coming from the old country, and I concluded he was going to meet them as he had done with others. He had always been a good customer of Mr. Ely's, and he and I were on excellent terms.

The cars came and rattled away with us on board. The first hour of our ride was through country I was familiar with, so I paid more attention to my fellow travelers than to the scenery out of doors. Mr. Fischer went off to the smoking car, and though the car was pretty well crowded I had a whole seat to myself. At the first station of any size more people came in the car than went out, and a quiet, respectable looking old gentleman took the vacant seat beside me.

He was an extraordinarily modest old fellow, and looked as if one were doing him a favor merely to speak to him. I found that he was well acquainted with the towns we were passing through, their population and business, and yet he told me he lived in a large city at the eastern terminus of the road. We chatted away sociably, or rather I did, for he merely answered the questions I asked him, and in his company I passed away an hour. He left me at the next city stop we made, and when the conductor again came around I asked him who the man was I had been talking with, for I had noticed he and the conductor were acquainted.

"The old gentleman that just got off?" he asked.

"Yes."

"That's the President of this road."

I made up my mind I would be a little cautious with strangers hereafter, or I might get into trouble.

After Fischer had smoked about five hours he came in the cars with his face in a broad grin.

"Well, Marks, I had some fun."

"Did you? What was it?"

"I had some fun with the gamplers."

"Gamblers, on the cars?"

"Yah, on de gars. I know'd dey was gamplers right off, and dey dhry to dake one fellow in; one man says here you got de leetle yoker, und I pet you fife dollars you don't know him. Und dinks I, my fine fellows, I will gatch you, so I says here's fife dollars und dere is de yoker. Und py golly when he turn him up he was not the leetle yoker at all, but anoder fellow. Ha, ha!"

"You seem to feel good over it," said I.

"Feel goot? So I do; what's else? Shall I gry? No; I pets und loses, you don't got no more leetle yokers ofer me."

When evening came the cars were not quite so full of people, and we turned over the seat in front of us and fixed ourselves for the night. I have no idea how much I slept that night, but my impression was that I slept none at all. The starting and stopping of the cars, the calling out of stations, and the strangeness of the whole thing kept me awake, though Fischer snored beside me as if he was as comfortable as man could be.

When he awoke in the morning he began an inventory of his effects to see if he was all there; everything seemed all right, valise, basket, hat, shoes, necktie, watch, and then he felt for his pocketbook.

"Where ish my money?"

"Isn't it in your pocket?"

"No; my money ish gone; where ish my money?"

I said I knew nothing about his money; but he began pulling the bundles around and talked loud enough to rouse the whole car. Several men came over to us and looked at me as if saying I had the money. I tried to get some facts from Fischer, but he was almost wild with excitement, and would say in answer to every question "where ish my money?"

At last one man found it between the cushion on the bottom of the seat and the back; it had evidently fallen out of Fischer's pocket and worked down into this crack. I think I was as much relieved as he was, and his face brightened all over as he remarked: "I know'd it was somewheres; I will dake a goot schmoke."

A report comes from Taunton, Mass., showing that the industrial situation in that section is quite satisfactory. At the O. G. Thomas Foundry the employees are working on nearly full time, and business reported good. The repairs and alterations to the mounting and warerooms are nearly completed, and the former department has been enlarged by the addition of another story. The Weir Stove Co. are working full time, although few men have been let go. The employees in the Taunton Iron Works are still working but four days a week. An error in calculation in the repairing of the engine and accessories at the Copper Works has prevented the employees of the wire mill from going to work as soon as they expected, but the other employees are working nearly full time. The various stove lining manufactories are working on regular winter time. The Taunton Nickel-Plating Co. and the Taunton Crucible Co. are doing a good business, and the Cohannet Mills are running steadily.

The State Department is informed that under the new Ecuador tariff, which took effect January 1st, plows, ploughshares, picks, hoes, rakes, weed hooks and mattocks are to be reduced from two cents to one cent per kilogram. Cartridge shells will be lowered from two sucres to fifty cents per kilogram, and shot from two sucres to twenty-five cents per kilogram.

The 1895 calendar issued by the National Saw Co., Newark, N. J., is very attractive in appearance. The scene represented shows two sturdy lumbermen sawing a huge tree, with one of the company's famous cross-cut saws.

The Nicholson File Co.'s New Catalogue.

The Nicholson File Co., Providence, R. I., have issued a catalogue of their well-known products, which, aside from its value in presenting a line of goods famous the world over, is an artistic adornment to any office which may be fortunate enough to possess it. It is an art folio, rather than a catalogue, measuring 12x15 inches in size, bound in very heavy flexible boards, of a dark green color, with gilt edges, and bearing in heavy silver letters the words "Nicholson File Co., Providence, R. I., U. S. A." It is printed upon the heaviest calendered paper and is illustrated upon every page. The works of the company, both in Providence and Pawtucket, are shown upon the frontispiece, in handsome half-tone. Upon the opposite page are a group of sketches, showing the main office, president's office, the drawing room, library, treasurer's office, laboratory, experimental department and directors' room. Other illustrations scattered throughout the book show their handsome World's Fair exhibit in Chicago in 1893, which contained over three thousand varieties of files and rasps; a page in colors, showing the Nicholson boxes and labels; views of their factories, from various points of the compass; interior views showing their departments devoted to forging, clipping and press-forging, grinding, grindstone storage warehouse; illustrations of the old method of forging and cutting files by hand; their machine file cutting; their testing, inspecting and stamping departments; the making of file boxes; the packing, shipping and stock rooms; the general store room, etc., etc. The remainder of the book is devoted to a series of illustrations of their sections of file steel, Increment Cut files and rasps, X F Files, Manicure files, tools and specialties, file handles, etc., etc. At the end of the book we find a price list of Increment Cut files, and also of their X F files and miscellaneous goods. In speaking of these illustrations the company say that they are "intended to place before users and dealers a comprehensive display of the kinds of files now in use. Our aim has been to make all representations so accurate as to enable selections to be made as nearly as possible as if the files themselves were presented. The number of teeth shown is practically correct for the lengths of files illustrated. It will, of course, be understood that longer files of the same cut will have fewer teeth, and shorter files more teeth to the inch. The two pages of sections following embrace all the shapes in general use, and are carefully drawn to standard sizes." On page 25 is found a brief statement of their facilities, concerning which they say: "The facilities which the Nicholson File Co. possess for manufacturing files of every description and in any quantity are unequaled. It was the aim of the founder of this company to create a plant adequately equipped to meet any requisition for any file at any time, and the fact that we have for years past met all demands for files of any section, length, and number of teeth, shows that this aim was long since realized. Its extensive buildings were designed especially for this business, and constitute of themselves no small factor in promoting a high quality of product. Add to this the special machinery and systems of operation which represent the researches and inventions of the late Mr. Nicholson, and the adaptation to the uses of this company of all that was found of value in the machinery of four separate file companies, which was acquired by purchase, and we have a plant unapproached in the history of file making. This company's three factories, although separate, are under one management, and so systematized as to take advantage of every facility for reducing cost and improving quality."

Upon page 6 will be found a faithful and artistic portrait of William Thomas Nicholson, the founder of the Nicholson File Co., who contributed so greatly to the successful development of the machine file-making industry. This is accompanied by a brief biographical sketch of Mr. Nicholson, in which it is stated that he early manifested that love for mechanics which he was to afterwards put to such practical use. Previous to the civil war he engaged in the machine tool business, and it was while operating a machine-shop of his own that he developed his ideas on machine file making, and built his first file-cutting machinery. Believing that he could hope to make a success only by fully understanding the details of the business as it then existed, he devoted himself to the study of file-making in all its branches, carrying his investigations to Europe, which at that time supplied the greater number of files used in America, and where he spent considerable time investigating this and kindred industries, especially the manufacture and treatment of steel. In 1864 the Nicholson File Co. was incorporated, and proceeded at once to erect a plant at Providence, R. I. After many years of labor, and in the face of many discouragements, Mr. Nicholson found his business established upon a solid foundation, growing in size, and increasing its facilities. At a later date the manufacture of fine files for jewelers, watch-makers, and the finest work was added, and at the time of his death, in October, 1893, Mr. Nicholson had seen the original capacity of the company's works at Providence increase from a small beginning to over three thousand dozen files per day. In 1890 the Nicholson File Co. acquired the valuable plant for many years known as the American File Co., located at Pawtucket, R. I., about four miles from the principal factories. These works since coming into the possession of this company have been operated in manufacturing the "American" brand of files, and have a capacity of upward of 1200 dozen files per day. The products of the Nicholson File Co. have now a world-wide reputation; and when it is understood that they manufacture at their Providence factories alone over three thousand different kinds of standard files, and that each file is handled many times during its manufacture, some conception of the great detail of this business can be formed, and of the varied and complicated machinery necessary for economical production, as well as the credit due Mr. Nicholson for the persistency and inventive genius displayed in developing this industry. Mr. Nicholson has been succeeded by his son Samuel M. Nicholson, as president and general manager. Arthur H. Watson is vice-president, and George Nicholson treasurer. In a note concerning the company and its past, we find this promise for the future: "With the past before them, the present management propose to continue to merit the prefence accorded only after much hard work and struggling, and which once attained, has never departed from the Nicholson Increment Cut Files."

There is a nail foundry in Williamsburgh where the bellows under the forges are worked by five big mongrel dogs, who labor regularly a little more than an hour and a half each day. The dogs answer to the names of Joe, Peter, Rover, Jack, and George, and feed and sleep in the foundry. The animals tread inside a wheel eight feet in diameter, and when the time of one is up another takes his place, and for eight hours a day the wheel and bellows are kept going at the rate of about four miles an hour. In another foundry three dogs named Spot, Check, and Harness, work the bellows.—*New York Sun.*

The New England Pin Co., at Winsted, Conn., have placed a contract for the bridge connecting the two departments of their works with the Berlin Iron Bridge Co., of East Berlin, Conn.

Saturday, December 22, 1894, the Cortland Foundry & Machine Co. was organized, with a capital stock of $15,000. The future of Cortland as a manufacturing city is very bright.

The G. H. Grimm Mfg. Co., of Rutland, Vt., is running day and night to complete orders for 50,000 sap pails.

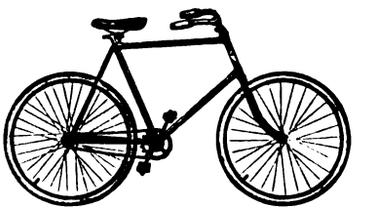
Digitized by Google

The Columbias and 1895.

The Pope Mfg. Co., Hartford, Conn., Boston and New York, have, as usual, ranged up in the front line with their Bicycle announcements for 1895. It is needless to say anything in regard to the quality of the Columbia wheels, or the great company by which they are produced—both are known wherever a rubber tire touches the earth, or a pedal is pushed by the foot of a cycler. The products for 1895 are in all respects held up to the former high line of advancement and development, and we are permitted herewith to illustrate and describe some leading features thereof. In presenting these wheels to the Hardware trade, the company say:

"Good and satisfactory as Columbias have been in the past, they are far better and more satisfactory in 1895—models of lightness, strength, and graceful construction, beautiful in design and finish, and embodying improvements that will captivate every lover of bicycling. Our action in the fall of 1894, whereby the standard price of Columbias, and therefore the highest limit of price for any bicycle, has been placed at $100, was prompted by the belief that the public should reap the benefit of the great improvements in processes of manufacture and by the certainty that at this price few buyers would consider a substitute for known Columbia excellence. Another step toward more fully meeting the needs of the public is the offering by us this year of the Hartford Cycle Co.'s product, lower-priced bicycles that have won an enviable place among all rivals. The Hartford Cycle Co. is owned and directed by us, and we can fully and understandingly recommend all machines of its make. Our entire line of Columbias and Hartfords is new in design and construction for this season's requirements. All our bicycles are sold at fixed prices and under our guarantee, and in buying them you have the double assurance that no one buys cheaper than you do and that nowhere else can you get higher quality or better value for the price you pay."

The following are some of their wheels, with explanation and description which the makers have kindly furnished:

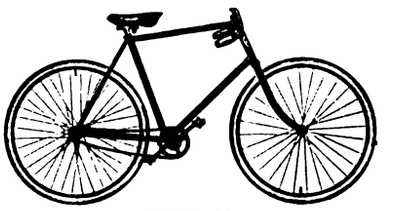


MODEL 40.

This is the finest example of light and high grade bicycle construction ever put out for the general use of the great riding public. It is made with three heights of frame, 25, 23 and 20 inches, for riders whose leg measurement to the floor is respectively 34, 32 and 29 inches and upward. Columbia nickel-steel rubber tubing. Gear, 63, 66, or 70. Columbia rat trap or rubber pedals. Adjustable handle bar. Weight, 21½ pounds.

MODEL 41.

Every appropriate feature of our splendid new men's machine has been introduced in this most graceful wheel for ladies' use. No ladies' bicycle will be found more fully equipped or more safe and comfortable. It is fitted with guards, rubber pedals, foot rests, and brake work, or it can be stripped to correspond to Model 40. Weight, as shown above, 21½ pounds.



MODEL 42.

This machine is especially intended for the large number of riders among the gentler sex who prefer to use the rational or knickerbocker costume and ride the diamond frame safety, which, for the same degree of strength, can be made lighter than the loop-frame machine. Model 42 is equipped with 26-inch wheels, and is without question the most elegant bicycle of its class in the world. Weight, 19½ pounds.

MODEL 43.

Our new and very light Tandem embraces the best accepted ideas in bicycle construction. The new Columbia nickel-steel tubing gives it great strength, and it will safely carry two riders of more than average weight. Adjustable throughout to suit the needs of all riders. Bottom steering connection. Weight, 38 pounds.

MODEL 44.

The Columbia Racer embraces all suitable features of the other Columbia models, but refined in construction and weight to adapt it to its especial use. Its construction is of the most reliable and careful kind throughout, and the machine is worthy of the wide confidence it is certain to receive. Gear, 72. Weight, 17½ pounds.

HARTFORD PATTERN 1.

This machine, while not so good as a Columbia, is the equal, if not the superior, of most other bicycles listed at $100. Its design and construction embody the most advanced ideas, and it is a worthy and graceful machine. Two heights of frame. Weight, 24 pounds.

HARTFORD PATTERN 2.

A ladies' bicycle of highly attractive design, but of lower cost than the superb Columbia. In durability, ease of running, and excellence of fittings it is not equaled by any other medium-priced machine. Weight, 24 pounds.

HARTFORD PATTERN 3.

This bicycle fully meets the demand for a low-priced bi-

Digitized by Google

cycle, yet of good quality. Durability has not been sacrificed, and in ease of running and equipment it will be found highly satisfactory. Gray Wizard single-tube tires. Weight, 27 pounds.

HARTFORD PATTERN 4.

This is, without question, the most desirable low-priced wheel made for ladies' use. Its many good qualities and its handsome appearance commend it. Nothing has been sacrificed to cheapness, and the machine is extremely easy running and durable. Gray Wizard single-tube tires. Weight, 27 pounds.

HARTFORD PATTERN 5.

A well-made, easy running machine, sufficiently strong to withstand occasional hard usage. It will prove very durable and economical. For boys and small men. Weight, 24 pounds.

HARTFORD PATTERN 6.

Carefully designed for the use of young misses, especial attention having been given to securing extreme ease of driving. Its strength is sufficient to permit its use by small ladies. Weight, 24 pounds.

NEW FEATURES AND TIRES.

"We call particular attention to the new features in design and construction embodied in our new machines, notably in all the Columbias—the new narrow-tread crank shaft bearings with ⅜-inch balls and light continuous cranks, improved chain and sprockets, large tubing and hubs with removable ball cases, adjustable handle bar, Columbia nickel-steel tubing, and special handles and saddles. The Columbia single-tube tire is used as the regular equipment of all the foregoing machines. In speed, durability, ease of repair and satisfactory service the Columbia single-tube surpasses all other tires, causing its users less annoyance and expense than any other. The special fabric which we now use adds greatly to the speed and resilience of the tires. For those who prefer a double-tube tire we offer as an option on all our bicycles, except the Hartford Patterns 3, 4, 5 and 6, the well-known Dunlop, which is readily detachable and the most practical tire of its class. We make it, as we do our famous single-tube tires, in our own rubber mill, of the most carefully selected materials and under our special and well-proved processes."

The 1895 Premier Line.

The Premier Cycle Co., whose fine wheels have been well-known to the cycling world for years, is a thing of the past—but from its ashes has arisen Phœnix-like, a young giant of pure American birth, the Premier Cycle Mfg. Co., with Llewellyn Johnson as president; Henry C. Douglas, treasurer, and W. P. Case, secretary. The company are building a line of American-made Helical Premiers for 1895 that will be thoroughly up-to-date, and, as heretofore, of the highest grade, "all constructed of their famous Helical Tubing and with every modern improvement which American ingenuity can devise." The line comprises:

A Helical Road Racer, 28 by 28; fully guaranteed for road use; weight all on, 20 pounds; price, $100.

A Helical Roadster, 28 by 28; up to any weight rider; 25 pounds, with brake and guard on; price, $100.

A Helical Ladies' Premier, 26 by 26; weight all on, 22 pounds: price, $100.

A 17-pound Helical Path Racer; price, $100.

The Premier Cycle Mfg. Co. exhibited a full line of the above patterns at Stand 68, National Cycle Show, also a new adjustable handle bar invented and patented by the president, which can be adjusted on the road without stopping or using a wrench.

The Davis & Stevens Mfg. Co., Seneca Falls, N. Y., have issued and circulated their 1895 calendar. It illustrates their line of Cyclone and Tornado Bicycle Pumps.

North's Electric Pull Expert Trap.

The Chamberlin Cartridge & Target Co., Cleveland, Ohio, are placing upon the market the effective and attractive article here shown. It is Paul North's Improved Electric Pull. It is for use with their new Expert or Extension Spring Trap only, and is described as "simpler and better than the old pull, and has the novel improvement of setting itself automatically." In speaking of this article they say: "The new combination of the improved Expert Trap and Electric Pull will be highly appreciated by all lovers of perfect outfits for target shooting." They further say: "The most essential feature in the enjoyment of trap shooting is a first-class trap; and from the time we began business, we have constantly improved our traps, till, at the present time, there are but very few if any others in use. Our Carrier, as used for the last five or six years, has proven so satisfactory in every respect that we see no room for improvement in that regard. Our Expert is acknowledged to be the most perfect trap ever made, and this year, by some minor changes in its construction, we have overcome the few mechanical defects of the old trap, and believe that it cannot now be equaled. These improved traps cannot be used with our old Electric Pull. Our Electric Pulls are the

only satisfactory pulls in use, and the test of time has demonstrated that they are far superior to any rope or wire device. Prices of Electric Pulls only, complete with wires and battery, for one trap, $10; for three traps, $25; for five traps, $30.

"Inanimate target shooting has rapidly grown in popularity since the days of the glass ball, and at the present time is one of the most popular and healthful of out-door sports. The increase in its interest has been very rapid in the last few years, and has been caused by the very great improvements in targets and traps, and the greatly reduced prices for them, and also by the fostering care and encouragement given by the manufacturers of the many different articles pertaining to the sport."

The Winchester Repeating Arms Co.'s calendar for 1895 is really a work of art, and will appeal to anyone having a drop of sporting blood in his veins. The upper portion is a scene entitled "Success." It shows two hunters looking with pardonable pride upon a huge bear that has fallen a victim to their prowess and the unerring aim of their Winchesters. The lower part, entitled "An Unexpected Chance," shows a hunter taking careful aim at a buck as he stands on the shore of a lake.

The Laughlin Nail Co., of Wheeling, W. Va., have let the contract to Totten, Hogg & Co., of Pittsburg, for the erection of a tin-plate mill in connection with their plant, which, it is said, will be the largest and most complete in the United States. There will be tin mills and dipping capacity in proportion, and the buildings, which will be all of steel, will accommodate seven more mills.

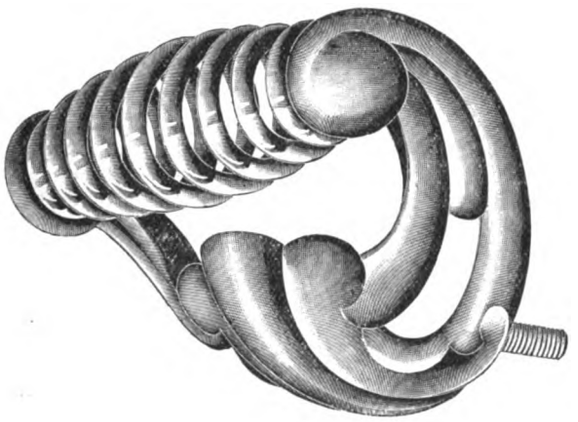
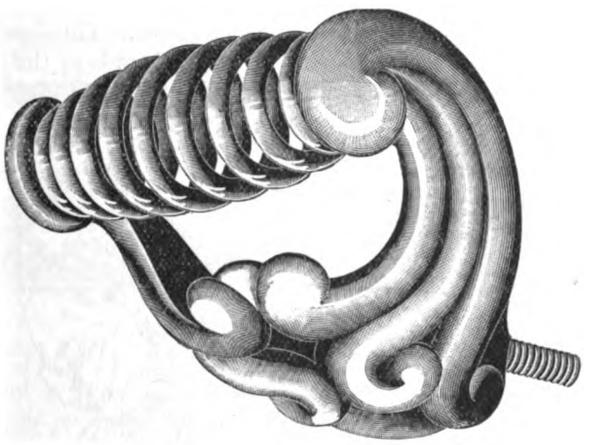
NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.



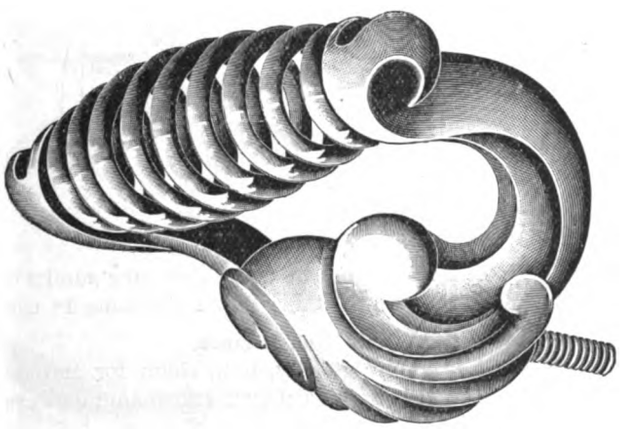
NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

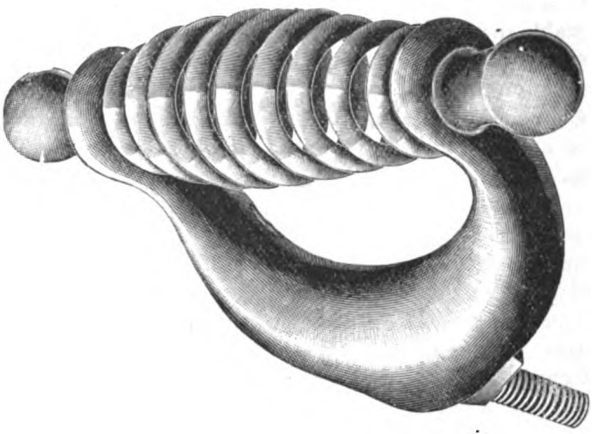


The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

More "Alaska" Specialties.

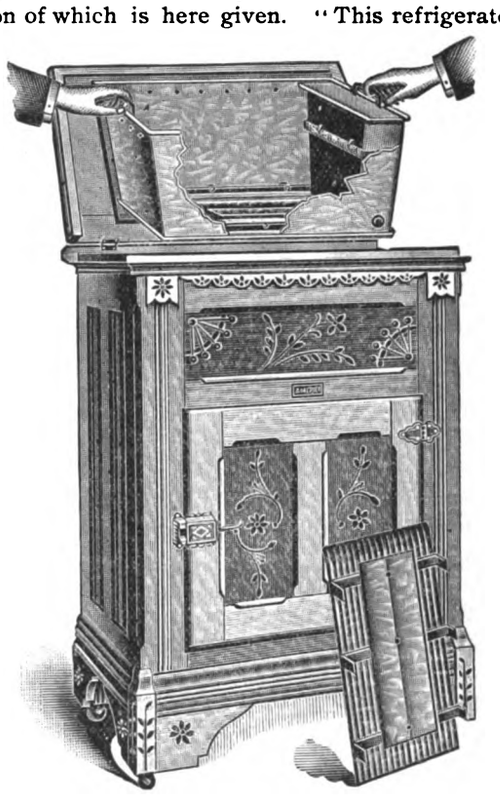


The Troy Nickel Works, Troy, N. Y., in keeping with their purpose to always have some improvements in the famous "Alaska" line under way, have just brought out



several interesting novelties in the handle line. We are permitted to herewith illustrate a handsome quartette of these. The "Alaska" principle, it will be seen, is carried

out in these in an artistic manner, the "always cold" idea speaking for itself in them all. The products of the Troy Nickel Works need no introduction to the Hardwaremen of



America. They are known wherever hot stoves with cool handles, pokers, lifters, shovels, etc., are needed, and have made their way into the trade upon their own merits. As has been said truthfully, if somewhat jocosely, of these goods: "Dealers everywhere from East Machiasport, Me., down to Ellenberg, Wash., and from Oswego, N. Y., to Pass Christian, Miss., have been favored time and again with interesting advertising novelties bearing the John E. Gaitley ownership branded on their face, such as that clever little Roly-boly game, or later, the direfully suggestive jail key. Everybody thinks the Alaska line is everything that it ought to be, i. e., everybody thinks so except the Troy

Nickel Works, who sit up nights and spend more money than it would cost to keep a Vanderbiltian steam yacht every year, simply to improve their already grand line. The old days when housewives used rags for handling pokers, etc., have passed away and the up-to-date dealer finds 'Alaska' goods as much a staple as axes, cutlery or nails." Prices, etc., will be secured by dropping a line of enquiry to the company at Troy, N. Y., or to almost any jobber in the country.

The America Refrigerator.

The Bowen Mfg. Co., Fond du Lac, Wis., manufacturers of refrigerators, have recently introduced the America, illustration of which is here given. "This refrigerator has

a removable galvanized ice compartment that is constructed in such a manner as to insure cleanliness. All parts of the ice chamber with the shelves are easily removed for cleaning. A great feature is the drainage. The four walls of

Digitized by Google

the ice chamber are constructed to form a tank, with an opening in the bottom, through which the cold air passes into the provision compartment. Each wall is flanged at its upper end, from which it is suspended to a rabetted frame in the casing; its lower ends are bent inwardly, then upwardly, forming a trough which extends entirely around the bottom of the tank. All the waste water is forced into the narrow channel of this trough, and consequently will flow out of the refrigerator quickly. By this process, there being less moisture retained within the refrigerator, dryer air is secured, less ice is used. The patent porcelain-lined water cooler, illustrated in the cut, is hooked to a band of iron connecting the front and back walls, and is as easily removed for cleaning as all other parts of the ice chamber. A portable drip pan is suspended to the bottom of the tank and makes it impossible for moisture resulting from condensation on the outer walls of the tank to drip into the provision chamber. Mineral wool, the best non-conductor of heat and cold known, is used in filling the walls of the casing."

Marlin Repeating Rifles, Model 1894.

The Marlin Fire Arms Co., New Haven, Conn., are offering repeating rifles, model 1894 here illustrated. The new model is practically the 1893 rifle adapted to the sizes 32-20, 38-40 and 44-40. The manufacturers state that the most important improvements made in the rifle are that the firing pin is cut in two, and that when the action is closed the two pieces are in a perfect line. The slightest movement of the finger lever pulls back the firing pin, and the front end of the rear piece drops into the slot in the breech bolt where the locking bolt works. With the firing pin in this position

FIG. 1.

FIG. 2.

it is held back, and it is impossible to drive it forward until the breech bolt is closed and locked by the locking bolt, which can only take place when the entire action is locked. If in assembling the rifle the locking bolt should be left out, the rifle cannot be fired, thus preventing any accidents of this sort arising from ignorance or carelessness. The automatic lever catch has been placed at the front end of the lever to avoid the protruding safety catch. These improvements, it is stated, do away with the safety catch, which projected through the lower tang in the 1893 rifle. The locking bolt in this model does not project at all, being within the receiver at all times; this makes the rifle neat, as there are no catches, links or bolts to interfere with the hand. The trigger is in one piece instead of consisting of a trigger and sear as in the 1889 model. This does away with all play about the trigger. The new "take down" rifle is made in 32-20, 38-40, 44-40, 32-40 and 38-55 calibres, with all lengths and styles of barrels and magazines, straight or piston grip. This rifle is practically the same as the regular rifle, with the exception that the barrel may be detached. This rifle may be taken apart by drawing out the magazine, throwing forward the lever to remove the breech bolt from the barrel, loosening the cans and unscrewing. It can be put together as easily as it is taken apart. Fig 1 shows the new 1894 model. Fig 2 the "take down" rifle. Complete catalogues describing these rifles can be obtained from the manufacturers.

The Bischoff Oil Can.

Fred F. Bischoff, Libertyville, Ill., is manufacturing a

FIG. 1.

new Oil Can which he feels will recommend itself. "The can is made of No. 27 gauge steel, galvanized. The outside is lightly embossed, which strengthens and adds to the appearance of the can. The use of the rubber tube admits of no waste." Fig. 1 shows the Can; Fig. 2 the same in use.

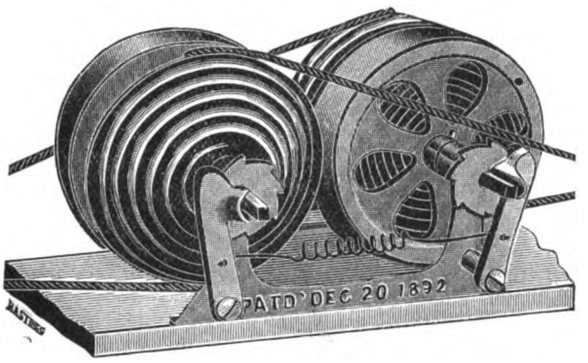


FIG. 2.

Columbian Sash Balance.

Bertsch & Co., Cambridge City, Ind., claim for the Columbian Sash Balance, of which they are the manufacturers, the following points of excellence: "It exactly balances the sash at any point, and works without a friction screw, and will balance a sash of any weight from five to twenty-five pounds, and, by a slight variation, from one to one hundred pounds or more. It requires no pockets nor pul-

Digitized by Google

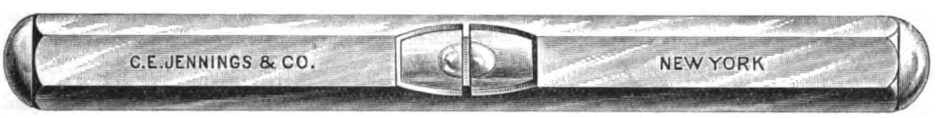
leys in the pulley stiles, and requires no space between the window frame and studding, thus allowing the plastering to be joined closely to the window frame, while the frame may be nailed firmly to the studding. It can be adjusted (made strong or weak), simply by use of the key, there being two key holes through the casing head, one opposite each shaft,

which holes may be ornamented with a silvered or nickeled ferrule or escutcheon. There is but one cord to each sash, one end of which is secured at one corner of the sash, and the other end at the other, while the middle of the cord is in the middle of the Balance, consequently no slipping can occur."

New Levels.

C. E. Jennings & Co., No. 79 Reade Street, New York, are placing upon the market a new line of Levels which they describe as superior articles. These Levels are hexagonal in shape and nickel-plated. Figs. 1 and 2 show Levels, 3 and 5 full size. Fig. 3 shows an improved Iron Level double plumb. This Level, it is stated, is broader on the edges and less in height than most levels, which makes it steadier and is carefully tested and positively accurate. Nos. 3 and 5 cost $3.60 and $6 per dozen. The double plumb costs from $18 to $24 per dozen.

FIG. 1.



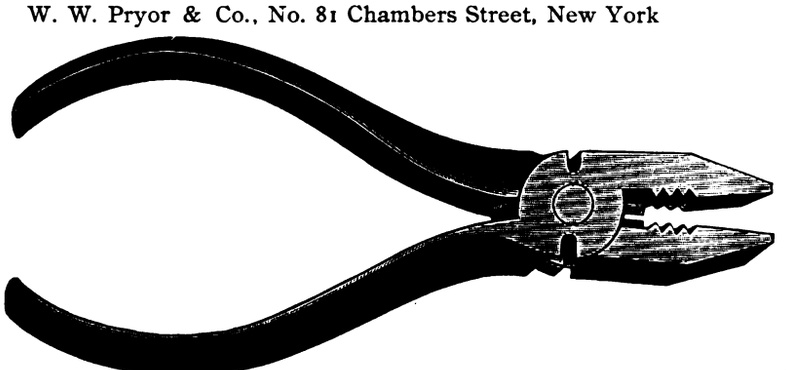


FIG. 2.

FIG. 3.

Hall's Household Plier.

W. W. Pryor & Co., No. 81 Chambers Street, New York city, are putting on the market Hall's Household Pliers, of which a cut is here given. In this implement are included a side and two joint cutters, the latter having a capacity of about 3-32, together with a burner plier and common flat nose plier. The tool is five inches long and well made, being drop forged from a good quality of steel; the cutters are tempered, and will cut hardened wire very easily. This plier is made either polished or nickeled and will be found neat, useful and lasting.

Perk's Cutter and Grater.

Schroeter Bros., No. 811 North Fourth Street, St. Louis, Mo., are offering Perk's Combination Horse-Radish Grater and Cutter, cuts of which are here given. The manufacturers state that "this grater and cutter gives the like satisfaction in grating and slicing raw and cooked potatoes horse-radish, bread, almonds, chocolate, cheese, crackers, cocoanut, etc., in fact, every article which requires grating or slicing. The knives are made out of refined steel and well tempered. The cleaning of grater and cutter is easily done in a few minutes. The grater is so constucted that it will do the work ten times quicker than any machine that has ever been on the market. It is specially recommended for grating horse-radish."

The main office of the Asbury-Paine Mfg. Co. is now located at Wayne Junction, Germantown, Philadelphia, Pa.

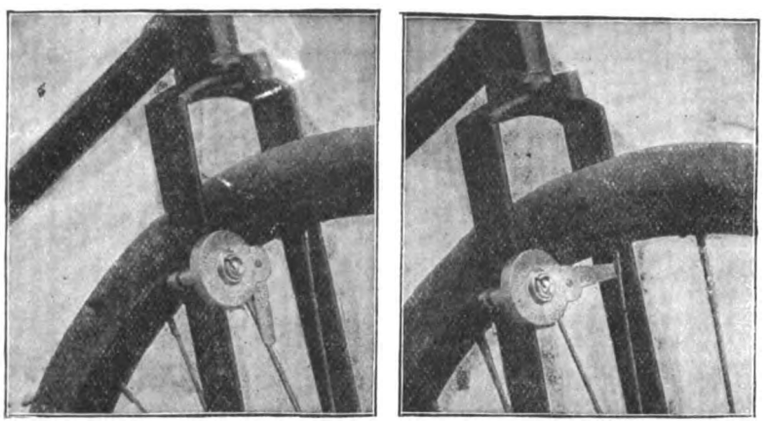
ILLUSTRATED BICYCLE NOVELTIES.

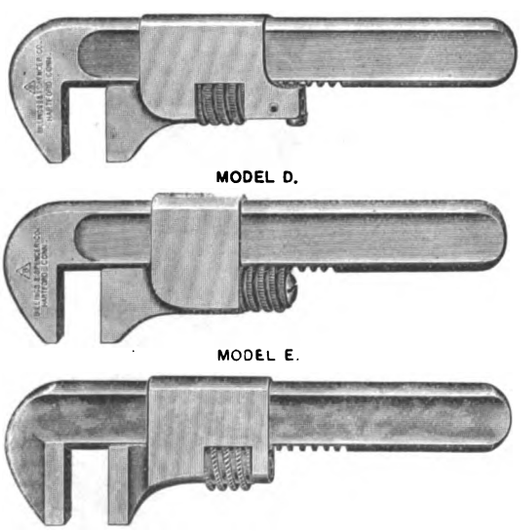


MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Perfect Bicycle Lock.



The Perfect Bicycle Lock Co., Coldwater, Mich., are manufacturing a Bicycle Lock, which is here shown. The makers state that "it is permanently fastened to the front fork of the bicycle, on either side, with an adjustable

coupler. To lock the machine, the lever is raised from a vertical to a horizontal position with the finger, no key being used. To unlock the wheel, the key is inserted and turned slightly, when the lever falls of itself and remains firmly fixed. It is strictly a first-class lock, which cannot be picked." No two keys will work in the same lock. It is easily adjusted to any wheel, and weighs only two ounces. The company also make another lock, same as the above, with lantern-holder which can be attached or detached in two minutes.

Improved Bicycle Wrenches.

The illustrations which are here given show the 1895 model of the improved patent Adjustable Pocket Wrenches,

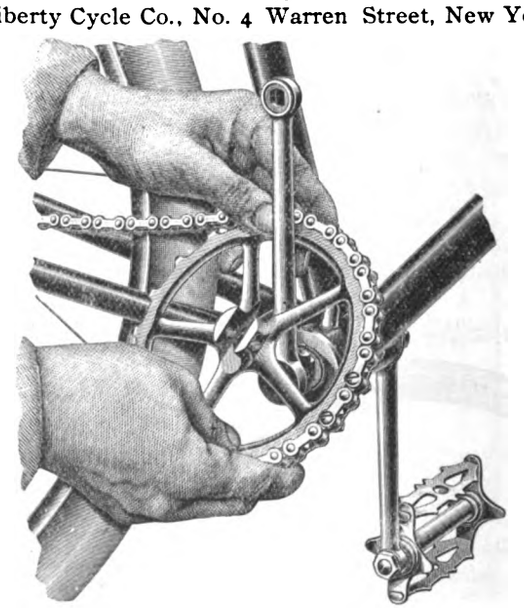
MODEL D.

MODEL E.

NEW MODEL B AND E.

manufactured by the Billings & Spencer Co., Hartford, Conn. Model D represents a quick action wrench, the sliding jaw of which can be moved by using the nut the regular way. If quick action is desired, the thumb is pressed on lever back of the nut, thus raising the nut and disengaging from the thread on bar, the jaw can then be slid along the bar in either direction. By removing the thumb from lever, the nut immediately drops down and engages with thread on the bar. Weight, 5½ ounces. Model E is a solid jaw wrench. This wrench is furnished with a forged steel or steel casting sliding jaw with drop forged steel bar and is nicely finished all over and furnished in black finish or full nickel-plated. Weight, 5½ ounces. New model B and E wrench is furnished only with steel casting sliding jaw and drop forged steel bar, mill black finish, and is referred to as "the best cheap wrench in the market." Weight, 5 ounces.

Bicycle Lock and Trousers Guard.



Bevin Bros. Mfg. Co., East Hampton, Conn., are offering

the trade a Combination Bicycle Lock and Trousers Guard, an illustration of which is here given. Two trouser guards with holes punched in each, and one small padlock, make a set. The guards are adjusted in the usual manner, the spring in them holding the trousers in position. When dismounted, the rider can detach the guards, and with the padlock fasten it around any part of the wheel, thus disposing of it in an advantageous manner.

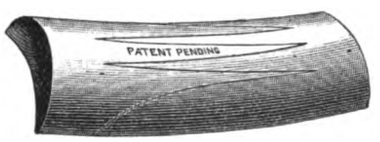
A Detachable Sprocket.

One of the features of the '95 Liberty, manufactured by the Liberty Cycle Co., No. 4 Warren Street, New York, is

the Detachable Sprocket, an illustration of which is here given. This sprocket, the manufacturers claim, "is simplicity itself. It consists of a drop forged sprocket and a binding bolt. The instant the bolt is removed—and this can be done in a few seconds—the sprocket is passed over the shaft and crank in the manner illustrated. This device has been tested for five months, and the result has been entirely favorable. If a larger sprocket is put on, the chain

Digitized by Google

is lengthened by putting in one or more detachable links, the addition being made without any filing or riveting, a wrench being the only tool necessary."



The Develine Whistle.

The whistle which is represented here with a full-sized cut, is being introduced by Dame, Stoddard & Kendall, No. 374 Washington Street, Boston. The internal parts of the whistle consist of a revolving fan-shaped wheel, similar to those used in ventilators. The tone produced is regulated by the rapidity with which the air is cut off by the revolving fan, the higher notes resulting when the whistle is blown the hardest, and the fan consequently revolves most rapidly. The whistle is described as something entirely new, and when blown the sound produced resembles a water whistle, as almost any note can be made by it. The manufacturers claim that it never fails to attract attention either as a bicycle or street-car call, and judging from the noise made by a sample sent HARDWARE, we are sure the claim is well founded.

Fairbanks Wood Rims.

The cut here given shows the joint in the one-piece rims manufactured by the Fairbanks Wood Rim Co., Boston, Mass. The makers state that "the bending process adopted for making these rims tends to compress the wood rather than stretch it. The effect is a rim exceptionally lively and resilient. The joint will be the strongest part of the rim; as the cuts all being brought to fine points result in practically no wood being cut away where it can lessen the strength of the rim; and as the glued joint is more elastic than the wood alone, breakage is almost out of the question. In fact, under severe strains in all directions the joint has withstood the test better than the other portion of any rim made from the best selected woods."

"Hop's" Corner.

Great lessons are prominently brought before the minds of many northern merchants in reviewing the successful outcome of a business like that of Beck & Gregg, of Atlanta, Ga., which, at a dinner given to their talent and which was commented upon in a recent number of HARDWARE, felt and expressed a deserving pride in the fact, that from a borrowed capital of $4000, on which they started business twenty-nine years ago, they had so frugally, economically and carefully husbanded their resources, opportunities and abilities, that to-day they can claim a business of a half million dollars annually and the possession of a paid up capital of $150,000.

The South to-day can show in just such flattering evidences as this historical record discloses, that it is in a progressive state at last. They no longer wait for the hour and the man to arrive; they sally forth and make the present the field of battle, finding the grain of successful effort well planted in every hamlet penetrated by the indefatigable traveling man.

Joe Hendrix, the Brooklyn congressman, in a recent debate upon the currency question, very pointedly advised the South "to disregard the teachings of men who knew us only as a feeble and struggling nation, and to drink in the spirit of the closing of the nineteenth century; live in its life, adjust their affairs to its edicts, and their ideas to its teachings, and make of their practically undiscovered country a part of the rest of the progressive world." And this is what Beck & Gregg pride themselves upon having done, and I commend their shining example to many of their brainy competitors who still let "I dare not wait upon I would," like the cat in the adage.

Speaking recently about the arbitrary methods of returning goods adopted by some of our largest Hardware jobbers in their relations with Eastern manufacturers, I was reminded of one instance in my own experience which amply illustrates the palpable injustice of the modern system as perfectly as possible. One of the largest Western jobbers whose travelers are in number the wonder and admiration of their conservative competitors, had as buyer for one department a gentleman who sat down one day and ordered "Ten gross rivet sets each, No. 7 and No. 8." As these were the two smallest sizes on our catalogue, being suitable for about No. 12 Rivets, it looked odd, to say the least, they should want so many of them; but it's a big house, and the possibility that they had a special use for them stifled a possible letter of enquiry.

So the goods were made up and sent to them without special comment. Well, a very short time subsequently along came a bill from the house in question for the same goods, invoiced back to us, accompanied by a bill of lading and a letter written by the said buyer, who stated he "wanted instead ten gross of rivet sets each, for No. 7 and 8 Rivets," and so he returned these to us, "as they were unsalable sizes," and if we couldn't forward what he wanted promptly, to so advise him, "that he might procure them elsewhere." Not a word said about the ordering man having made a mistake. Oh, no! not an apology of any kind. No "please permit me to return these." No! it was simply "fire them back; we don't want them." Well, as it was no fault of ours, we politely but firmly assured the house in question that these goods were made up for their especial order, were undoubtedly unsalable in New York as they were further West, and further stated that immediately upon their arrival here, we should be compelled to reship them to the house whose original order had resulted in their unnecessary existence; and we also suggested, that hereafter, when ordering similar goods, that the ordering man would save time and trouble if he would consult our own catalogue, which was our "mentor, guide and friend," instead of some other loosely constructed compendium of ironmongery, and adopt our numbers for the articles it was evident he wanted, but failed to order.

The justice of this course on our part was acknowledged; as we heard nothing further from them concerning "sets," nor did they "close their account" with us on account of our not submitting to this truly modern method of ordering goods, hit or miss.

"Hop."

Two passengers on a Western train became involved in a controversy which waxed so hot that one of them called the other a liar. "What's that, a liar?" and he was on his feet in an instant. "Yes, a liar," was the emphatic response, "or my name ain't John Smith, of Smithville." "What, the Hardware merchant?" "The same." "Mr. Smith, I am delighted to meet you. I represent Mr. Sharpedge & Co., of New York, and can show you a line of samples that will make your hair curl."—*Texas Siftings.*

Hand and Foot-Power Wheels.

D. H. Dorsett, whose reputation as an inventor is widely known in bicycle circles, has again interested all lovers of wheels by his recent invention of the Dorsett Combination Bicycles and Tricycles, manufactured by the Cyclone Combination Cycle Co., of No. 309 Broadway, New York City, with factories at Jamestown, N. Y. The new machines combine hand and foot power, used either collectively or independently, at the will of the rider. This new creation is the result of hard study and careful experiments on the part of Mr. Dorsett, extending over a period of several years, and represents an outlay of thousands of dollars. In the illustrations here given Fig 1 shows the Dorsett Bicycle, Fig 2 shows the Dorsett as an ordinary safety. Fig 3 shows the Dorsett Tricycle. The gentlemen's wheel is of graceful design of frame, the diamond pattern being used, and with the hand power applied, weighs 28 pounds. The hand mechanism, however, is instantly detachable, and the wheel becomes a regulation safety, 22 pounds in weight. Price $135.

The tricycle is a handsome machine, weighing 40 pounds, fitted with 62-inch gear, and is listed at $165. As is the case with the bicycle, it can be propelled bv either hand or foot power or by both, and the hand power is detachable. The entire line is equipped with Morgan & Wright or Hartford Single Tube Tires, unless otherwise specified, and with Garford saddles. The tricycle should prove a boon to those who cannot master the bicycle. Fifteen miles an hour has been accomplished by a lady rider on the Dorsett tricycle, The power exerted by the arms is communicated to the driving shaft by a reciprocating lever connected to the clutch mechanism. The lever is also rotatable, and at its centre of oscillation, steering rods are connected, which reach forward to the shoulders of the front wheel frame. It is therefore possible to simultaneously propel and steer by means of the lever, no matter what its position. The addition of the hand propelling device enables a rider to exert the maximum arm force when the foot cranks are at "dead centre," and hill climbing is accomplished with little effort. The speed possibilities of the Dorsett wheel have not yet been developed, though Von Boeckman, an amateur rider, cut 2 1-5 seconds off the world's record for one-third of a mile, at Buffalo, N. Y., on Friday, December 7th. In construction, scientific and practical methods have been followed, and no wheel on the market to-day shows a closer attention to details. It is double framed throughout. The

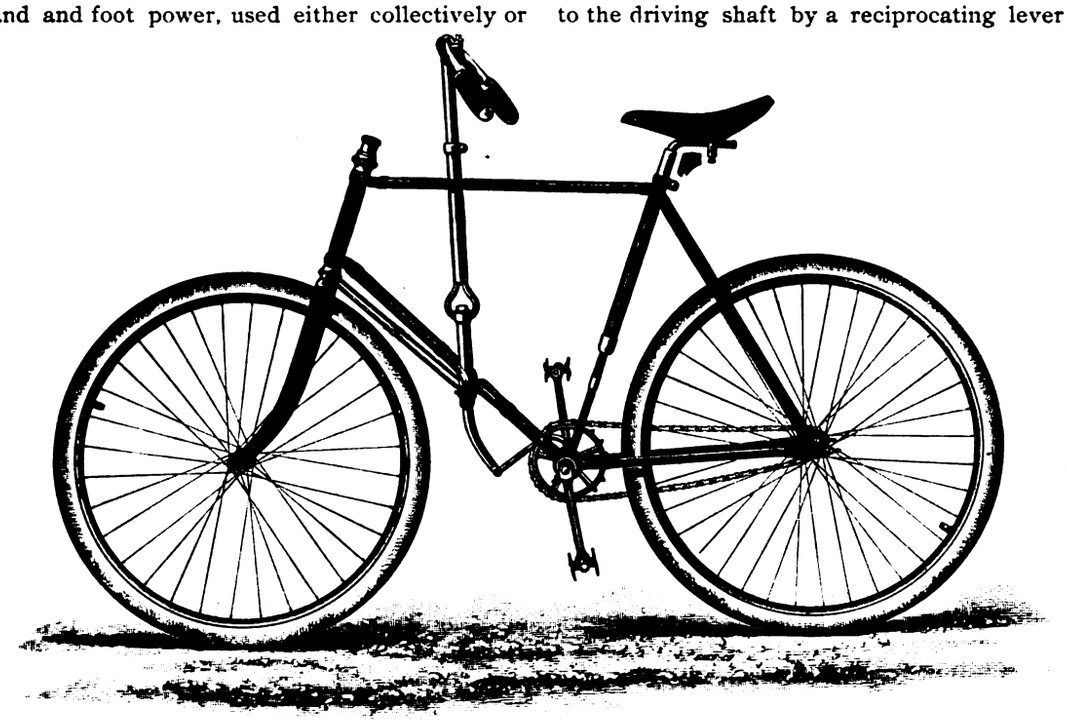

FIG. 1.—DORSETT BICYCLE

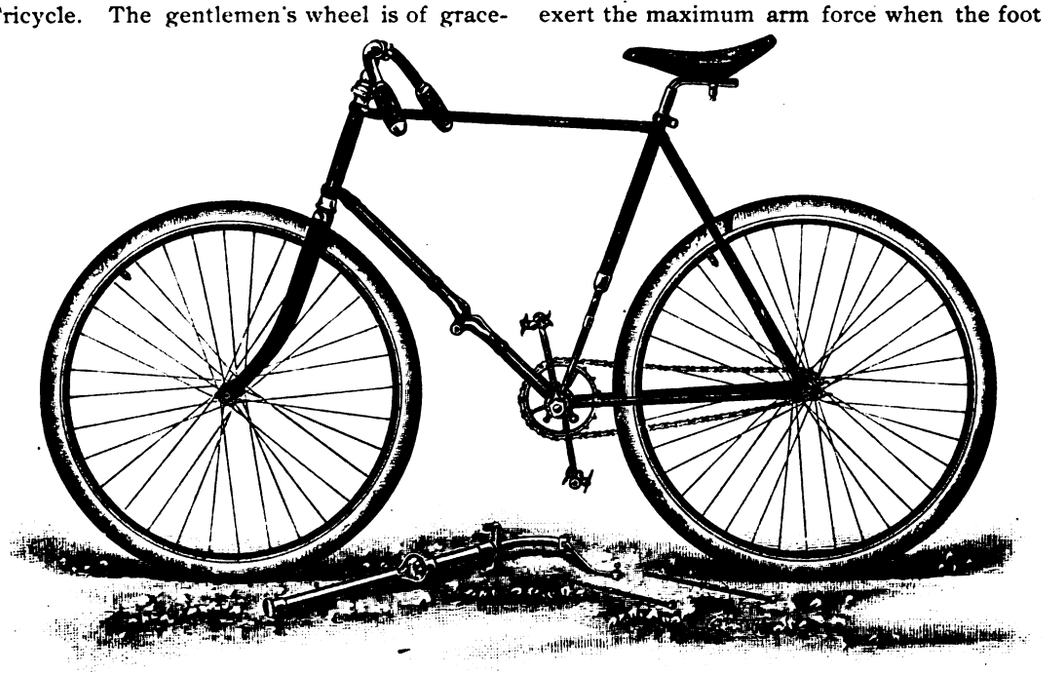

Fig 2.—DORSETT AS ORDINARY SAFETY.

Digitized by Google

wearing parts are of material universally acknowledged to be the best. The hand lever is nickeled, and the general appearance of the wheel is very favorable. The complete line of Dorsett hand and foot power bicycles and tricycles will be exhibited at the New York show, at space No. 126.

Recent Catalogues.

E. T. Fraim, the Keystone Lock Works, Lancaster, Pa., has issued a new catalogue for 1895, representing his full line of 169 different padlocks. It is well printed, bound in boards, with red cover and gilt lettering, and is a very substantial as well as handsome publication. A copious index shows the many different lines of his manufacture. On pages 68 and 69 we find illustrations and descriptions of his new automatic padlock. This is a novel and durable article, that has met with unusual success. The turn of the key to the left, and the shackle will unlock and automatically spring in position. The shackle will automatically enter the case and securely lock by simply turning the shackle back. He has also added a line of cheap brass and bronze padlocks which are shown on pages 70 to 75; also a complete line of railroad, freight car and switch locks, which appear on pages 102 to 121. In a note of introduction Mr. Fraim says: "Since our last issue, three years ago, we have added about ninety new padlocks, on some of which we kept you posted through the medium of illustrated circulars, but the large majority are now shown for the first time. We believe this catalogue includes the largest and most complete line of good, straight, honest and reliable active-selling padlocks ever produced by any single concern. The increased demand for goods of the best material, finish and workmanship, and of a higher degree of security, has made necessary constant additions to our line, until now we are prepared to furnish padlocks for nearly every purpose, from a dog collar to a railroad switch or prison. The stock of no Hardware store is now complete without some of the leading Keystone Padlocks. Having a carefully selected force of designers and modelers, we are prepared to produce any special padlock, also freight car and switch locks to suit any key furnished, and a fit guaranteed; and with the very best facilities for manufacturing, with all the latest modern tools, machinery and patterns, and employing skilled labor only, we offer you our goods as unequaled for finish and durability, and at the lowest possible prices."

The Crawford Mfg. Co., Hagerstown, Md., with branch houses at No. 72 Reade Street, New York, and No. 608 North Fourth Street, St. Louis, are sending the trade a very handsome and artistic catalogue, in description of their high grade and juvenile bicycles. This is one of the most attractive publications of this character issued from the press of 1895. It is printed in colors, upon very heavy paper, and their well-known wheels stand out with unusual distinctness, giving the student of bicycle literature an excellent opportunity of seeing just what each article is. Full page illustrations are given of their Crawford No. 19, Crawford No. 20, Crawford No. 17, Crawford No. 18, Crawford No. 11, Crawford No. 22, Crawford No. 13 and Crawford No. 14. Each one of these wheels is fully described as to size, weight, make-up, price, etc. Special illustrations are given of their frames, ball-bearings, crank hanger bracket, chain adjustment, tires, handle-bars, etc. They state that all their bicycles are finished in the best possible manner, great care being used in preparing all parts by the application of either nickel or enamel. They further add: "All our machines are supplied with the latest pattern tool bags, strapped to the frames. The tools consist of a pneumatic pump, wrench and oil can. The weight has been brought down to the lowest possible degree consistent with strength, making the Crawford the lightest medium priced line on the market." This catalogue will be sent upon application.

FIG. 3 – DORSETT TRICYCLE.

The Troy Nickel Works, manufacturers of Alaska Stove Trimmings, Troy, N, Y., have issued an 1895 catalogue and price list of the line of goods manufactured by them. This is their fourteenth annual presentation to the trade, and it is needless to say that while their old and favorite "Always Cold" specialties are presented, they also show many new articles, several of which are illustrated in another portion of this issue. Among these goods are their Perfection stove pipe, improved kitchen sets, parlor sets, fire shovels, pokers, stove lid lifters, tack hammers, bales, gasolene oven turn keys, stove knobs, drop knobs, oven door handles, and also their line of solid iron, nickel-plated stove trimmings, of which they carry a full line, and which consists of knobs, turn keys, foot rails, etc. The company promise that "the

Digitized by Google

most favorable discounts and every advantage the market affords will be given to our customers." The cover of this catalogue is a work of art, printed in blue and silver, and presenting a scene which, "Always Cold," well illustrates the character of the goods they manufacture. This catalogue will be sent upon application.

The Pope Mfg. Co., Hartford, Conn., have in their 1895 catalogue of Columbia Bicycles, surpassed by several degrees even the high record they have heretofore made in the line of artistic book-making. The catalogue which they are sending forth, contains about fifty pages, finished as finely as the great majority of the gift books which are always a feature about the holiday season. The cover is wonderfully attractive in colors, and unique in design, and scattered all through the work in full page and margin we find evidences of the work of first-class artists. It is, of course, impossible to attempt any description of the various illustrations given, a part of which are devoted to their wheels and specialties, while others are simply evidences of what illustration can do to brighten up and make interesting the text. We have views of their works and offices; cuts of their wheels, saddles, tires, pedals, etc.; marine, country and hunting views; with bits of woodland and seashore thrown in, here and there, in the most attractive and artistic manner. A description of the great works at Hartford, and a history of the Hartford Cycle Co., which belong to the Pope Mfg. Co., are also given. The work is one that needs to be seen to be appreciated, and we assure any dealer that it will be worth his while to send for a copy thereof.

The Chamberlin Cartridge & Target Co., Cleveland, Ohio, have issued a very attractive catalogue of their Blue Rock targets and traps and Chamberlin cartridges. This is illustrated with fine engravings in half-tone, printed in red upon fine white paper, and contains a great deal of information of an interesting character. Within it is found the programme of the Second Annual Tournament, which is to be held on June 19, 20 and 21, 1895. Among the articles to be displayed are their Expert Trap, the Old Reliable Blue Rock Pigeon, their Extension Spring Trap, compression spring trap, a model trap house, etc. In a note of introduction they say "that all their traps, targets and pulls and devices and machinery of their manufacture are fully protected by patents." Elsewhere will be found an illustration and description of one of their specialties. This catalogue will be found very useful to any one interested in goods in this line, and the company will be pleased to send it upon application,

"Stick and Stay" is the title of another of these little leaflets issued by the New York Belting & Packing Co., New York. This illustrates and describes their rubber cycle sundries, among which are their rubber cement for patching purposes, tire tape, liquid tire cement for wood or metal rims, double diamond repair outfit, pure patching rubber, etc. In a note the company say: "There is an increasing demand for a complete line of Rubber Cycle Sundries which few have the facilities to supply. A long experience in manufacturing rubber goods, and a special study of the requirements of the cyclists, enable us to offer, in our 'Stick and Stay' sundries, exactly what is wanted. Great care has been used in preparing these sundries, and they are of excellent quality."

Wells Bros. & Co., Greenfield, Mass., have issued an illustrated catalogue of 120 pages, which contains a full illustration and description of their well-known line of labor-saving tools and machines. The company say: "Large additions have been made during the year, and we feel that we are keeping up with the times. New goods, new prices, new discounts, are the order of the day. We are anxious that every dealer in, and user of, this class of tools shall be supplied with a copy, which we will send free of charge upon application." It is, of course, impossible to even commence an enumeration of their immense line of goods, many of which have been shown from time to time in the columns of HARDWARE.

The Waterbury-Farrel Foundry & Machine Co., Waterbury, Conn., have issued a finely illustrated price list, showing their Drop-Presses and Foot-Presses. The large variety of machines manufactured by them follow each other upon successive pages, with descriptions, dimensions, prices, etc. On the last page is a useful tool room machine, to which attention is especially called. The catalogue is accompanied by a leaflet, especially illustrating their hydraulic embossing press, and containing a view of their works. Those who use power presses, rolls, etc., will receive a copy of this publication upon application.

The Eagle Bicycle Mfg. Co., Torrington, Conn., have issued a very handsome and artistic catalogue, printed in colors and upon very heavy calendered paper, and showing their well-known line of goods in a very artistic manner. It contains a picture of their works in Torrington, and illustrated descriptions of their well-known wheels. They say: "Our lines of new models herein described show many marked improvements. They embody many distinguishing features, which are found only in bicycles of our make."

The Jos. Dixon Crucible Co., Jersey City, N. J., have issued a third revised edition for 1895 of their handsome and useful little hand-book, "Graphite as a Lubricant; Practically and Scientifically considered; also its value as an accessory for engineers and machinists." There is a great deal of information of a valuable character for those who have use for an article of this kind.

The catalogue of the Syracuse Cycle Mfg. Co., Syracuse, N. Y., for 1895, is a most complete and comprehensive one. It shows a full line of cuts of the latest bicycles and improved accessories, and contains information of value to riders, such as road records, etc. A useful price list of parts of wheels is appended.

The Wire Goods Co., Worcester, Mass., are sending their friends a leaflet illustrating and describing their all-steel school-house and gymnasium hooks. These are warranted to sustain three hundred pounds weight. They also show their Czar harness hooks, Czar fire-pail hooks, and coat and pantaloon hangers.

Hulbert Bros. & Co., No. 26 West Twenty-third Street, New York, have issued a catalogue of their "Majestic" line of wheels for 1895. This shows their Light Roadster No. 6, their No. 7, their No, 8, with the parts thereof, giving detailed description, prices, testimonials, etc,

"How to get a New Tire for an Old One," is the title of a little monograph just received from the Gormully & Jeffery Mfg. Co., Chicago.

The Gormully & Jeffery Mfg. Co., Chicago, have issued a very attractive catalogue illustrating and describing their Rambler bicycles.

Allerton Lubricant Co.

The Allerton Lubricant Co., Chicago, Ill., have incorporated with $3,000,000 capital. The lubricant manufactured by the new company is made from waste mica, which is a natural lubricant. It is used on railways to lubricate car journals, electric motors and other bearings, to overcome friction resulting from heavy pressure or great velocity. The manufacturers state that their lubricant will not gum or melt in hot weather, nor freeze in cold, and will lubricate the entire face of the axle. It is put up in barrels, half barrels, kegs, 25-pound wood pails and tins of 15, 10, 5, 3 and 1 pound. The Allerton-Clarke Co., No. 23 Lake street, Chicago, and No. 83 Reade street, New York, are the selling agents.

The Chicago Cycle Show.

A GREAT EVENT FOR WHEEL MAKERS, SELLERS AND RIDERS. THE EXHIBITION AN ESTABLISHED ANNUAL EVENT.—LARGE ATTENDANCE AND BENEFICIAL EFFECTS.—LIST OF EXHIBITORS, ETC.

The first Annual Exhibition of the National Cycle Exhibition Co., of Chicago, is a thing of the past. For one entire week, from January 7th to 12th inclusive, the Cycle Crank has ruled supreme. From the standpoint of attendance, the show was an assured success the first day, and the managers now state that financially it has also been a winner. The impetus given to the cycle trade through the medium of this exhibition cannot be overestimated, and the fact that exhibitors have already filed applications for space for next year, ensures the future of the undertaking, and now the annual exhibition may be called a fixture. That an enterprise of this nature should be a financial success the first year, shows what a hold cycling has taken upon the public, and the enormous capital invested in the manufacture of wheels was clearly demonstrated to the attendants at the show. When the general public came to a full realization of the fact that over $25,000,000 of capital was represented by the various exhibitors, they awoke to the fact that cycling was no longer a fad confined to the few, but a permanent institution, endorsed by the masses. The attendance the opening night was over 1800, and each succeeding day bore testimony to a steady ratio of increase.

The exhibitions at the various booths were both artistic and unique, attracting the attention and pleasing the eye, while instructing the visitor upon the merits of the various wheels and contrivances. The idea that only people who ride wheels attend a cycle show, is now an exploded theory, as evidenced by the mixed crowds who daily thronged the armories of the Second Regiment. Nearly every class of citizens was represented, and nearly every branch of industry. Fully fifty per cent. of those present never in their lives bestrode a wheel or know the difference between a "single" and a "tandem."

The floor space devoted to exhibits is considerably larger than Madison Square Garden, and every available foot was occupied. Long before the opening day applicants for space were being turned away, and although the representation was large, many who desired space were forced to abandon the idea. This was the only feature that marred an otherwise perfect exhibit.

There was besides the sightseer and enthusiast, another regular attendant at the daily session. This was the out-of-town dealer who took advantage of the opportunity afforded him of comparing the different wheels, and becoming acquainted with the claims of the various manufacturers. Over 2000 regular trades registered during the week, and bought largely of the different exhibitors. One buyer stated that he had been waiting for six weeks before placing his order for a thousand wheels.

There is no doubt but that interest in bicycles and bicycle affairs is greater than ever before and it is hardly traceable to the exhibition. The daily papers here contributed over thirty-five columns of space to the exhibit, and the periodicals outside of the cycling papers fully as much more. Manufacturers and jobbers alike report a strong increase in orders, and while there is no doubt that a portion of this represents an anticipation of orders that would have been placed in the spring, still there is a large margin left which would never have been heard from without the medium of the exhibition.

There were the usual number of new things shown, and improvements and so-called improvements were to be seen in nearly every booth, but the most notable features were the reduction in weight and price.

It is safe to say that, barring tandems, there was not a machine shown weighing over 30 pounds, while the light roadsters exhibited would not average over 22 pounds. The lightest wheel was shown by Munger. It weighed 8¼ pounds, whilst the Black Mfg. Co. came next with a wheel weighing 8 pounds, 14 ounces.

The reduction in prices referred to was general. First-class machines averaged about an even hundred dollars. Now and then a manufacturer catering for the elite trade showed $110 to $115 signs, but they were decidedly in the minority.

A regular musical programme was presented each day, by Brooks' Second Regiment Band, and was most thoroughly appreciated. Several attractions were presented, but probably the one receiving the most attention was the "Living Pictures," giving a faithful portrayal of cycling and cycling costumes, together with actual and fanciful pictures, both artistic and humorous.

THE EXHIBITORS.

Stands 1 and 2 were occupied by the Columbus Cycle Co. with a full line. Stand 3—The Fulton Machine Works, regular line, including a twenty-five pound single chained tandem. Stand 4—The Grand Rapids Cycle Co., with an exhibit of light roadsters and racers. Stand 5—James Cycle Importing Co. Stands 6, 7 and 8—A. G. Spalding & Bros., with a full line of their goods, including a novelty in a folding bicycle, built for military purposes and capable of being folded up into a space of three feet. Stands 9 and 10—The National Cycle Mfg. Co., with a full line. Stands 11, 12 and 13—Western Wheel Works. Stands 14 and 14½—The Buffalo Cycle Co. Stands 15 and 16—Kingman & Co. and the Warman-Schub Cycle house. Stand 17—Keating Wheel Co., with a fine exhibit of light wheels. Stand 17½—Fenton Metallic Mfg. Co. Stand 18—Ames & Frost Co. Stand 19—Eclipse Bicycle Co. Stand 20—Julius Andrae Sons & Co., light roadsters and racers showing a novelty in the shape of a cork covered raising handle bar. Stand 21—Relay Mfg. Co. Stand 22—Waltham Mfg. Co. Stand 23—E. B. Preston & Co., light tandems and roadsters. Stand 24—Ariel Cycle Co., full line. Stand 25—Two-Speed Bicycle Co., complete line. Stand 27—The Black Mfg. Co., a full line, including a racer weighing 8 pounds, 14 ounces. Stand 28—Hibbard, Spencer, Bartlett & Co., with a full line of Ajax wheels. Stand 28½—McKee & Harrington. Stand 29—March-Davis Co. Stands 30 and 31—Marion Cycle Co., full line, novelty in the shape of a saddle placed at the apex of a triangular frame. Stands 32, 33 and 34—H. A. Lozier & Co. Stands 35 and 36—St. Louis Refrigerator & Wooden Gutter Co., light roadsters and racers. Stand 37—Geo. N. Pierce & Co., a full line and a novelty in shape of a gold-plated racer. Stand 38—Rochester Mfg. Co. Stands 39 and 40—Rouse, Hazard & Co., a full line and a curiosity in the first chain driven safety made. Stands 41 and 56—F. F. Ide Mfg. Co. Stands 41½ and 55½—Central Cycle Mfg. Co. Stands 42, 43, 44, 95 and 105—Gormully & Jeffrey; large exhibit of cycles and cycle tires for vehicles, also several novelties. Stands 45, 45½ and 46—Overman Wheel Co., with full line of Victor wheels. Stands 47 and 48—Yost Mfg. Co., Japanese pagoda full of their wheels. Stand 49—Derby Cycle Co. Stands 50 and 51—A. Featherstone Co., full line of roadsters. Stands 52 and 53—Eagle Bicycle Mfg. Co., full line, including their aluminum rims on nearly every wheel. Stand 51½—Plymouth Cycle Mfg. Co. Stands 54 and 55—A. F. Shapleigh Co. Stands 57, 58 and 59—E. C Stearns & Co., a complete line, including the quad, triplet and tandem used in pacing Johnson when smashing records. Stands 60, 61 and 62—Pope Mfg. Co., with a full line of Columbias, and a historical collection of hubs and wheels. Stand 62A—National Sewing Machine Co. Stand 62½—Warwick Cycle Co, Stand 63—Kenwood Bicycle Mfg. Co. Stand 64—Stover Mfg. Co. Stands 65 and 66—Syracuse Cycle Co. Stand 67—W. H. Wilhelm & Co., single wheels and tandems, full line. Stands 67A and 77A—Remington Arms Co. Stands 67½ and 77½—The Peerless Mfg. Co.,

Digitized by Google

full line and exhibit showing process of construction. Stands 68 and 77—Indiana Bicycle Co. Stands 69, 70, 75 and 76—Monarch Cycle Co., full line of Monarch wheels, also a wheel finished in hemlock bark, giving the appearance of a wooden wheel. Stands 71 and 74—Hill Cycle Mfg. Co. Stands 72 and 73—Union Cycle Co., full line and the $1000 slab of gold presented by Morgan & Wright for fastest unpaced mile on their tires. Stand 78—Munger Cycle Mfg. Co., full line, including the lightest machine, show an eight pound wheel perfect in every point. Stands 79 and 80—Sterling Cycle Works. Stand 130—Queen City Cycle Co. Stands 133 and 134—Motor Cycle Co. Stand 136—Hoffman Cycle Co. Stands 137 and 138—Cortland Wagon Co. Stand 139—Hay & Willits, with a new wheel called "Outing." Stand 140—Mason & Mason and the International Mfg. Co. Stand 141—The Speeder Cycle Co. Stand 142—H. F. Schleuter Cycle Co. Stand 143—Lovell Arms Co. Stand 144—Thorsen & Cassady. Stand 145—Brooklyn Cycle Co.

The balance of the exhibit was taken up by displays made by the various houses who manufacture and handle bicycle sundries. They were: The Niagara Cycle Fittings Co., of Buffalo, N. Y.; the Simonds Rolling Machine Co., of Fitchburg, Mass.; the Reed & Curtis Machine Screw Co., Worcester, Mass.; the Spaulding Machine Screw Co., of Buffalo, N. Y.; Cullman Wheel Co., Chicago; C. J. Whipple & Co., Waterloo, Iowa; Arlington U. Betts & Co., Toledo, Ohio; Rockford Tool & Sundry Mfg. Co.; Whayne Mfg. Mfg. Co., Louisville; W. S. Frazier & Co., Capital Mfg. Co., Kalamazoo Cycle Co., Braddock Hose Supporter Co., the Elastic Tip & Tire Co., New Departure Bell Co., Bristol, Conn.; G. W. Cole & Co., Cushman & Denison; Indiana Novelty Mfg. Co., of Plymouth, Ind.; M. E. Griswold & Co., Roger B. McMullen & Co., the Hunt Mfg. Co., Indianapolis Rubber Co.; the Tillinghast Tire Co., of Providence, R. I.; New York Standard Watch Co., Eastern Rubber Mfg. Co.; the Tie Co., Unadilla, N. Y.; Boston Woven Hose & Rubber Co.; Parkhurst & Wilkinson, Chicago; Columbia Rubber Works, Diamond Rubber Co., Mechanical Rubber Co., L. C. Smith Tire Co., New York Tire Co., New York Belting & Packing Co., United States Tire Co., American Dunlop Tire Co., Morgan & Wright; E. J. Lobdell, Marietta, Ohio; Joseph Caldwell & Co., Chicago; Bridgeport Gun & Implement Co., Seig & Walpole Mfg. Co., Lodge & Davis Machine Tool Co., Garvin Machine Co., Fauber & Norton, J. J. Boucher & Co., T. J. Lindsay & Co., C. A. Taylor Trunk Works, Cycle Tent Co., Chicago Cycle Coupler Co., Noderer Mfg. Co., J. C. Van Vleet, Hall Shone & Co. MACK.

Chicago, January 16, 1895.

A. B. Harrison, of Harrison & Wolfe, No. 54 Broadway, New York, has gone to Mexico to represent a number of prominent American manufacturers. He took a large quantity of samples and will stay until he is able to establish a business. Among the concerns represented by him, all on a strictly salary basis, are the Reading Hardware Co., Kearney & Foot Co., Atha Tool Co., Iron City Tool Works, C. E. Jennings & Co., Peck, Stow & Wilcox Co., Benj. Atha & Ilingsworth Co., Meriden Britannia Co., Revere Rubber Co., Scovill Mfg Co., Scovill & Adams and Syracuse Chilled Plow Co. His main business is to bring the merchandise of the concerns represented to the attention of the large trade of that country. Mr. Harrison was export manager for Sargent & Co. for nearly ten years.

The desk calendar and holder issued and distributed by the Arcade Mfg. Co., Freeport, Ill., is certainly a prize winner. The lines of goods manufactured by the company, such as spring hinges, stovepipe registers, calendar holders, coffee mills, lid lifters, cork extractors, etc., are illustrated.

The New Britain Hardware Works, New Britain, Conn., are running thirteen hours a day.

New York Bicycle Show.

FIRST NATIONAL EXHIBIT OF CYCLES, CYCLE ACCESSORIES AND SUNDRIES.

UNDER THE AUSPICES OF THE NATIONAL BOARD OF TRADE OF CYCLE MANUFACTURERS—WHO ARE THERE AND WHAT THEY ARE SHOWING—A WONDERFUL EXHIBIT OF A GREAT INDUSTRY.

The First National Cycle Exhibit, at Madison Square Garden, was ushered in amid a blaze of electric light on Saturday evening, January 19th.

To the eyes of an ordinary mortal the Garden was a sight that would be hard to equal. The whole roof, the galleries, boxes and pillars were draped with white and delicate pink, while the Star Spangled Banner was seen everywhere. Add to this the innumerable lights that flashed and sparkled like stars in a cloudless sky, and the numerous palms and flowers and the unique decorations of the different booths, and one has a faint idea of the brilliancy of the spectacle.

Loyal New Yorkers have a just reason to feel proud, for, as in other things, this Show is the greatest of its kind. It certainly is the finest ever seen in this country, and it is hard to imagine one in another country that could surpass it. The fair sex showed their interest in the silent steed by attending in large numbers. The D'Aquin orchestra discoursed sweet, familiar airs, and the Powers family, Kilpatrick, the one-legged wonder, the Martell family and W. S. Maltby performed tricks that astonished the multitude. The bicycle fashioned largely from electric lights, that formed part of the sign which announced the character of the show, though in point of size the largest, was undoubtedly the lightest machine in the building. About 165 booths filled the immense floor, and the array of bicycles and accessories was bewildering to the eye. Not only were there bicycles "built for two," but for three and four. The latest and best in the bike line, the products of this vast country and from across the pond, were displayed in profusion, and novelties were as thick as nails in a keg.

The detailed description of the individual exhibits which follows will enable readers to learn the quantity and quality of the articles exhibited. The officers and promoters of the Show deserve a vast amount of credit for the laudable zeal they have thrown into their work.

Of course the first things that invite detailed inspection are the booths, filled with their various forms of American mechanical genius in visible form. The following is a brief summary of what is there seen:

LOVELL ARMS CO.

The John P. Lovell Arms Co., Boston, Mass., exhibit seven wheels; five styles of the Lovell Diamond as follows: Track racer, model 22, 25-inch frame, 17½ pounds, 5-inch tread, 72-inch gear, $100; semi-racer, model 23, 25-inch frame, 5½-inch tread, 19½ pounds, 72-inch gear, $100; light roadster, model 24, 21½ pounds, 5½-inch tread, 68-inch gear, 23-inch frame, $100; full roadster, model 25, 24¼ pounds, 5½-inch tread, 23-inch frame, 64-inch gear, $100; the ladies', model 26, 24 pounds, 5½-inch tread, 23-inch frame, 64-inch gear, $100. As attractions they show a full nickeled racing wheel, and a beautiful, bright, copper finished ladies' wheel, weighing 20 pounds. A great many improvements have been made in this line. The crank shaft is higher, and the top frame tube has been raised from ¾ to ⅞ inches, and the back from ½ to ⅝ inches. One unique feature is their improved skeleton pedal, without either a screw or nut; one side of the pedal may be covered with rubber, thus making a combination rat trap and rubber pedal. These are sold separately at $5. They also have an improved detachable sprocket wheel, the wheel being narrow and of a different style from that of last year; the handle bars have an improved comfortable curve. But the novelty par excellence is a new wire spring saddle, which consists of a single saddle spring of triangular form

Digitized by Google

upon which is stretched fine piano wire, no leather being used. The saddle feels very comfortable to the hand, and every one is at once struck with the novelty of the idea. Ladies' frame is now of the double direct tube pattern instead of the ordinary loop of last year's model; on all wheels, except the racing wheels, brakes and mud guards are now fitted which may be simply and quickly detached, after which there are no marks on the wheel showing that the guards or brake had been fitted to it. They are as easily attached as detached.

INDIANA BICYCLE CO.

The Indiana Bicycle Co., Indianapolis, Ind., exhibit a full line of 1895 models of the Waverley. They are shown as follows: One high frame scorcher, 22 pounds, fitted with G. & J. wood rim clincher tires and Waverley rat trap pedals, one regular 23-inch frame Waverley scorcher, fitted with steel rims and Waverley clincher tires, made under G. & J. patents; one Waverley Belle, 22 pounds, fitted with G. & J. wood rim clincher tires, and the new pattern ladies' black top saddle and black tool bag; one 26-inch special diamond, built for ladies' use, weighing 20 pounds, fitted with G. & J. wood rim clincher tires and ladies' saddle; also raised handle bar. The list price of the two ladies' machines is $75 each, and the two gentlemen's $85 each. The exhibit comprises in addition to these, which comprises the regular catalogue line except the variation of tires and weights, a ten-pound racer, especially built for the show, and a full line of the four new Waverley pedals. There is no denying that the '95 Waverley is a wonderfully improved wheel, and that it will compare favorably with almost any on the market. Its makers have made a praiseworthy endeavor to bring about this result, to such an extent, indeed, that they are now analyzing each ingot of every lot of steel purchased, of course reducing it to fluid by a chemical process.

PRESIDENT ALBERT A. POPE.

NEW YORK BELTING & PACKING CO.

The New York Belting & Packing Co., New York, show the League and Whippet Improved Tires. The League is in three types—3, 1½ and 1¾ pounds, from $10 to $10.50; road racer, 1½ pounds, $11 track racer, 1⅜ pounds, $11. The feature of the League Tire is that the life of the rubber is preserved by cementing it on the fabric before fabric is vulcanized. It is a very elastic tire. The Whippet is the same as last year, but somewhat improved. The valves have the universal connection. There is no mold mark or fin on the tread.

CURTIS-CHILD MFG. CO.

The Curtis-Child Mfg. Co., Philadelphia, Pa., occupy space No. 48 with an attractive and handsome display of their line of Solid Comfort Saddles. These consist of twelve styles, finished in colored leather. The line consists of Racing, Scorcher, Semi-roadster, Ladies', Roadsters and Fat Men's Saddles, weighing from twelve ounces to thirty ounces, according to class. It is needless to say that their saddles attracted a great deal of attention. It may be added that all patterns can be furnished in either black or tan-colored leathers; special colors at small extra cost. Each part of the "Solid Comfort" Saddle is guaranteed in every possible respect, and the makers say "it is a pleasure to make good, without charge, any broken part or parts returned to our factory. This guarantee is broad, but we mean every word of it."

KEATING WHEEL CO.

The Keating Wheel Co., Holyoke, Mass., show their full line of wheels, which includes eight new models of the '95 wheels as follows: The Keating roadster, model K, and the roadster, model L, each weighing 19 pounds, the latter being the same as the former except a higher frame, and lists at $100. The special racer weighs 17 pounds and lists at $125. The Keating Rational is a diamond frame ladies' machine, weighing 19 pounds and listing at $100. Model 10 is a 23-pound double frame ladies' wheel. Model 11, another ladies' machine, lists at $100 and weighs from 20 to 23 pounds. It is built on straight lines and is guaranteed to carry any weight.

GRAND RAPIDS CYCLE CO.

The Grand Rapids Cycle Co., Grand Rapids, Mich., occupy space No. 29 and exhibit six machines. A racer, weighing 15 pounds; Light Roadster, weighing 25 pounds; Model No. 24, weighing 24 pounds; Lady's Model B., 26½ pounds; also a medium grade wheel for the public trade and one other nickel wheel not mentioned above. The frames of the entire line are of good sized tubing and all with 28-inch wheels. They also show a new pedal bar of their own manufacture. J. Elmer Pratt, assisted by F. A. Marshall, their New York traveller, has charge of the exhibit.

THE HELICAL PREMIER EXHIBIT.

One of the first displays which greets the visitor to the show on entering is that of the Premier Cycle Mfg. Co., at stand No. 68. This consists of five 1895 models as follows: Helical Premier Racer, 26-inch wheels, geared to 68 or 72, weight all on 17 pounds. This is the company's regular stock Racer, and, like the balance of the exhibit, is not built for "show" purposes. It is a beautiful track mount with an exceedingly rigid frame—a peculiarity of Helical Tubing. Price $100. Helical Premier Roadster, 28-inch wheels, geared to 64, 68 or 72, weight all on 20 pounds. This ma-

Digitized by Google

chine, like the Racer, is of the most modern type, and is listed at $100. Ladies' Helical Premier, 26-inch wheels, geared to 64 or 68, double-straight drop frame of Helical Tube, chain and wheel guards, brake and foot rests, weight complete 22 pounds. President L. H. Johnson claims that this is the stiffest featherweight ladies' machine in the show and invites comparative tests. Price $100. For specially heavy riders the company furnish a slightly heavier type of the Men's Roadster, fitted with foot rests, brake and guards, and weighing about 24 pounds. An all-nickeled Helical Premier, ridden by Mr. Johnson during 1893, is also shown. This wheel is fitted with two-inch tires, which the company strongly recommend for rough roads and heavy riders. It is also fitted with the Johnson Adjustable Handle Bar, which can be raised or lowered while riding and without a wrench. This is one of the neatest adjustable handle bars we have seen, and attracts a great deal of attention. The Premier line for 1895 is American-made throughout and fully in keeping with the remarkable advance in the art of cycle building in this country of late years. The exhibit is in charge of President L. H. Johnson, Treasurer H. C. Douglas and Secretary W. P. Case. New England dealers find their old friend "Teddy" Dayton on hand to explain the advantages of Helical Tubing.

A. M. SCHEFFEY & CO.

A. M. Scheffey & Co., No. 92 Reade Street, New York, at space 108, exhibit their full line of Wynnewood Bicycles, comprising eight patterns in all. This line is thoroughly popular in prices, and "Wynnewood" M (the best machine), with Wood Rims and M. & W. tires, lists at $80, and with its companion for ladies ("Wynnewood" L), at same price, make a pair of machines very hard to beat. "High grade steel tubing and best drop forgings are used throughout. The bearings are tool steel and hardened in the best possible manner, being absolutely dust proof without the use of felt washers. The crank bearing is an improvement over anything yet offered. High barrel pattern with the ball case screwed into same, and held in place by clamp screws, admits of a perfect adjustment. Cranks are of the best steel drop forgings, the right one being a new pattern with flange, to which is fastened the sprocket by four small bolts. This enables the rider to change gear when removing crank or pedal. "Wynnewood" B for men, and "Wynnewood" C for ladies, with Wood Rims and M. & W. Tires, lists at $60, and are a wonderful pair of machines for the money. This is the third year for "Wynnewood" B. It weighs, with road tires, 28 pounds, and is built strictly for business. "Wynnewood" C is a fit companion. It is much lighter and handsomer than the '94 pattern, but retains its great strength and rigidity. "Wynnewood" D and E follow for boys and girls respectively, and lists with wood or steel rim and M. & W. Tires at $50. The boy who rides a "Wynnewood" D has reason to feel proud of his mount, while the young lady or miss on a "Wynnewood" E is justified in feeling that her mount is all right in every way. The younger boys and girls are cared for in the machines called "Wynnewood" F and O, which list at $40 each. This completes the line. A. M. Scheffey, the head of the firm, who makes these machines, has been connected with the bicycle trade for eleven years. His long experience, therefore, and successful bicycle career, justify the position in the business world this house now occupies; and from the interest taken in the line of machines as presented this year, there can be no reason to doubt that the year's business will be eminently satisfactory. Complete catalogues, describing the machines in detail, are furnished on application.

SECRETARY A. KENNEDY-CHILD.

O. J. FAXON & CO.

O. J. Faxon & Co., Boston, exhibit as follows: Five Models, ranging from 21 pounds to 25 pounds. Their Model G or regular full roadster for all-round road use and touring, weighs 25 pounds; Model L, or ladies' wheel, for the same uses, weighing 25 pounds; Model H, or semi-racer, weighing 21 pounds, high frame, &c., for road racing and general road use by experienced riders; Model J, or two-speed wheel, is a special feature of their 1895 line. In this wheel the gear can be changed by the touching of a lever while riding, dropping the gear from 68 or 72 to 52 or 56 as the rider may wish. It greatly facilitates hill climbing and riding against head winds. This device adds but little over a pound to the weight, and is extremely simple. They also have a tandem weighing 40 pounds, a very powerful and fast machine.

CRAWFORD MFG. CO.

At stands Nos. 78 and 79, the Crawford Mfg. Co., with factory and main office at Hagerstown, Md., and branch houses in New York and St. Louis, exhibit a line of eight bicycles, as follows: Crawford Nos. 19 and 20, Diamond and Drop frame, respectively; list, $75. Crawford Nos. 17 and 18, Diamond and Drop frame, respectively; list, $60. Crawford Nos. 11 and 22, Diamond and Drop frame, respectively; list, $50. Crawford Nos. 13 and 14, Diamond and Drop frame, respectively; list, $40.

WILLIAM READ & SONS.

William Read & Sons, No. 107 Washington Street, Boston, show their New Mail for 1895, which has been greatly improved, is of lighter weight, but detachable sprocket, adjustable handle bar, and a wheel fully up to date. They also have a full line of the Featherstone wheels, whose output they control in part, which they believe to be one of the best in the market, as they are all drop forgings.

POPE MFG. CO.

The Pope Mfg. Co., Hartford, Conn., maintain their name for excellence in the exhibit they make. Their display consists of thirteen wheels tastefully arranged so as to afford a close inspection by all the visitors. Of the thirteen wheels, seven Columbias are shown and six Hartfords. The Columbias consist of three Models 40, high, low and medium

Digitized by Google

frames, weighing 21½ pounds; two styles of Model 41, one fully equipped, and the other without dress guards, weighing 21½ pounds; Model 42, a ladies' diamond frame, weighing 19½ pounds; Model 43, a tandem, weighing 38 pounds, and listed at $150; Model 44, the racer, weighing 17½ pounds, and listed at $100. The Hartford line exhibited, are patterns No. 1, regular road wheel, weighing 24 pounds, and

FIRST VICE-PRESIDENT A. G. SPALDING

listed at $80; pattern No. 2, Hartford ladies', weighing 24 pounds, and listed at $80; pattern No. 3, regular road wheel, weighing 27 pounds, and listed at $60; pattern No. 4, ladies' road wheel, weighing 27 pounds, listed at $60; pattern No. 5, boys' wheel, weighing 25 pounds, listed at $50; pattern No. 6, girls' wheel, weighing 25 pounds, listed at $50. The Columbia line shows the most radical changes and improvements over their last year's wheel, as they have entirely done away with the double tube frame. Among other features are the five and one-half inch tread, barrel hub, and a large crank-shaped bracket, which is fitted with three-eighths-inch balls. The wheels are all fitted with the Hartford single tube tires and Columbia saddles.

MONARCH CYCLE MFG. CO.

The Monarch Cycle Mfg. Co., New York and Chicago: The display made by this company is one of the finest. A large golden lion stands guard at the entrance. Fourteen wheels, representing five models, are exhibited; weights, 18 to 26 pounds; prices, $85, $100 and $125. The Monarch's 1895 line embodies no radically new features. The standard gear is 63 on the heavier, and 68 inches on the lighter wheels. Option of M. & W., Dunlop, G. & J. and New York tires is afforded. One of the "sells" of the show is exhibited by the Monarch Company—a wheel which is apparently of wood in its natural state, bark and all. Nearly every one has seized upon it as something decidedly novel, and unless otherwise informed, is left with the impression that something new in wooden wheels had been devised. As a matter of fact, the frame is of steel and the rims of wood. By some clever process and composition they have been given their appearance of rustic wood.

YOST MFG. CO.

The Yost Mfg. Co., Toledo, Ohio, have an attractive display. The booth is tastefully decorated. The productions shown by this company attain the general standard of excellency conceded to the Yost Co. The exhibit consists of five models of Falcon cycles: Light Roadster 4, 21 pounds, $100; Roadster 3, 24½ to 27 pounds, $85; Falconess (ladies' cycle), 27 pounds, $100; Falcon 5, 26-inch wheels, 21½ to 24 pounds, $65; Falconess 7 (ladies' cycle), 26-inch wheels, 25-pounds, $70; No. 4½, Racer, 17 pounds, $125. Society wheels with gold cranks are also shown.

REMINGTON ARMS CO.

The Remington Arms Co., New York, make an excellent display. The productions of this company are too well known to need a lengthy description. Three models are included in the Remington exhibit. The Road Racer weighs 23 pounds, and is their standard wheel, made upon the well-known standard Remington lines, with a 4 9-16-inch tread, 28-inch wheels, Palmer tires, Sager saddle, Perry chain, detachable sprocket and Remington pedals. This and the Ladies' Remington list $100. This latter is a double-truss frame, with the upper tube so curved as to allow plenty of room. The tread is 5½ inches. The Men's Light Roadster is identical in design and construction with the Road Racer, but has a 5¼-inch tread, and weighs 2½ pounds more. This lists at $90.

SCHOVERLING, DALY & GALES.

Schoverling, Daly & Gales, New York, occupy spaces Nos. 98 and 99, and show a full line of Gales, Sterling and Gotham wheels.

The Gales 24-pound roadster lists at $80; 21-pound roadster, guaranteed, $90.

Gales Ladies', 25 pounds, $85.

Gotham, 24 inch, 23 pounds, $40.

Gotham, 26 inch, 24 pounds, $50.

Gotham, 28 inch, 28 pounds, $60.

Sterling, from 20 to 25 pounds, at $100 to $125 list. This line of sundries is very complete, comprising everything for which there is any demand, and they have also some special leaders, particularly in Powell & Hammer lamps, for which they are American agents.

PEERLESS MFG. CO.

Peerless Mfg. Co., Cleveland, Ohio: Four models of Peerless and Triangle cycles: Model B B (racer), 17 to 18 pounds, $125; Model G, 21½ pounds; Model H, 25 pounds; Model K (ladies' cycle), 24 pounds; all above list $100.

CUSHMAN & DENISON.

Cushman & Denison, New York, show at stand No. 137 their "Perfect" Pocket Oiler, which has been still further improved for 1895, and is made in the very best manner possible. Price 25 cents. Also their "Star" Oiler, which is also a well-made oiler. It is one of the best of the medium grade oilers, and is largely used with the cheaper wheels. Price 10 cents each. They further show Oiler Holders and Pump Holders, to carry an oiler or a pneumatic pump on a bicycle, which will fit any wheel. Price 25 cents. The exhibit consists of their World's Fair case and their stand handsomely covered with plush. Joseph W. Cushman and Robert G. Grunert are in charge.

SNELL CYCLE FITTINGS CO.

The Snell Cycle Fittings Co., Toledo, Ohio, exhibit a very handsome case of complete bicycle fittings, including

SECOND VICE-PRESIDENT R. LINDSAY COLEMAN.

balls, heads, bottom brackets, pedals, lubricators, and, in fact, everything necessary for the building of bicycles. Also a case including every style of lamp they make, and a large board, framed like a picture, includes every kind of drop forgings that they manufacture. The exhibit also includes an adjustable handle bar, three new designs in pedals, and two new designs in lamps.

Digitized by Google

EAGLE BICYCLE MFG. CO.

The Eagle Bicycle Mfg. Co., Torrington, Conn., exhibit their complete line. This comprises Model A, track racing machine at 17 pounds; Model B, a light road machine at 21 pounds. Both of these machines are built on the same lines. They have large tubing and detachable sprockets front and rear. Their other styles are model C, a substantial road wheel, weighing 23 pounds; Model D, a deep frame machine, and Model E a new and very beautifully designed ladies' wheel. They also show their patented Eagle, aluminum rims, in new styles for cemented tires, and also in new styles for Dunlap and G. & J. clincher tires. The Eagle cold-swaged frame has been further developed, and the frames of all their wheels are made under this process, which largely increases the strength of the frame and adds to the beauty of appearance. In addition to the above they show a tandem machine weighing under 40 pounds, of new and graceful design.

PLYMOUTH CYCLE MFG. CO.

Plymouth Cycle Mfg. Co., Plymouth, Ind. Models of Smalley cycles; Smalley Special, in two heights of frame, 21 pounds; Light Roadster, 24 pounds; Ladies' Smalley, 27 pounds; Ladies' Special, 23 pounds; all above list $100. Track Racer, 17 pounds, $125; Buck Racer, 19 pounds, $125; Model 1894, 25 pounds, $100; Racer, 28 pounds, $100.

SPALDING & CO.

A. G. Spalding & Co., Chicago and New York, representing the Lamb Mfg. Co., of Springfield, Mass., eight models of Spaldings and two of Credendas: Model A, 26 pounds; Model B, 25 pounds; Model C, 23 pounds; Model D, 22 pounds; all above list $100. Model E, (racer) 19 pounds, $125; Model F, (ladies') 26 pounds, $100; Model G, (ladies') 25 pounds, $100; Special, (built to order), $125; Credenda, 26 pounds, $75; Ladies' Credenda, 26 pounds, $75. Spalding Cyclometers and Spalding Chain Lubricant.

WARWICK CYCLE MFG. CO.

Warwick Cycle Mfg. Co., Springfield, Mass. Seven models of Warwick cycles: Model 21, roadster, high frame, 20 pounds; Model 22 (ladies' drop frame), 23 pounds; Model 23, roadster, low frame, 20 pounds; Model 24 (ladies' diamond frame), 20 pounds; all above list $100. Model 25, 25 pounds (roadster); Model 26 (ladies' cycle), 27 pounds; all above list $80. Model 27, racer, 26 and 28-inch wheel, 17s pounds, $125.

SYRACUSE CYCLE CO.

Syracuse Cycle Co., Syracuse, N. Y. Six models of Syracuse cycles: Syracuse Pacer, 23 pounds; Syracuse Thelma (ladies' cycle), 36-inch wheels, 22 pounds; Syracuse Model C, 27 pounds; all above list $100. Special Syracuse, 20 pounds; Syracuse Racer, 26-inch wheel, 15 to 18 pounds; all above list, $125. Syracuse Tandem, two styles, 36 styles, $150.

WOLFF & CO.

R. H. Wolff & Co., New York, three wheels; a 16-pound racer, 17½-pound Wolff Special and a 20-pound road wheel. Tread, 5 inches; gear, 68 inches; price, $100 and $125.

ANGLO-AMERICAN IRON AND METAL CO.

The Anglo-American Iron and Metal Co., New York, occupy space No. 30. They are sole United States agents for Perry & Co., limited, makers of the celebrated Pen steel Bushed Chains, and carry a full line of their goods and specialties. They exhibit all of their new patterns as exhibited at the National Show in London, containing a number of novelties. The exhibit comprises everything entering into the construction of a bicycle down to the very minutest detail. Finished parts, such as ball-steering heads, bottom brackets with plated cranks, racing and roadster hubs, pedals and other fittings, complete frame sets, consisting of various parts in the different stages of manufacture as shown, the Anglo-Humber frame set being their new 1895 model, strictly up to date, particular attention being called to the high finish of every piece, requiring little or no work on the part of the person assembling the various parts. This company, being agents for the following manufacturers, all of the latest patterns of their products are exhibited: Perry & Co., chains, hubs and fittings; Parker & Sanders, lamps and specialties; C. W. Bluemel & Brothers, universal transparent gear cases; Boston Wood Rim Co., stall laminated wood rims; Excelsior Needle Co., swaged spokes and nipples: American Pin Co., coasters, lubricators, ferrules and screw machine work; Persons-Muller Co., saddles and tool bags; Bevin Brothers Mfg. Co., bells, lamp brackets, trouser guards, etc.; Billings & Spencer Co., new pattern wrenches; Crescent Fire Arms Co., bicycle chains; Excelsior Steel Co., cold drawn and cold rolled steel. There are in attendance J. Friedenstein, R. H. Franklin, George Hees and J. Benedict.

WESTERN WHEEL WORKS.

The Western Wheel Works, New York, make a fine showing. The booth is decorated with electric signs and a mammoth electric-lighted crescent in the front of the spaces. In the rear is a very large brass sign announcing the name of the wheels and the makers, and a full nickeled Crescent Scorcher and Ladies' Crescent No. 4. The exhibit includes thirteen models of the Crescent line, men's and women's, the heaviest of all only weighing 23½ pounds. A regular high frame ladies' wheel, 22 pounds, is exhibited, and a special line for both sexes, with 28-inch wheels, at $50 each. The Crescent hubs are very light and small, and

TREASURER W A. REDDING.

the sprocket, the makers say, "is the lightest one on earth, and is entirely new and of their special design;" tread, 5½ inches; saddles, their own pattern and make. Besides these, will be the Juvenile wheels, consisting of the Junior and Pet, which list at $25 and $20, respectively. R. L. Coleman, president of the Western Wheel Works, will be in charge.

BUFFALO CYCLE CO.

The Buffalo Cycle Co., Buffalo, N. Y., show the Fleetwing and Envoy, besides other wheels; also Shamp saddles and an assortment of leading tires used. The Envoy is shown in 26 and 28-inch sizes, with 24-inch height of frame, and the Fleetwing in the same sizes, with 21-inch height of frame. The tread in both styles is 5¾ inches; the hubs are turned from bar steel, and the bearings dust proof. The sprockets are of the latest patterns.

AMERICAN DUNLOP TIRE CO.

The American Dunlop Tire Co., New York, exhibit a full assortment of the Dunlop detachable tires in the following weights: 28 by 1¾, 4 pounds to the pair; 28 by 1⅝-inch, 3½ pounds per pair; 28 by 1½-inch, 3 pounds to the pair; 28 by 1⅜-inch, 2 pounds to the pair. The company also exhibit a new valve which requires but a ⅜-inch hole in the rim, besides possessing a very large valve seat. It is fitted with the universal thread. The exhibit is very complete in all its details.

Digitized by Google

W. H. WILHELM & CO.

W. H. Wilhelm & Co., Hamburg, Pa., exhibit their full line of wheels, viz.: Nineteen-pound Racer, 23-pound Road Racer, 28-pound Roadster, 26-pound Ladies', 42-pound Tandem and 45-pound Combination Tandem. These six wheels are four singles and two tandems. Singles, 19 to 27 pounds; price $100. Tandems, 45 and 47 pounds; price $125. The tandems are the feature of their exhibit. Wilhelm & Co. state that they have been amazed at the great number of inquiries which the display of their wheels of this type has created, and there is little doubt that the popular price of $125 will do much toward popularizing this machine. They are built in two forms; for two men and for a man and woman. Both are attractive-looking wheels, and appear of excellent value for the money. Both are double steerers. In the singles, nothing particularly new is in evidence. Wood rims will be used almost exclusively. The tread has been narrowed to 5¾ inches. Sixty-three inches will be the standard gear.

AMES & FROST CO.

Ames & Frost Co., Chicago, Ill., occupy space No. 95. They show their complete line, which consists of the following:

Model 15, road wheel, wood rims, weight 25 pounds.

Model 16, road wheel, steel rims, weight 26½ pounds.

Model 17, road wheel, 23 inch frame, wood rims, weight 25 pounds.

Model 18, light racer, wood rims, weight 19 pounds.

Model 19, road racer, wood rims, weight 22 pounds.

Model 20, ladies' wheel, wood rims, weight 23 to 25 pounds.

These goods are shown by the Eastern traveling man, W. H. Killin, and also Albert W. Moore. F. L. Bryant, secretary and superintendent, is also in attendance, and is fully prepared to answer all questions regarding the merits of Imperials.

H. G. SHEPARD & SONS.

H. G. Shepard & Sons, New Haven, Conn., show a large number and great assortment of Bicycle Wood Rims, and have a big display of wood dress guards for ladies' wheels. This is comparatively a new departure in cycle making, and appears to be one of the greatest improvements made since the introduction of wood rims. They certainly beautify and add much to the harmony of a ladies' bicycle. They also show remarkable specimens of wood bending, and among others, a piece to which is attached a placard offering $100 in gold to any wood rim maker in America who will duplicate the same. This firm took the highest award for wood-bending given at the Paris Exposition in 1888, and show the diploma and silver medal that were awarded them at that time. Their exhibit is one that will interest any bicycle manufacturer who likes to see good work.

HULBERT BROTHERS & CO.

Hulbert Brothers & Co. are showing their line of Majestic wheels. Their No. 6 Majestic is their men's model of '95 wheels, which model has been brought up to date, has a high frame, and the weight is 23 pounds; lists $75. Majestic No. 7 the '95 ladies' wheel, is built of entirely new design, in which the frame has been very much strengthened from last year's pattern. The weight of this wheel is 25 pounds and the list is $75. No. 7 Majestic wheel is their new light men's racing wheel, '95 model. This wheel is of extra fine finish, and weighs 19 pounds; list $100. They are also exhibiting a number of bicycle specialties of their own manufacture, with wrenches, trouser guards, pumps, etc.

DAVIS & STEVENS MFG. CO.

The exhibition of the Davis & Stevens Mfg. Co., Seneca Falls, New York, consists of the well known Cyclone Foot Pumps, Nos. 1, 2, 3 and 4, and the Tornado and Tornado Jr. Floor Pumps. They also show the Power Cyclone No. 1, connected to an air tank filled with compressed air and ready to fill all tires on exhibition wheels, free of charge; also nipples and clamps to connect all their pumps to all kinds of tird valves. Special hose for cycle pumps (their own patent), and all sizes of cupped plunger leathers for air pumps. They are also selling agents for the "Perfect" Pneumatic Saddle, which is on exhibition in space No. 49 with them. F. N. Stevens has charge of the exhibit.

L. C. SMITH TIRE CO.

L. C. Smith Tire Co., Syracuse, New York: This company show at stand No. 10, the well-known L. C. Smith Detachable Tire in four sizes and four weights, ranging from three to four pounds. They say that their tire is especially adapted to wood rims, being so constructed as to allow the use of a small, neat, wood rim, and with the aid of a light weight steel shifting band, the liability of splitting the rims is reduced to a minimum. They also display several wheels fitted with their tires. Their stand is in charge of C. A. Benjamin, manager, assisted by two other gentlemen.

BRIDGEPORT GUN IMPLEMENT CO.

The Bridgeport Gun Implement Co., New York, display a fine line of Bridgeport Cyclometers, in three models, A, B and C. Model A registers one thousand miles and repeats, or can be set back to zero at will; Model B has a bell attachment which rings at every mile; otherwise it is the same as Model A; Model C registers ten thousand miles and repeats. This cyclometer is designed for touring wheelmen and club mileage records. The company also exhibit lamp brackets, wrenches, oilers, whistles, lubricants, etc., in a most attractive manner.

NEW DEPARTURE BELL CO.

New Departure Bell Co., Bristol, Conn. This company exhibit a full line of their Bicycle Bells and Lucas Lamps. The bells are of their own manufacture, and they are the sole representatives of the United States for the Lucas Lamps. They are bringing out this year a new bell called the "Midget," which only weighs three ounces, and which is entirely new in its construction and operation, and sells for a low price. The exhibit is in space No. 26.

RELAY MFG. CO.

The Relay Mfg. Co., Reading, Pa., occupy space No. 88 in charge of John R. Miller, president, J. George Ziegler, general manager, and William Laramy, one of their traveling force. Their line consists of the Special, 21½ pounds, Roadster, 25 pounds, Crown, 26 pounds, and the Ladies', at 25 pounds. At the Chicago show their visible ball bearings attracted great attention, as well as their reversible, interchangeable and detachable sprocket.

M'MULLEN & CO.

R. B. McMullen & Co., New York and Chicago, are the selling agents for the Garford Mfg. Co., Elyria, Ohio; the Hunt Mfg. Co., Westboro, Mass.; the Indianapolis Chain and Stamping Co., Indianapolis; C. J. Smith & Sons. Milwaukee, Wis.; the Union Drop Forge Co., of Chicago; the Shelby Steel Tube Co., Shelby, Ohio., and the Hartford Rubber Works, of Hartford, Conn. The products of all these concerns are shown.

THE CLIMAX STOPPER CO.

The Climax Stopper Co., Nc. 22 College Place, New York show their folding luggage carrier. It is made of aluminum, weighs but four ounces, and is easily adjusted. They also show the Climax Combination Brake, Coaster and Lock. This device is a foot brake so arranged that it can be used for locking the wheel when the same is not in use. It is made of Crescent steel and is nickel-plated.

M'KEE & HARRINGTON.

McKee & Harrington, Lyndhurst, N. J., show a Special Racer, full nickel, 17½ to 18½ pounds, $135; Semi-Racer, 21 to 22 pounds, $125; Light Roadster, 24 to 25 pounds; Roadster, 28 pounds; Lady Lyndhurst, rattan guard, 26 to 28 pounds; Lady Lyndhurst, special, without guard, 21 to

Digitized by Google

22 pounds; all above list $100. Lady Lyndhurst, special with guard, 22 to 23 pounds, $115.

UNION CYCLE MFG. CO.

The Union Cycle Mfg. Co., Boston, show their 1895 Union Crackajack in three heights of frame, namely: 22-inch, 24-inch and 26-inch; a new road wheel, which weighs 20 to 21½ pounds; also the Improved Special, which has been largely used by Sanger and Tyler. Also their Model A, a 26-pound roadster; besides a new model ladies' wheel; weight, 23 pounds.

BOSTON WOVEN HOSE & RUBBER CO.

The display made by the Boston Woven Hose & Rubber Co., Boston, consists of four styles of tires, the Vici, Neverslip, Evertite and a hosepipe single tube. The tires are made in the following sizes: 26-inch, 1¾, 1⅝ and 1½; 28-inch, 1¾, 1⅝ and 1½. The weights range from 3 pounds to 4½ for both front and rear tires. They are fitted with Vici and "T & T." valves.

ST. LOUIS REFRIGERATOR & WOODEN GUTTER CO.

The St. Louis Refrigerator & Wooden Gutter Co., St. Louis, Mo., exhibit their Lu-mi-num Cycles in seven models, comprising racers, roadsters and ladies' wheels, with weights running from 15 to 25 pounds. The frames, forks, handle bars and seat posts of these machines are made of a special aluminum alloy containing 96 per cent. of aluminum.

HITCHCOCK MFG. CO.

The Hitchcock Mfg. Co., Cortland, N. Y., exhibit eight wheels, five of the regulation pattern, and three Motor cycles. The regular line comprises the Emperor and Empress, Cortland and Lady Cortland, Emperor Special, two-wheel and tandem Motor cycles, and four wheel Victoria; also a large display of wood rims.

WALTHAM MFG. CO.

The Waltham Mfg. Co., Boston, Mass., display five models of Orient Cycles, with unusually large balls in bearings, so that the cone only touches each ball in one place, while the ball itself has only two points of contact, thus reducing friction. The handle bar is also adjustable, capable of being readily changed to any desired position.

CORTLAND WAGON CO.

The Cortland Wagon Co., Cortland, New York: Exhibit consists of their Diana Wheels AA., BB., CC., at $100, and A, B, C, at $75. These wheels weigh from 17 to 25 pounds, and are built in 22 inch, 24 inch and 26 inch frames. They also show both finished and unfinished parts. E. B. Richardson is in charge.

STERLING CYCLE WORKS.

The Sterling Cycle Works, Chicago, Ill., exhibit the following specimens of Sterling Cycles: Model L, ladies' 26-inch wheel, 25 pounds; Model G, 26 pounds; Model K, 23 pounds; Model I, 22 pounds; Model H, racer, 19 pounds. The wheels are shown in a variety of finishes, including white enameled.

BLACK MFG. CO.

The Black Mfg. Co., Erie, Pa., exhibit nine samples of Tribunes. They also display parts in all stages of construction. The machines are made in 21½, 24 and 26½-inch heights of frame; the hubs are cut from bar steel, the sprockets are cyclodial, and the tread five inches. The wheels show careful finish.

G. W. COLE & CO.

G. W. Cole & Co., New York and Chicago. This exhibit includes a large line of anti-rust, cleaning and lubricating compounds for bicycles and other fine machinery, known to the trade as "3 in 1." This company also shows a rust remover and polish for nickel, steel, iron, brass and other metal, which is called "R. R."

RICH & SAGER CO.

The Rich & Sager Co., Rochester, N. Y., have in their booth a nickel-plated revolving stand, upon which they expect to display their saddles with good effect. They also exhibit the Beauty Child's Seat, Sager Toe Clips, Sager Pneumatic Pads andother specialties.

MECHANICAL FABRIC CO.

The Mechanical Fabric Co., Providence, R. I., occupy space No. 154. Their exhibit consists of Flexifort Inner Tube Tires, Conqueror Hose-pipe Tires, Tubes, Valve Stems, etc. There are in attendance Allan Aldrich, Arthur E. Friswell and Edward B. Kelley.

ELASTIC TIP CO.

The Elastic Tip Co., Boston, show a full line of repair kits, oilers, wooden rim cement, rubber solution, wooden rims, tool bags, wrenches, and, in fact, a full and complete line of sundries. One of the special features of the exhibit is the Midget repair outfit.

UNITED STATES TIRE CO.

United States Tire Co., No. 33 Barclay Street, New York, occupy space No. 129, and show the United States mechanically fastened tire, comprising road tire, road racing tire and track racing tire; also tires for sulky wheels. A. J. Cahill, general manager, is in charge.

WILLIAMS & CO.

J. H. Williams & Co., Brooklyn, N. Y., show a very complete line of drop forgings, including bottom brackets, crowns, chain-adjusting screws, head clamps, head lugs, hubs, pedal cranks, rear fork ends, rear fork lugs, saddle post brackets, sprocket wheels, etc.

NEWTON RUBBBR WORKS.

The Newton Rubber Works, Newton Upper Falls, Mass., exhibit a full line of tires, single tube, double tube and detachable; also a line of sundries, including pedal rubbers, handles, patching rubber, rubber cement, tire tape, etc.

HUNT SADDLE CO.

The Hunt Saddle Co., Westboro, Mass., show a large line of their saddles and tool bags, among which are found several decided novelties for 1895 as well as marked improvement on former standard patterns.

COLUMBIA RUBBER WORKS.

The Columbia Rubber Works, Chicago and New York, exhibit a fine line of tires for which they are agents. The display includes the Akron, A. and B. Palmer and Simplicity 47, G. & J. Perkins and Frazier tires.

E. C. STEARNS & CO.

E. C. Stearns & Co., Syracuse, N. Y., show several styles of Stearns Cycles: Model A, 23 pounds; Model B, roadster, 28 pounds; Model C, Stearns Special, drop frame, 23 to 28 pounds; Model D, 19 pounds; Stearns Tandem, 40 pounds.

EXCELSIOR NEEDLE CO.

Excelsior Needle Co., Torrington, Conn., make a small but interesting exhibit, consisting of a design made entirely of their products—spokes and nipples in a large frame, set upon an easel.

MORGAN & WRIGHT.

Morgan & Wright, Chicago, have made no effort at display, occupying a space largely for the purpose of meeting their friends. They explain a new quick-repair scheme and a five-buggy tire. Mr. Herrick is in charge.

HILL CYCLE MFG. CO.

The Hill Cycle Mfg. Co., Chicago, Ill., exhibit a large line of Fowler Bicycles. Two samples of these are displayed; also their boys' and girls' wheel.

GORMULLY & JEFFERY MFG. CO.

The Gormully & Jeffery Mfg. Co., Chicago, New York and Washington, exhibit the Rambler and a full line of tires and sundries.

EASTERN RUBBER MFG. CO.

The Eastern Rubber Mfg. Co., Trenton, N. J., exhibit the Rex, Arrow, Climax and Universal Tires.

NEW YORK TIRE CO.

The New York Tire Co., New York, show the New York Tire and Pneumatic Tired Carriage Wheels.

Digitized by Google

THE GARVIN MACHINE CO., NEW YORK.

The Garvin Machine Co., New York, exhibit a large line of bicycle machinery for the making of hubs, spokes, spoke nipples, sprocket wheels, and nearly all the necessary machinery used in the construction of cycles. They also show the revolving stand of photographs that constituted their sole exhibit at Chicago. One of the features of this display consists of two strings of uncut bicycle hubs each 20 feet long.

STANDARD WATCH CO.

New York Standard Watch Co., No. 11 John Street, New York, display the "Standard" Cyclometers and Bicycle Watches. A taking feature is a bicycle run by electricity, at twenty-five miles per hour, showing the working of a cyclometer. There is also a large wheel six feet in diameter, constructed like a bicycle wheel, on which are fastened three hundred cyclometers made in nickel and gilt, lit up by electricity. E. T. Webbe is in attendance. Space No. 49.

The first great Show is in progress with a large and interesting attendance as we go to press. Further information, with report of the annual meeting of the organization having it in hand, must be reserved for a later issue.

Hardware Club Notes.

The following list gives the names of those elected to membership in the Hardware Club on January 15, 1895:

S. R. Droescher, No. 58 Warren Street.
Wm. R. Hill, No. 64 Reade Street.
Joseph Milbank, No. 11 Pine Street.
John J. Gilroy, No. 101 Front Street.
Wm. S. Fearing, No. 100 Chambers Street.
Geo. B. Mead, Jr., No. 71 Hudson Street.
Brewster Maverick, No. 176 Fulton Street.
Lewis R. Speare, Boston, Mass.
W. A. Redding, Potter Building.
E. M. Burrall, Waterbury, Conn.
Theo. K. Russell, No. 31 Nassau Street.
Benj. R. Western, No. 111 Liberty Street,
Mfrs. Advertising Bureau.

The following gentlemen will act as a reception committee for the Hardware Dinner to be held at Sherry's on the evening of January 31st: Peter McCartee, chairman; Robert Sickels, James D. Foot, George J. Laighton, Frank J. Oliver, T. J. Atkins, Terence F. Curley. The committee are requested to be on hand at 5:30 P.M., sharp.

Tickets for the dinner are now ready, and can be had by subscribers upon application to the clerk at the Hardware Club.

A New Partnership.

William H. Cole, who has managed the business of the firm of Tower & Lyon, No. 95 Chambers Street, during Mr. Tower's long illness, and Charles S. Gallager, have been taken into partnership by Mr. Tower. Mr. Gallager has been in the employ of the firm for many years, taking charge of the large trade. He is well known, having been associated with the trade for over twenty-five years. Mr. Gallager will continue to look after the large trade in the interest of the house. The new firm will continue under the old name, and will still represent the Union Hardware Co., Torrington, Conn., as their selling agents. Mr. Tower is one of the directors of the company.

David Eastman, No. 64 Reade Street, New York, has become agent for Stropine, that well-known razor strop dressing manufactured by the Stropine Co., Boston. Mr. Eastman is a live, energetic man, and in this case it seems to us a good article has fallen into good hands.

Morgan L. Ott and William P. Heiskell, leading Hardware merchants of Wheeling, W. Va., were among the recent visitors at the Hardware Club.

Hardware Merchants' & Manufacturers' Association of Philadelphia.

NINTH ANNUAL DINNER GIVEN IN PHILADELPHIA, WITH GREAT SUCCESS.

ELECTION OF OFFICERS.—SPEECHES BY LEADING REPRESENTATIVES OF THE TRADE GIVEN IN FULL.—AN EVENT TO BE LONG REMEMBERED.

The Hardware Merchants' & Manufacturers' Association of Philadelphia held their annual election of officers on January 15th; the elections were unanimous. The following officers were chosen: Wm. W. Supplee, president, second term; Samuel Disston, vice-president, and T. James Fernley, secretary-treasurer. The ninth annual dinner of the Association was given on the evening of January 23rd at the Manufacturers' Club in Philadelphia and proved a brilliant affair.

The guests had no trouble in knowing that it was a Hardware dinner they were attending, as evidences of the trade met their eyes wherever they turned. Besides the beautiful decorations of palms, carnations, roses of all hues, smilax, tulips and many other hothouse productions, the dining room was uniquely trimmed with files of all sizes and descriptions supplied by the McCaffry File Co. and by G. & H. Barnett; lawn mowers furnished by the Pennsylvania Lawn Mower Co. and Enterprise Mfg. Co.; hammers donated by Fayette R. Plumb; saws from H. Disston & Sons; and a Crimson Rim bicycle, for which the Supplee Co. are agents, occupied a prominent place. The Kearney & Foot File Co. presesented each guest with a neat aluminum match safe with his monogram engraved thereon, and the Keystone Dog Collar Mfg. Co. furnished beautiful dog collars which served as napkin rings. Many of the guests carried away hammers, files, saws aud other articles as souvenirs of the occasion. Philadelphia has been accused of slowness, but in hospitality she is in the front rank. All who journeyed over to the Quaker city as guests of the Association will bear out the above statement.

At the plate of each diner was a neatly gotten-up menu, tied with red or white silk cords and tassels. In it were found the names of the members of the Association and of the guests, as follows:

GUESTS.

C. A. G. Riege	Archibald Paull Mitchell,
H. N. Barnett,	H. E. Asbury,
R. H. Spurgeon,	C. W. Asbury,
Geo. S. Windle.	R. R. Williams,
Alfred W. Barnett,	Wm. H. Magoffin,
Henry W. Scattergood,	Walter F. Hull,
Henry W. Gosling,	Chas. H. Reckefus, Jr., M. D.
Samuel E. Carver,	Wm. V. Sauter,
Jas. D. Green,	F. K. Mears,
W. D. Walkley,	Jacob M. Vogdes,
W. H. Williams,	John P. Murta,
Thomas Walter,	T. A. Fernley, D. D.,
Joel J. Bailey,	Frank G. Drew,
J. Wesley Supplee,	A. N. Diller,
J. C. Bowe,	Edward H. Remsen,
Frank W. Huff,	Silas W. Pettit,
Frank West,	James Pollock,
Charles F. Warwick,	Major E. A. Hancock,
Walter T. Bradley,	H. C. Marshall,
Wm. Steele,	Dr. H. E. Goodman,
Wm. R. Howell,	Stanley G. Hurlburt,
John Roberts,	Walter E. Rex,
R. O. Moon,	Thomas Hobson,

R. H. Robson.

The full page diagram here given shows the arrangement of the tables. The menu needs no praise; it speaks for itself.

TOASTS.

1. INTRODUCTORY REMARKS.....MR. WM. W. SUPPLEE
Pres. of the Association.
"Happy is Rome of all earth's free States
To have so true and great a President
For her inferior spirits to imitate
As Cæsar is."—B. Jonson.

2. TRUSTS—Are They Beneficial?.....MR. FAYETTE R. PLUMB
Ex-Pres. Association.
"Wilt thou make a trust a transgression?"—Much Ado About Nothing.
"The mouse that only trusts to one poor hole
Can never be a mouse of any soul."—Pope.

3. CLUB LIFE—What are its Advantages?.....MR. SILAS W. PETITT
Pres. Union League.
"I'll dine above with you to-day.
And shrive you a thousand idle pranks."—Whittier.

4. POLITENESS .....MR. LOUIS W. KLAHR
"He is just polite enough to be able to be very unmannerly with a great deal of good breeding."—The Jealous Wife.

5. TENOR SOLO.....Mr. JOHN R. GRIFFITH

SHORT ADDRESS.....MR. CHAS. F. WARWICK

6. POLITICS AND BUSINESS.....MR. WM. H. WILLIAMS
Pres. New York Hardware Club.
"Fitness to govern is a perplexed business."—Bacon.

7. REMINISCENCE.....MR. SAMUEL DISSTON
Vice President of the Association.
"Exceeding wise, fair spoken, and persuading;
Lofty and sour to them that loved him not;
But to those men that sought him, sweet as summer."—Henry VIII.

8. OUR ASSOCIATION—Is it Successful?.....MR. T. JAMES FERNLEY
Secretary-Treasurer.
"There are many objects of great value to man which cannot be obtained by unconnected individuals; but must be attained, if attained at all, by association."—Daniel Webster, [speech, Pittsburg, 1833.]

9. BARITONE SOLO—"Answered".....MR. J. H. VAN NEWKIRK

10. SOCIAL INTERCOURSE—Does it Promote Longevity?
"I am Sir Oracle MR. JAMES POLLOCK
And when I ope my lips let no dogs bark."—Shakespeare

11. AFTER DINNER SPEAKING—Does it Aid Digestion?
MR. ALFRED C. REX.
"Then I commended mirth, because a man hath no better things under the sun than to eat and to drink and to be merry."—Solomon.

12. FINANCE—What do I Know About it?.....MR. R. R. WILLIAMS
Hardware Editor, Iron Age.
"Oh, what men dare do?
What men may do?
What men daily do?
Not knowing what they do."—Much Ado About Nothing.

13. TENOR SOLO..... MR. STANLEY G. HURLBURT

14. TAXATION—Is it Policy to Tax Manufacturers?
MR. FRANK H. TAYLOR
"A little harm done to a great good end
For lawful policy remains unacted."—Lucrece.
"You will be whipped for taxation one of these days."—As You Like It.

15. OUR QUAKER CITY FRIENDS—What Does Thee Think of Our Yearly Meeting?.....MR. ARCHIBALD PAULL MITCHELL
President HARDWARE Publishing Co.
"The grace of Heaven
Before, behind thee on every hand
Enwheel thee round."—Othello.

16. THE SWEET BYE-AND-BYE—What Shall the Harvest Be?
MR. JAMES H. RITTER
"The weary sun has made a golden set
And by the bright track of his fiery car
Gives tokens of a goodly day to-morrow."—Richard III.

The first speaker was William W. Supplee, of the Supplee Hardware Co., and president of the Association. He spoke as follows:

PRESIDENT SUPPLEE'S OPENING REMARKS.

Gentlemen of the Hardware Merchants' and Manufacturers' Association and Invited Guests: I desire to extend to all present a sincere and cordial welcome to this the Ninth Annual Banquet of our Association. To those invited guests who have honored us with their presence and joined for the evening our loyal circle, I desire in the name of the Association to extend an especial welcome. I take pleasure, this the first opportunity since our recent election, January 15th, to thank the members of the Association for again selecting me as their presiding officer. By a wise provision in our by-laws no one person is eligible for the position of president more than two successive terms. You have, therefore, conferred upon me the highest possible honor in your power, and I will in the future, as in the past, do my utmost to promote and retain your respect and esteem.

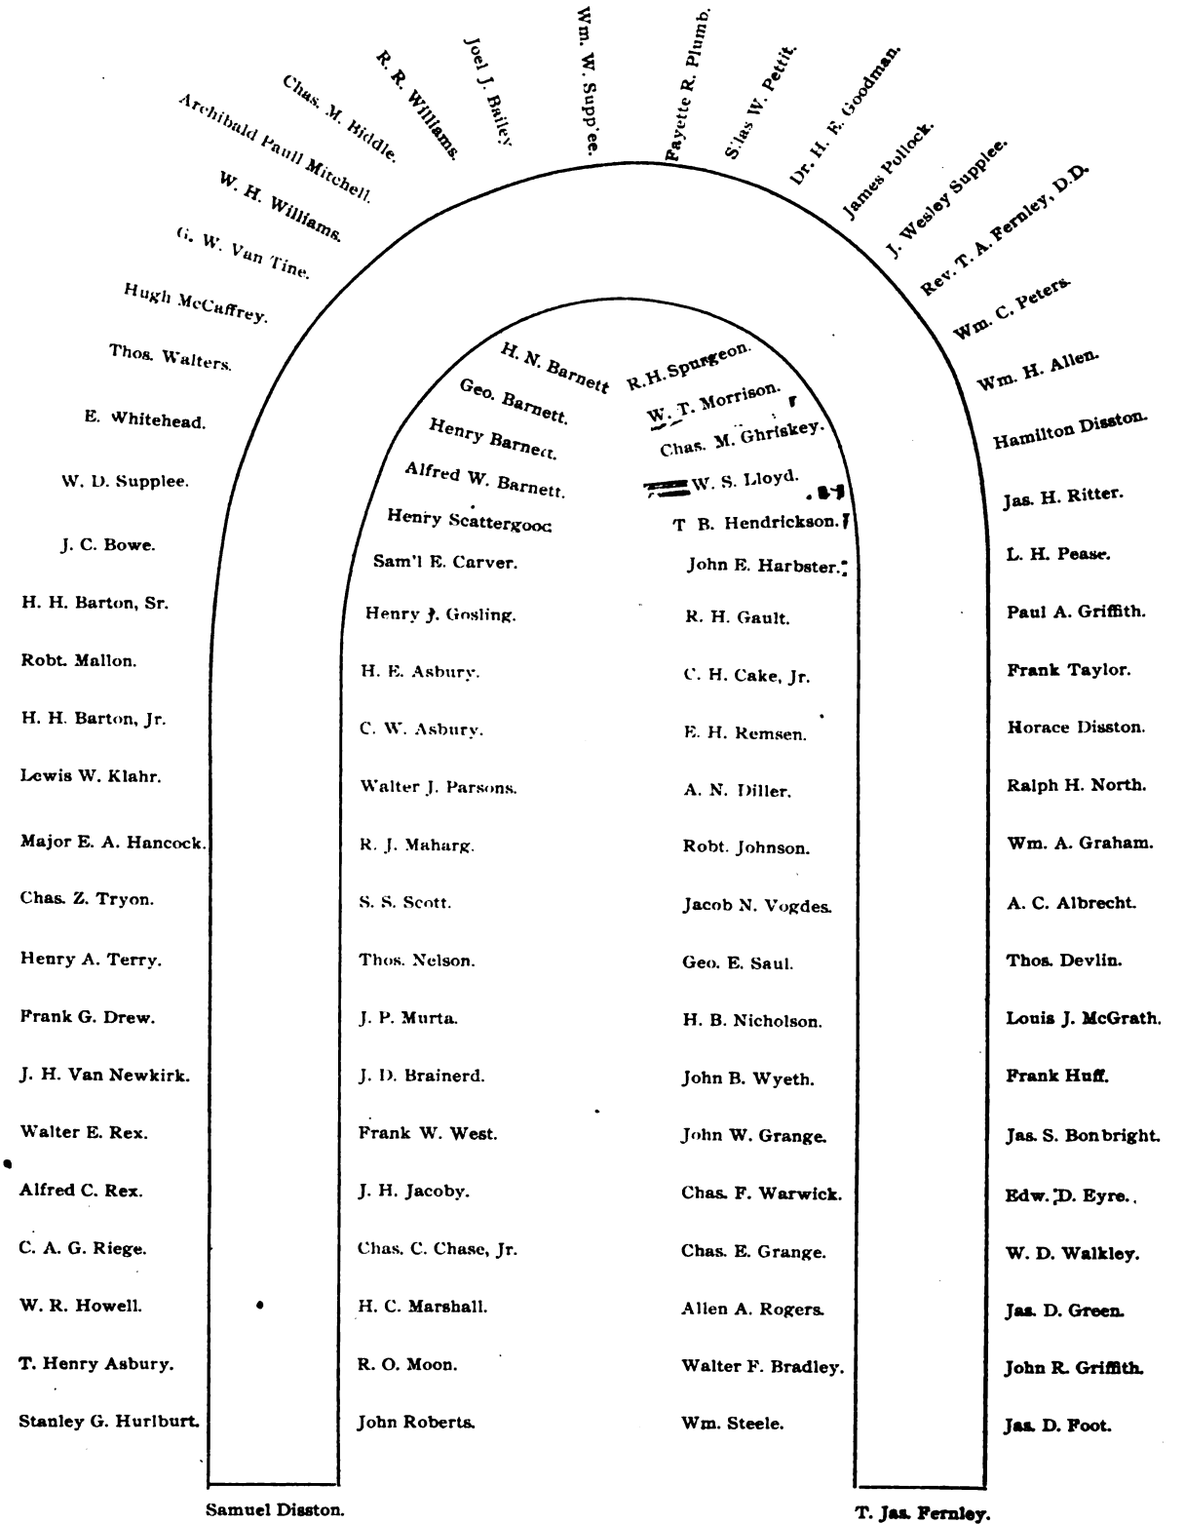
Since I stood before you one year ago we have added largely to our membership, and have taken the lead through our charter to become the first incorporated Hardware association in the United States. We may also look with pride upon our being the oldest living Hardware association in the country, and I have no doubt that our business and social success has paved the way, prompted and encouraged other local associations that have more recently come into existence. We trust that all these may be as fortunate as ourselves, for you well know that during our monthly meetings, while important matters have come before us nothing but the most perfect harmony has prevailed.

Among the associations more recent than ours the New York Hardware Club stands prominently before the country, and is represented by its popular president here tonight. This Club is entitled to great credit, especially in having extended its broad field of operation beyond its own State borders, and its phenomenal success is shown by the list of representative members, as well as by the handsome, commodious and luxurious club rooms recently occupied. Following the example of extending its field of usefulness the New England Hardware and Iron Club has thrown out its branches which now reach over the entire New England States. The Southern Hardware Jobbers' Association has grafted upon the tree of local rivalry and antagonism the luscious fruits of business harmony and social intercourse. Recently a number of the representative wholesale Hardware houses of the United States found rooted in our productive soil the desire for a National Hardware Association, and are now asking the loyal support of the trade. Young as the tree is, and rapid is its growth, I feel its branches will soon extend over every State in our beloved country. The benefits of this new association I predict will be of no narrow compass.

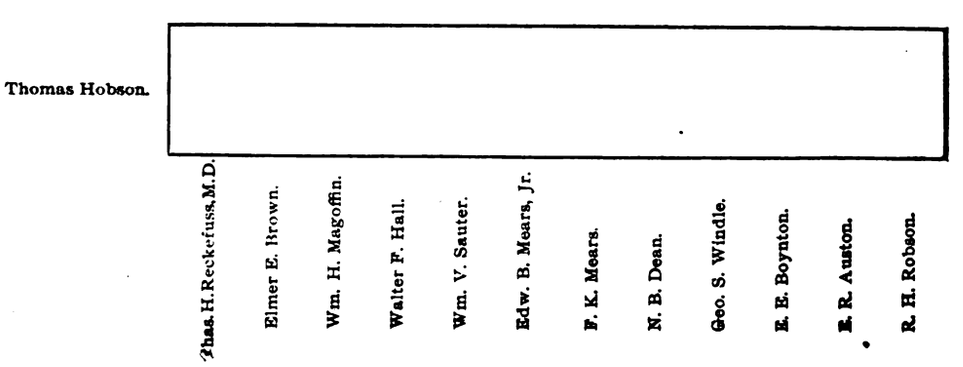
The avenues of trade are crowded with the busy throng. When once you enter retreat is dangerous. In the bitter struggle for trade one may fall by the wayside, but retreat against the surging crowd may be disastrous. Bandits may lurk in the dark corners, guerilla warfare even arise, partisan incompetency or insincerity may riddle you with bullets. impediments from conflicting State statutes may confront you.

Then why not improve the roads of progress wherever practicable, and light the avenues with all possible facilities? No one man or set of men can accomplish these desired results alone. While there are various grades of houses, there are various grades of intelligence, and the good Lord does not always confine the largest intellect to the biggest body.

The quotation below my name on the menu reads as follows:



"Happy is Rome of all earth's free States, to have so true and great a president for her inferior spirits to imitate, as Cæsar is."



This you will admit is rather ambiguous and flattering at the hands of friends. A few weeks ago a prominent divine of our city took for his text, "Ye are known by your fruits." In our modern times he might with equal truth and force have taken a text, "Ye are known by your friends." Who but kind friends have placed me in the position I occupy tonight? Who but kind friends, without any knowledge on my part, placed me as the initial standard-bearer of the National Hardware Association of the United States? It is kind friends that make desirable fruits possible. Who but kind friends pressed the great honor of the presidency of the Union League upon the shoulders of one of our honored guests? and who but his friends distanced his illustrious and distinguished rival?

In the words of Rambler, "There can be no friendship without confidence. There can be no confidence without integrity."

I desire once more to thank my friends for their generous and flattering estimate of my efforts. As you will notice from the list of toasts upon the menu, I am expected to rise twelve times during the evening. Will therefore no longer encroach upon valuable time.

Digitized by Google

The next speaker, Fayette R. Plumb, ex-president of the Association, spoke on Trusts—"Are they Beneficial?" He spoke as follows:

Mr. President, Gentlemen and Invited Guests: The subject assigned me is such a profound one, calling as it does for deep thought, combined with thorough knowledge of the points to be considered, that I feel like Robinson Crusoe when he was cast on a desert isle. Combinations are a benefit to the public. It means a decrease of expense which means a reduction of prices to the consumer, which means a benefit to all. This bears the same relation to all as protection does to American labor. If you shut out foreign competition you strengthen the hands of American labor. Consolidations sometimes preserves existence. In closing he paid the following tribute to President Supplee: "May the star of destiny continue to cast its radiant beams across his pathway until it guides him to success which his highest ambitions dictate."

MR. PETITT'S REMARKS.

The next on the list was Silas W. Pettit, president of the Union League of Philadelphia. His remarks were on "Club Life—What are its Advantages?" He said that speaking of this subject was like carrying coals to Newcastle. Clubs have existed ever since the time when ancient Athens was the metropolis of the civilized world, and before the Christian Era. Men in different stations of life meet on a footing of equality in club life.

Louis W. Klahr, of the Klahr Hardware Co., was the next speaker. His theme was "Politeness," upon which he spoke as follows:

LEWIS W. KLAHR ON "POLITENESS."

GENTLEMEN: I must confess I have had all the conceit taken out of me with regard to making any remarks here this evening. I asked one of my particular friends what he thought of my subject. "Well," said he, "it is a pretty good subject, but if it had been 'Gall' it would have been much more appropriate." Now I wish it perfectly understood that, by example, I do not consider myself the proper exponent or champion of politeness, but to those who know and believe that, I would simply say, "Do not as I do, but do as I say."

Politeness is the finishing touch to a man's character, the same as an artist gives his picture. It is polish to a man, grace to a woman, and manners, refinement and good sense to both. It is the essence, or the positive current, of that rare gift called magnetism. To be worth anything politeness should be constant and regular. To be cordial one time and indifferent another, to meet one's acquaintances to-day with a smile, and to-morrow with a countenance as stoical as that of an Indian, counts for nothing.

Politeness can cover a multitude of defects. Accompanied with charming manners, a face not fair can even handsome seem. If the traditional politeness of the ancient highwayman is to be believed, it even made his calling respectable. We would be polite if for no other than selfish reasons. This would lead us never to forget the importance of people. We can never know when we may want the good will of any man, and if we are wise we will not overlook the most humble. "Fleas may not be lobsters, but there are an awful sight of them, and they all have votes." Common politeness is the thing; politeness in public as well as private. No politeness is so much appreciated as that from strangers. If there is any custom worth importing from abroad it would be that of bowing at a public table when leaving it. Some people confuse servility with politeness. Agreeing always with one's friends is not necessarily courtesy. An honest difference of opinion is not at variance with politeness. The close observer of character is suspicious of the man who bows too low. Full well he knows that men can "fawn and flatter while they hate;" and apropos to this some one says: "The same teeth that adorn a smile are most useful in a snarl."

WILLIAM W. SUPPLEE, PRESIDENT.

Politeness can be gallantry, can be reverence, can be hospitality, and *is* humanity.

The proverbial witty Irishman, who ne'er drank his coffee sweetened, when asked by the pretty waiting maid, if he would have sugar in his cup, answered it was already full of sweetness, for sure hadn't she looked into it? A polite refusal full of gallantry. The humble street cleaner on the streets of Paris, when he politely lifts his hat at each passing hearse with its mournful freight of inanimate clay, gives us a touching example where politeness is synonymous with reverence. And the Kentucky Colonel, when he turns his back upon his guest after handing the dark green bottle containing his State and national beverage, so as not to embarrass his friend as to the size of his drink, well can we say "and *this* is hospitality."

Then the Immortal George, even he of truthful fame, who to all his other firsts, should have added "first in politeness," when tipping his hat in response to his colored laborer, and having it remarked upon by a companion, replied, that he never allowed himself to be outdone in politeness by any one, struck the key-note of my whole subject, and it certainly was Humanity.

REMARKS OF MR. WARWICK.

Charles F. Warwick, who is a candidate for Mayor of Philadelphia, next made a few remarks.

BUSINESS AND POLITICS: DISCUSSED BY WILLIAM H. WILLIAMS.

W. H. Williams, of the Van Wagoner & Williams Hardware Co., N. Y., and president of the New York Hardware Club, spoke on "Politics and Business." He prefaced his remarks by saying: "I do not come here where business has been reduced to a science and politics to an art, to teach, but rather to learn. I speak as a business man to a busi-

Digitized by Google

ness man and as a politician to a politician." He then said:

The business life of a nation in this age of modern ideas and modern improvements is so interwoven with its political life, and the interests which control the one influence to so great an extent the other, that we are justified in regarding them as inseparable factors in a civilization whose progress and development concern alike all members of society. It is therefore a question not to what extent a business man may take an interest in public affairs without prejudice to his position in the commercial world, but rather to what extent can he keep aloof from them without prejudice to his business interests, and without neglecting his duties to the State.

Politics has been broadly and justly defined as the "science of government," and also as "the management of a political party," and a political party as "one of the parts into which a people is divided on questions of public policy."

It will not be denied that so long as there exists in the human family diversity of taste, of interest, and of opinion, so long will there exist political parties. To-day they may be known by one set of names, and to-morrow by another, advocating or combatting policies and principles, but always with us, commanding our attention and influencing our fortunes whether we will or no.

Wisely, I think, but whether so or not, ours is a government by parties, and the responsibility for the purity, efficiency and wholesomeness of the party is laid upon the citizen; and so it is that politics has claims upon us equal to those of church, of business, of society, or of home. We cannot ignore them and be true to God or country.

As the fireside of our home is the altar from whence flow the influences which ennoble human life and dignify human endeavor, so from the political primary which is the fountain head of our political life, go the influences which shape parties and determine our national character. He who shirks his duty to his party, or keeps aloft from all parties, does not, in my opinion, deserve the protection he receives from his government, in life, liberty, the prosecution of his vocation or the pursuit of happiness.

Far too many men are content to be "obscurely good." They take a cowardly refuge in Addison's lines: "When vice prevails and impious men bear sway, the post of honor is the private station," instead of bearing a manly part in the endeavor to dethrone vice and relegate "impious men" to the rear.

I am not one of those who decry partisanship in business, in religion or in politics. I do not think it is necessarily allied to bigotry or to prejudice. Within limitations prescribed by conscience and by intelligence I believe it to be one of the most powerful auxiliaries which the cause of human progress has had. To my understanding partisanship means believing something and standing by what you believe, and I do not see why it does not hold good in politics as in other things.

No great cause has ever succeeded, no great reform has ever been accomplished without its aid. The partisanship of the brave and indomitable patriots who met in yonder Independence Hall made possible the American Revolution, and in every important epoch of history, unflinching advocacy of what men believed to be right, which is but another name for partisanship, has led the way to the ultimate triumph of the right.

The wisdom and experience of the ages, not less than the precepts and teacings of the Sacred Book, enjoin upon us diligence in business. But in a broad sense we cannot separate business from affairs of State. That policies respecting finance, taxation, tariffs and commerce underlie and control business prosperity, will hardly be denied in view of recent national experience. That business men should have no part in determining these policies, directly or indirectly, is to leave them often to inability and incompetency.

That wholesome political activity which enlists the earnest thought and co-operation of the business world best promotes the welfare of society.

If business men would give to politics and to political duties a part only of the time which they bestow upon pleasure and other pursuits and occupations outside of business, the atmosphere of our public life would be purer and cleaner, and the words "ring and gang rule" would be banished from our political vocabulary.

SAMUEL DISSTON, VICE-PRESIDENT.

The next speaker on the list was Samuel Disston, of Henry Disston & Sons, vice-president of the Association. Mr. Disston having an important engagement was excused.

T. James Fernley, of the Keystone Dog Collar Mfg. Co., and secretary-treasurer of the Association, the next orator, had for his theme "Our Association—Is it Successful?" His remarks were as follows:

T. JAMES FERNLEY ON OUR ASSOCIATION.

Mr. President and Gentlemen: I feel that I owe you an apology for occupying your time this evening, particularly in view of the fact that so many men of well known ability are gathered around this board. Many of our guests have national reputations as public speakers, and, indeed, some of our own members are rapidly forging to the front rank of after-dinner orators.

On December 21st last the president of our Association advised me that he had appointed Fayette R. Plumb, Samuel Disston, Lewis W. Klahr and the speaker as a Banquet Committee. We at once organized by electing the handsome and able manufacturer, Mr. Plumb, as chairman.

Digitized by Google

At our first committee meeting it was very evident that my co-laborers each intended to have an opportunity to air his eloquence, regardless of the rights and privileges of others. They assigned me to respond to this toast, stating that it would not look well to have any of the committee slighted. Should any question the correctness of this assertion I can only refer you to our programme, where each member of the committee has his assignment.

My first recollection of the organization dates back to February 26, 1886, when as a modest, diffident boy, I attended the meeting held that day. It was the second regular meeting after organization. I well remember how I bashfully took a seat in the corner, and felt like offering the gentlemen present an apology for being present. We then had twelve members. Our first president was the late Wm. J. Lloyd, for whose memory we all have the most profound respect. Our meetings were held in the parlors of the American House. It was not long before a movement was started to have permanent Association rooms, and the present delightful, though too small room in the Drexel building was leased and furnished. In January, 1890, our members had grown to about thirty, and my esteemed friend and neighbor, that honorable, upright Quaker merchant, Chas. M. Biddle, was elected to the high and honorable office of president. We all remember how admirably he wielded the gavel. The system of reading essays at our monthly meetings was inaugurated, and those who had never been known as literary men wrote and read essays which reflected credit on themselves, and what would justify their being classed as literary geniuses.

T. JAMES FERNLEY, SECRETARY AND TREASURER.

Can we ever forget the able treatises of McCaffrey, Klahr, Biddle, Ritter, Plumb, W. D. Supplee, as well as that of his esteemed sire?

In this has our association been a success.

Again, under the Biddle administration we took a decided stand in favor of elevated railroads, and, although not successful, yet we hope that our next mayor, who is now nearer my reach than he will probably be after his inauguration, will give our city what we so much want.

In January, 1892, the greatest Parliamentarian in our midst (except Hugh McCaffrey) was elected president. Need I tell you, gentlemen, that Fayette Ramsey Plumb, he who for two years was our official head, made a record which was and is untarnished, and that within a short time he has been honored by election as vice president of one of the noblest institutions in this city, the Union League.

But under our by-laws, which limit the term of president to two years, we were compelled to part with Mr. Plumb, and in January, 1894, Mr. William W. Supplee was elected his successor. Many of the gentlemen around this board remember under what auspicious circumstances he was inducted into office, and at the same time your humble servant was elected to succeed Mr. Edward D. Eyre as secretary-treasurer.

Gentlemen, had I known the capabilities of Mr. Supplee at that time another could have had the honors and labors of my dual office. You will doubtless recall the poetic quotation attached to his name on our *menu* in 1894. It was this:

"Lead us on to victory,
Our strength increase."

At that date we had fifty-five members. After one year of his administration we have ninety-eight members, a gain of forty-three or seventy-eight per cent. Truly he has led us on to victory, and our strength he has increased.

As an organizer, the gentleman who sits here to-night as our presiding officer is without a peer—indeed his ability is of such a high order that at the recent Convention of the Hardware Jobbers of the United States, convened at Cleveland, he was chosen president of the convention, and subsequently elected president of the National Hardware Jobbers' Association. During the past year the surplus fund of our organization has been almost doubled, and in answer to the query, "Our Association, is it successful?" I think I do the oldest and best Hardware organization in this country only just credit by saying that, in all respects, it is eminently successful.

MR. POLLOCK'S REMARKS.

James Pollock, the next on the list, made some remarks on "Social Intercourse—Does it Promote Longevity?"

Alfred C. Rex, though last on the list, was next introduced. He had a train to catch. His subject was: "After Dinner Speaking — Does it Aid Digestion?" He said:

AFTER-DINNER SPEAKING—DOES IT AID DIGESTION?—REMARKS OF MR. REX.

GENTLEMEN: The question attached to the subject assigned to me this evening is somewhat ambiguous. When Sidney Smith was once advised by his physician to take a little gentle exercise before breakfast, on an empty stomach, he quietly asked if it made any great difference whose stomach it was. So I am similarly uncertain whether it is the digestion of the speaker or his unfortunate victims which is in question. If the former, I should say it was an unhealthful performance, for most physicians consider that arduous labor after a heavy meal is, to say the least, injudicious, and an after-dinner speech is certainly hard work for me. If it refers to my audience, I should incline to the opinion that it would not injure their digestion seriously, as the majority of them are in the daily habit of sampling nails, tacks, saws, files, screws and similar articles, and are used to hard wear and tear generally. A certain learned man defines speech as the instrument by which a fool is distinguished from a philosopher, and nothing but an amiable desire to

Digitized by Google

oblige your entertainment committee places me in this position to-night, as I fear I can retain my incognito no longer. Digestion is defined to be the physiological process of converting the food from the state in which it enters the mouth to that in which it can pass from the alimentary canal into the blood vessels and lymphatics. While this process is going on it is necessary that the brain should not be taxed or the mind wearied with much thinking. It shall be my especial care to refrain from doing either of these two things. Man is a social animal; in his pleasures, his sorrows, his work or his play, he needs and seeks sympathy and companionship. This characteristic is especially marked in connection with that bodily function called eating. He takes pleasure in dining with business friends and listening to their sage advice, and incidentally picking up any pointers which may be dropped. Civilization and education have robbed this function of its common-place character, and have thrown around it all the accessories of beauty and refinement. Our tables are resplendent with beautiful china and glassware, and vessels of gold and silver, in the ratio of one to sixteen; our appetites are tempted by all sorts of curious combinations of delicacies, and our palates are tickled by the sparkling vintages of the valleys of champagne and apollinaria. The ancient Greeks and Romans were wont to entertain their guests at dinner by exhibitions of dancing, juggling and sleight of hand by hired performers, The Falernian and Lesbian brands of wine being of too strong a character to permit them to take any active part, but with a wisdom born of nineteen hundred years of progress we allow our guests to entertain themselves by flights of oratory and scintillations of wit and humor. The after-dinner orator is a necessary evil; we cannot get our banquet without him, and, therefore, we must endure him. Like vice,

"He is a monster of frightful mien,
As to be hated needs but to be seen;
But seen too oft, familiar with *his* face,
We first endure, then pity, then embrace."

This suggests to me the first type of an after-dinner speaker I shall mention; the young society man who becomes razzle-dazzled when everybody looks at him. At a dinner party he is suddenly called upon to reply to the toast of "Woman." He gets up with alacrity, for his best girl is present, and says: "Ladies and gentlemen, it gives me unalloyed pleasure to respond to this toast. The poet beautifully says (striking an attitude):

"Oh, woman, in our hours of ease,
Uncertain, coy, and hard to please"——

Er—er—hard to please—everything swims around him; then desperately his mind catches a clue and he continues:

But seen too oft, familiar with her face,
We first endure, then pity, then embrace."

It was said of Cuvier, the great naturalist, that if he were given a single bone he could construct the animal to which it belonged. So with the Depew type of after-dinner speakers. Give him a single joke, even if pre-historic and exhumed from the cave of the Seven Sleepers, and he will build around it such an after-dinner speech that his most dyspeptic auditor will think he has a new triple-riveted, Harveyized digestive apparatus. If the subject which is sprung upon him does not seem to have any connection with the story in his mind, he is in no wise disconcerted. Take for instance, this topic: "After-dinner speaking; does it aid digestion?" He would say the latter part of this subject does not seem to have any bearing upon the former, and yet if we examine it more closely he will see that they are not so widely separated. It reminds me of a little story of the sunny South. A certain young planter in the ante-bellum days was a great sportsman but a greater story teller, and his black boy, Sam, was always called upon to certify to their truth. Sam frequently remonstrated with his master as follows: "Faw de Lawd's sake, Mars' Gawge, don't git yaw fax and de trooth so far apawt. I kin hawdly git 'em togither." At a certain large dinner party the young planter became inflamed with apollinaris, and told how he once shot a buck in the foot and the bullet came out back of the ear. Considerable incredulity was expressed, and he immediately appealed to Sam, who rose to the occasion. "Yas, gemmen and ladies, das so. Yo see it was this a-way. Jist as Mars' Gawge raise de gun to shoot, de buck stopped to scratch he haid an' de ball went froo de hoof and came out back of de ear."

Sometimes the after-dinner speaker is a misanthropic and malevolent person who remembers reading in his schoolbooks that the anaconda, after swallowing a whole ox, and being unable to disguise the fact, for the horns stuck out of his mouth, can be approached by persons whose previous intercourse had been conducted over a long-distance telephone and treated with familiartiy, and even with violence, without being able to resent it; he, therefore, under cover of the lethargy and good nature produced by a twelve-course dinner, delivers a forty-minute address so dry that the dust nearly chokes him as he delivers it. This, however, is good for the digestion, for it produces balmy sleep, Nature's sweet restorer. Then there is the after-dinner orator who has served in the war. He will say, appropo of nothing, "The true philosopher can extract some comfort, even out of misfortune—speaking of making the best of things reminds me of a little incident that happened during the war. When I was with Grant in the Wilderness, a fine young fellow in my regiment, the only son of a poor widow, was shot down and was carried to the rear. After the day's fighting was over, I went to the temporary hospital to look after him. The doctors were about to cut off his right arm, as his elbow was shattered, but he begged to be allowed to keep it. He was told that if it healed it would be stiff, and that he could choose whether he would prefer it straight or bent. A troubled look came over his face as his eyes looked afar off and saw down the vista of approaching years a crippled future. Presently his eyes brightened and a smile stole athwart his features as he said cheerfully, 'Set it for hugging.'"

But the literary man has the "convexity," so to speak, upon all after-dinner orators. He can delve in the Chinese archives and get all the lichen-covered jokes from Confucious down, or extract from Egyptian papyrus rolls some of thse puns whose Lotus' flavor produced such ecstatic sleep upon the ancient Pharaohs that their mummies still preserve the remnants of the smile and work them up in Nineteenth Century costume without fear of meeting that ennuied look which proclaims them "marons disguise." Such is the story of Augustus, which a literary man translated for me from the original Sanskrit. Augustus was a poet, and wrote an alleged poem entitled "Why Do I Still Live?" and sent it to a certain magazine for publication. Three weeks passed, and the poem not appearing, his patience was exhausted, and he wrote a sharp letter asking why the poem was not published, and hinting that envy was at the bottom of it. The next issue of the magazine contained the following in its "Answers to Correspondents:" "Augustus, you sent your poem by mail instead of bringing it in person—this is why you still live." It is a well-known fact that the character of the food affects after-dinner speaking. It has greater influence upon our legislation than the average person imagines. The observing newspaper man goes into the Congressional restaurant in Washington about noon and frequently forecasts the proceedings of the afternoon. A cup of weak tea and a slice of dry toast will bring Senator Peffer on his feet with a bill to endow an old ladies' home; a ham sandwich eaten by Representative Boutelle is the precursor of one of his Hawaiian resolutions; young pigeons on toast will be sure to precipitate a squabble; fisticuffs have been the outcome of an indulgence in Philadelphia scrapple; and when Gorman gets too much sugar in his cold tea he is sure to raise Cain on the floor of the Senate. After-dinner speaking not only aids the digestion as I

Digitized by Google

have shown, but it also improves the moral tone of the diner by cultivating the virtues of charity, patience and forbearance, although the veneer of civilization is sufficiently strong to prevent actual violence. Alkali Ike found it advisable to say at the ball in Roaring Gulch, "Boys, don't shoot the fiddler, he's doing the best he kin," but I hardly think a similar plea on behalf of the unfortunate after-dinner speaker is necessary with this audience. If, during the next few days, we ascertain by sad experience that I am wrong, and that after-dinner speaking does not aid digestion, our case will be similar to that of the young married couple whose honeymoon was beginning to wane. One evening after tea, a very awkward silenee reigned, which he broke by rising to put on his overcoat, preparatory to going to the League. She broke out vehemently, "George, you would have been happier if you had not married me." And he replied: "Yes, darling, but I would never have known it."

REMARKS OF R. R. WILLIAMS.

R. R. Williams, of New York, came next. His theme: "Finance—What do I know About It?" He said: Though there is over $4,000,000,000 of coined money in the world our country finds it difficult to keep $70,000,000 for herself. A gold basis is needed and an elastic currency to meet the demands of the people.

MR. TAYLOR ON TAXATION.

Frank H. Taylor followed with remarks on "Taxation—Is it Policy to Tax Manufacturers?" He said: Taxes are always necessary and always disagreeable. Food, clothing, and tools are not the right things to tax. Property and things of great value that men have accumulated ought to be taxed. No tax should be levied on the vices of the people. Our real objection to the income tax is to prevent our true financial condition from being known.

The next speaker on the list was Archibald Paull Mitchell, president of the HARDWARE Publishing Co., New York. His theme was "Our Quaker City Friends—What Does Thee Think of Our Yearly Meeting?" His remarks were as follows:

ARCHIBALD PAULL MITCHELL'S REMARKS.

Mr. President, and gentlemen of the Hardware Merchants' & Manufacturers' Association of Philadelphia: Believe me, sirs, I am profoundly sensible of the honor you have paid me, in bidding me to this feast of reason and flow of soul. Before me I see those princes of trade and manufacture, whose efforts have gone far toward placing Philadelphia in the front rank of our greater municipalities. There are other cities who, with loud fanfare, proclaim themselves the Great and Only, but not one comes nearer paying one hundred cents on the dollar than this same city of yours. True, some captious critics have had the temerity to express the opinion that your eminent respectability has made some of you stand so erect that you bend backward. To such I would say: "Go carefully!" for, emulous of the fame that Manhattan's famous Lexow committee has gained by its labors, your rulers are preparing the same treat for you. But politicians and politics are *malapropos* on an occasion like this. We are here, as I understand it, to eat, drink and be merry, and, for the time, forget dull care and the grind of daily work.

From time immemorial, it has been the habit of certain after-dinner speakers to make capital for bad jokes about your slow ways and certain methods. To my mind, this characteristic is one of your grandest bulwarks. We read that when William Penn purchased the land upon which your city now stands, he set the pace for future generations by paying spot cash, or its equivalent, for his venture. That, gentlemen, has been the reputation of your traders and manufacturers from that day to this—slow to buy but sure to pay.

Here in your city the artisan as well as the merchant prince is thought entitled to a home, and the thousands of small, but comfortable houses, which may be rented or bought on long payments and easy terms, prove that to all who are willing to work, a home is possible.

In money-mad New York, we have the delectable spectacle of one of our oldest, and outwardly most eminently respectable churches, owning vast quantities of valuable real estate, content to let remain upon their land wretched tenements, which are a disgrace to our civilization. I am convinced that, whatever of success each one of you has achieved, it has come most largely from your environment. The same spirit that prompts you to provide houses for your people, prompts your manufacturers and merchants to be liberal and just in the compensation and encouragement given their employees, who, in turn, imbued with these liberal ideas, become your successors in business, and in public and private enterprise.

In the pursuit of my daily vocation, I have, from the nature thereof, been brought into contact with the leading manufacturers and merchants in your line, all over the United States. In all the cities I visit, I do not find any more satisfactory people with whom to transact business, than in this city; and, after all, I have a right to feel at home in Pennsylvania, for in Fayette County my great-grandfather lived and died, after serving under Washington and Braddock, in their memorable campaign against the Indians and French. He established one of the first furnaces and forges erected west of the Allegheny Mountains, on almost the same spot where now is situated the great Dunbar furnaces, midway between Uniontown and Connellsville. I have often thought: What would be the sensations of those pioneers in the iron industry, could they see the mighty blast furnaces of the present time? The one or two or three tons of cold blast charcoal iron per day, that was then produced with water power, have given way to the steam hot blast mammoths of the present time, whose daily product is greater than a six months' output of the old-time forge.

A shining example of the steadiness and continuity of purpose of a Philadelphia merchant in our line, came to notice within the past two years. In the ordinary course of business, I called on a firm in Market Street, where three names graced the sign above the door. I had been calling there for some years, and was greatly surprised on the visit in question, when I found things at sixes and sevens. The stock had been removed, the shelving was being taken down, and through the debris I made my way to where the counting office was formerly situated, and found there the head of the firm, alone. "What's up? Going to move?" I asked him. "No," he replied "We are going to retire from business—settle up, liquidate, quit." As he spoke, he had in front of him a small individual ledger, and being in a confidential and reminiscent mood, he turned over the leaves and said: "In this little book is the condensed history of my business." Starting thirty years or more ago, with a small capital, he had each year's expenses and gains systematically put down. The net result, I noticed, was in red ink. The first year it required but few figures to express the total, the last—well that is telling—but I caught a fleeting glimpse at the figures, and a cool half million would be rather under than over the amount. He had started in to accomplish a certain purpose, and adhered to it rigidly, and through good times and bad, had patiently shaped his course for the one beacon of independence at a time in life when independence is most needed, and he had succeeded. That, gentlemen, is the history of one of your "slow" Quaker merchants. Now, let me cite the more brilliant career of a mercantile firm in another city, who started business about the same time, with nearly the same capital. This last firm, by a happy combination of talent in its members, possessed in one, shrewd business instinct, combined with caution; the other was a brilliant salesman, magnetic and genial, and had that rare gift of

Digitized by Google

getting the very best possible results out of an employee. For years and years, so long as this firm confined their time, energy and ability to their immediate business, their trade expanded and grew, until the house and its connections were known, honored and envied in every quarter of the globe. From a business humble in its inception, the trade grew until many millions of dollars of business was transacted each year. Profitable, stable, rich, its members became millionaires, and he who had the boldness to predict any evil fortune to that house, would have been looked upon as either a madman or a jealous rival. In an unlucky hour a Western railroad magnate induced one of the partners to go into a bond deal of some Western railroad that ran from no place to nowhere, and from manipulation in Wall Street a profit of some hundreds of thousands of dollars was evolved. That, gentlemen, was the beginning of the end. The old reliable business was too slow. Why, it took two months' legitimate business to produce what was made in a day by speculation in Wall Street. The deadly upas-tree of inordinate avarice had planted its roots, the harvest was coming—and come it did; for within two short years princely fortunes, honored names, and a business which had never been equaled in this or any other country, was wrecked, and its very name will soon be forgotten. Which business method do you most admire? The slow, but sure Quaker City way, or the brilliant pyrotechnical display made by our other friends?

Again, gentlemen, I thank you for the compliment you have paid me, and wish you each and every one a happy and prosperous New Year.

The last, but not by any means the least on the list was James H. Ritter, of the Biddle Hardware Co. His subject was "The Sweet Bye-and-Bye—What Shall the Harvest Be?" He said:

"IN THE SWEET BYE-AND-BYE—WHAT WILL THE HARVEST BE?" JAMES H. RITTER.

Mr. Chairman, Guests and Fellow Members: The man who said "doubtful things are mighty uncertain" probably had some experience as a prophet, and as I realize the truth of his saying, it is with some misgiving that I, who am neither a prophet nor the son of a prophet, now attempt to prophesy of the harvest "in the sweet bye-and-bye." Surely in these days of strange proposals, when free coinage, wildcat money, populistic ideas, anarchistic ravings, and Coxeyism, are all finding zealous advocates—when I begin to prophesy I run some danger of being classed among these undesirable folk who "rush in where angels fear to tread."

And yet there is good reason why I am asked to speak of the future, and not of the past. I think we are all more than willing to forget 1894—that is, if our profit and loss accounts will permit us to do so. It is the future which beckons to us with the finger of Hope—and we look eagerly forward to the harvests which are to be. But when I look on the talent and ability I now see around me, from the wisdom of a Nestor in our oldest member and the eloquent writings of our honored president, to the audacious wit of our secretary-treasurer, it is no wonder that I hesitate.

Still, who that is familiar with the history of our Association can doubt the promise of the future? In a certain sense this is our birthday dinner, for have we not just received from the city on the Susquehanna a solemn writing signed with red and imposing seals stating we are now a corporation? But the work of our Association, which is now nine years old, has already been more than manifest. Prior to our organization our jobbers had practically no acquaintance with each other, and each regarded his fellow jobbers with distrust, not to say actual enmity. Perhaps this early state of mind may best be told by a story which I heard last summer in Maine. A charming island in the noble Penobscot Bay is still peopled by the primitive settlers, who have lived there from the days when the French Baron Castine founded the town bearing his name. A man I knew, who had some business to transact on the island, was anxious to learn as much as possible about the character of a certain native whom everyone called "Deacon Jones." As far as could be learned, the deacon was an honest, hard-working man, who had won the respect and confidence of all his neighbors, except of one old crabbed character who lived nearby. To this neighbor went my inquirer and said: "Do you know Deacon Jones?" "Oh, yes," was the answer. "What do you know about him?" said the inquirer. "Know *all* about him," replied the neighbor in a most unpromising tone. "Well," was the next question, "do you know anything bad about him?" "No," said the neighbor, "don't say that I do, but you can't keep no sheep when the deacon is around." This was a dubious answer, but as a last resort the inquirer asked: "Does he pay his debts?" "Well," said the unfriendly neighbor, "he ought to; he takes up the collection in church every Sunday."

It was very much in such a spirit that our jobbers thought of each other, and so each was ready to believe the worst, and to competition was added the strife of personal feeling. Already we see the harvest of a more kindly and brotherly feeling, and personalities have not the same stress laid upon them as in former years. It is impossible to regard with the same continued distrust the man whom you meet socially and with whom you sit at the same social board. It is not only in the Arab's tent that bread and salt are a pledge of friendship, and I have been struck by the change made in a man's attitude toward a competitor simply by a social meeting. "The old order changeth, giveth place to new," and men begin to realize that common benefits accrue from co-operation and not from that false proverb which professional men are ever quoting "Competition is the life of trade."

If such has been the harvest of the past, surely we may look for larger returns in the "Sweet Bye-and-Bye." The coming years lie before us as fallow fields waiting to bring forth harvests according to our sowing. Will we sow wisely or unwisely?

One of the leading manufacturers of the country, a man of wide acquaintance, of knowledge of public life and of much travel, has said to me that taking all lines of business into consideration he thought hardware men represented as much general ability and breadth of thought as any set of men he knew, and added he, "They win the least reward." If this is so perhaps the fault is largely at our own doors, and it behooves us to sow wisely for future harvests. It sometimes seems to me that we hardware men are so pressed for time, so fully occupied by immediate questions of endless and innumerable small details, that instead of driving our business we are driven by it, and what we need is time and opportunity for calm thought how we can best guide our business to good results. It is a happy custom of one of the largest churches of Christendom to compel the preachers every year to devote a week to retirement and mutual conference, and I can imagine more wisdom in the conduct of our business did such a course obtain, and as such, as I take it, is the object of our new National Association.

But there are happier days in store for all of us. We are now, I trust, emerging from a depression which has tried men's souls, and we turn gladly toward the future and watch for the light which heralds the coming days of harvest. True, the great political economist who, on a steady and ample salary, lives in the White House at Washington, told us in one of his recent famous letters that prices should be lower. We however, hope for higher values and a fairer return to both employer and employee. Man is ever hopeful, and is not his hopefulness justified?

"Yet I doubt not thro' the ages one unceasing purpose runs,
And the thoughts of men are widen'd with the process of the suns!"

Digitized by Google

The ancient picture of the Golden Age is true except that the Golden Age is not behind us. It is in the future, already we may see some tinge of the coming brightness when truth and justice will prevail, when labor and brains shall meet their just reward, when co-operation will take the place of strife, and the lion and lamb will lie down together, and the lamb will not be inside the lion.

In the mysterious East, the land of dim age and drowsy antiquity, it is said they pour into the open palm of the prophet a strange and subtle dark liquid and looking steadily into this he sees the ghostly shadows of the coming years pass and repass, showing all that is to be. Here we use another liquid for much the same purpose, only it is lighter in color and is not poured into the palm, but tonight even this inspiration is absent.

Let us without it look down the vista of the years that are to precede a new century, and as we do so, we hear on all sides the same hope. "Ther's a good time comin'," sings the darkey in his happy confidence; the editors preach it from their papers, pulpits and clerical voices join in the chorus, the poet sings it in his hopeful vision, and even the long suffering hardwareman feels the same inspiration.

And so by faith we see the day when co-operation will be the rule, when the brotherhood of men as taught on Galilean hills will be a reality, when honest goods will bring their value, when hotels and railroads will no longer absorb all the profits of the jobber, when jobbers and retailers will realize their interests are in common and not in strife and competition. When industry and skill will bring their sure reward it will no longer be necessary to ask the question, "Are a young man's chances of success as good as twenty-five years ago?"

In these promised days the hardware man will be a better citizen of this City of Penn. No longer will he leave its business affairs to lawyers and those who make politics their profession, but he will once more assume the right which history shows he, as a merchant, possesses, and as the great Old World cities of London, Antwerp, Amsterdam and Florence were made great by ruling merchants, so will Philadelphia's merchants take their rightful place among the rulers of the city. When this is done I venture to predict some changes, and when an estimate is presented to councils containing such items as:

Carpets, $6 per yard
Tables, $25 per running foot
Chairs, $123 each

when such items are presented I see hardware ideas prevailing in the application of a discount of 60, 10, 5. In those days we will have a supply of water which is fit to drink, and what is more, we will have a reservoir which will hold it. Councilmen will receive a direct salary so that business men can afford to go to councils, and William Penn on his lofty tower will then not be ashamed to turn around and face his great and American city.

All this will have its effect on the individual life, and when the city is managed in the best interests of all its citizens our homes will be brighter, the advantages of life in Philadelphia greater than in less favored communities, and each will have a fair chance for the expansion of individual character and strength; while, instead of the present mad scramble for place and wealth, in which the weaker are trampled under foot, the battle of life will be fought by men moving shoulder to shoulder in mutual helpfulness. Then will Justice have her perfect reign over the hearts of men, and we will see realized the dream of the poet Lowell:

> "'Tis as easy then for the heart to be true
> As for grass to be green, or skies to be blue—
> 'Tis the natural way of living."

And now one more view and my prophecy is done. I look down and around this bright table, and as I look I seem to see the lights go out, one by one, the familiar faces in the chairs become more and more indistinct, and finally fade away, the fragrance of the flowers growing fainter and fainter until it is a mere memory, and the gay company is gone and is gathered into a more distant "Sweet Bye and Bye." Does anyone ask "What will the harvest be?" To the manly man, the honest merchant, the helpful citizen, the man who did his life's work nobly as he had the light, to him will come all the promises of the Golden Age and a harvest which will be none the less sweet because deferred.

Review of the Markets.

Money: Indications at present point to a continuance of the drain of gold from this country. The Treasury reserve amounts to about $70,000,000, but this sum will probably be steadily reduced by the presentation of legal tenders for redemption by houses which find it necessary to provide for their European drafts by shipping gold. There is an ample supply of funds in all branches of the market. The demand for mercantile paper is larger than the supply. Congress has done nothing in a legislative way to settle the vexing currency problem. Numerous propositions have been introduced. The proposed bill by Senator Sherman is the only one worthy of mention, and it does not meet the present needs. European investors are neglecting American securities in favor of South-American and South-African stocks.

Prices on Hardware are unsettled and the general tone of the market is not vigorous. A great many travelers have gone out in the interest of the houses they represent during the past week, but it is too early to hear from them as regards orders yet. There will, no doubt, be an increase of the volume of trade due to the exertions put forth by the traveling salesmen. Jobbers and retailers are completing their stock. These orders show that the stock carried is exceptionally light. The trade is making careful selections and show no inclination to speculate.

Barb Wire: There is nothing new in this line; the demand is still light. Quotations: Barb Wire, painted, $1.70; Galvanized, $1.95, carload lots.

Business is very quiet and there is no change in quotations. Shot: There is no change in the quotations for shot. The market is dull.

Nails: The nail market is quiet; there is, however, a slight increase in the volume of business. Cut Nail prices are about the same, carload lots at mill selling for 75 cents, 60-cent average. Carload lots at dock are quoted 85 to 90 cents; small lots at store, 90 to 95 cents. Wire Nails are quoted at 85 cents on carload lots at mill. Small lots from store at $1.15.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Copper.	
Lake, ingot... ℔	10½
Arizona & Baltimore Cast'g	10½

Do. 20x28	8½

Since our last issue quite a decided change for the better has been noted in the paint market. A neat business has been done in both domestic and foreign makes of Prussian blue, also in whiting for early spring trade. There is no special feature in White Lead, though in lead and oil for delivery in the early months of spring a fair trade is being done. Colors in oil are freer under the revised price list, which gives liberal discounts. White Lead shows signs of more life than it has for several weeks. In Red Lead there has been more inquiry for future delivery; prices range from 4½ to 4¾ cents. The bid to supply the New York Navy Yard with 50,000 pounds was awarded at 4.65c. for both kegs and pails.

In Litharge there has been a slight improvement in the distribution of this article among the various glass factories

Digitized by Google

throughout the country. The demand from the rubber trade continues slack. In Zinc during the past week there has been a better demand from grinders for deliveries upon their regular contracts. There is no falling off in the export demand, which keeps up unusually good. So far there has been no change made in prices, which range from 3¼c.@4¼c., as to quality and quantity for jobbing parcels. German is dull at 4½c.@4⅝c. In Barytes the market is quiet. Considerable business, however, is being done in the better grades at prices ranging from $14@$17 per ton, as to quantity and date of delivery. For No. 3 grade there is a fair call at $11@$12 per ton. In Putty the usual jobbing demand prevails for spot goods. There has, however, been a slight improvement in the demand for early spring delivery at a shade under current prices. We quote bulk at $1.45@$1.60 and bladders at $1.65@$2, as to quantity. In Window Glass the market is extremely quiet, but prices locally are maintained, although at other points a good deal of cutting is reported on American glass, particularly on carload lots. Here the discounts on American are 85 and 5@85 and 10 per cent. off the old list, and on imported 70@70 and 10 per cent. from the new list.

In Linseed Oil the market has been steady, but there has been no increase in the demand. Raw American seed, 56 cents; boiled American seed, 59 cents; Calcutta raw, 56 cents.

Clapp & Co., bankers and brokers, New York, in their regular financial letter, say: "Government credit is our sure defense against international financing. Dollars are only equal when each is convertible to any other. Retiring the greenback might renew liquidation, in which the stern law of survival would have no mercy, and our present co-operation be only a name. The United States Government cannot afford to lay foundations for refusing gold payments on any paper in use as money. There were 263 textile mills erected in 1894 against 279 in 1893; New York and Pennsylvania leading, the Carolinas following. The income tax of 1863 to 1873 averaged about 30 million per annum. Tax collections reached highest point in 1866, bringing $73,535,000. Estimates for 1895 generally exceed $40,000,000. The 1894 anthracite coal production was 41,266,833 tons, or only 2.6% less than average of two preceding years. Dun's reports indicate recent average prices of commodities were 4.96% lower than in 1886, 4.03% less than August 10, 1893, and only 68.73% of averages of 1860. Failures of 1894 involved $172,992,856 against $246,779,889 in 1893. The three preceding years the average was about $166,000,000. European banks gained 204 million dollars specie in 1894. Our specie exports in 1894 were $110,433,033; National debt increase was $86,452,038. The Government sold one hundred million of bonds for gold in 1894, increasing the interest account about three million per year."

THE PHILADELPHIA TRADE.

It is very gratifying to report that a better feeling seems to prevail generally, and now that salesmen have once more started on the road, they have done so with renewed hope and increased confidence, and their confidence seems to be justified by the number of orders coming in, which are more frequent in number, and, perhaps, somewhat more generous in size. The policy of hand-to-mouth buying, which has been pursued for the last eighteen months, has left stocks low, and if any business is to be done they must be replenished. It is very noticeable, in looking over the records of 1894, that the reductions in price were not caused by any action of the jobbers. For some years it has been the custom to put the blame of lower prices on jobbers, claiming that in their endeavors to buy at low prices they are continually exerting a pressure upon manufacturers which results in constantly lowering the price. This, however, was very little the case last year, and lower prices were made, they were almost always made voluntarily by manufacturers, owing to competition among themselves. Trade in some lines was so light that no manufacturer felt he was getting his share, and, consequently, was predisposed toward starting out to cut the price. It is natural to suppose that, with the first increase of orders, manufacturers will be only too glad to take advantage of the situation and advance their prices when a reaction may be expected from the unprecedented low prices which are now ruling. Since the first of the year there have been few important changes in prices, and these changes have usually been with a view to equalizing the conditions. Perhaps the most noticeable change has been that of double-pointed Tacks, which have again advanced. It will be remembered that a very decided advance was made in these goods some six months ago, and that this is the second advance. We learn that even higher prices still are likely. Wire Nails and Barbed Wire are still quoted at low figures, but how long these prices will prevail no one can say. Poultry Wire Netting is now in good demand, and orders for spring goods, Freezers, Rakes, Hoes, etc., are now coming in quite freely.

The Bicycle Show in New York city is attracting a great deal of attention, and the prospects point to a large gathering of dealers. It seems to be no longer disputed that Bicycles have become a legitimate part of the Hardware business.

Another event of this week is the annual dinner of our Philadelphia Hardware Jobbers' Association, which took place on the 23d, and which was as successful as its predecessors, and this is saying much.

THE BIDDLE HARDWARE CO.

THE BALTIMORE TRADE.

Have you a recollection of your first ride through a railway tunnel? Within the coach a dim light, a dull, rumbling noise as the train rushes through, phantom shadows fashioned from the smoke of the locomotive gliding past the car window, the damp, dark walls of the arched tunnel, the feeling of awe which clings to you; then ahead you notice a faint streak of light, a shrill whistle of the engine, and the tunnel is passed. The glad sunshine streams out before you, the grain-ladened fields smile back a welcome, and you breathe out a prayer of thanksgiving for the deliverance.

That same feeling of thankfulness for danger averted is impressed upon us to-day. Business during the year 1894 was neither more nor less than a passage through a dark tunnel. The few beams of light that strayed in only revealed the shadows of phantoms fashioned by those *wise genii* (?) at Washington, but so ghoulish were they in appearance, that even the bravest of us shrunk back from them in a fright.

Happily, the dark days have passed. We stand within the threshold of a new year. Other dangers may lurk ahead, but for the present we are passing through green fields (figuratively speaking) and are content with the glad sunshine and bright landscape.

During the opening days of the month trade was decidedly sluggish. Stock-taking, with its side development, had not created that jubilant feeling among the country merchants which guarantees a hearty reception to the traveling salesman. But as the days rolled on, the feeling of disappointment gave way to the actual demand, and orders are coming in freely and in fair quantities. Spring goods for the most part, though staples at the ruling low prices are finding ready purchasers. Prices are fairly firm, and manufacturers assure us that bottom has been reached. The same information from the same source was gratuitously given a year ago, but a comparison of to-day's prices with the market quotations of January, 1894, betrays a lamentable falling off in value. In such times it behooves us to make the best possible use of the present and leave to the prophet-clique the honor of foretelling coming events.

If the gathering of the mighty powers around the festive

Digitized by Google

board at Sherry's on the 31st inst. would get together in a spirit of harmony and make a general advance of about 40 per cent., it would do more to push things along than anything else.

The cold weather early in the month, besides practically exhausting the stock of skates in this market, has supplied the ice-houses with a fair harvest of that useful commodity. This in turn will very materially help along the sale of Freezers later on.

Bicycles are again receiving considerable attention. The cycle show now in progress in New York is attracting considerable notice from local dealers. As usual, we expect to wheel into line. Collections are fairly satisfactory, all things considered. Viewed in the light of present business and the daily increase in orders, both in number and quantity, we anticipate a fairly active spring trade.

THE TABB & JENKINS HARDWARE CO.

THE DAVENPORT TRADE.

There has been no further decline in barb wire or wire nails, and it may be that the bottom has been found on these goods. The fight, however, between manufacturers and jobbers of wire nails is still on, with no abatement of interest, and at this moment it is hard to foretell the result. The jobbers have an advantage in having other goods to sell, while the manufacturers may possibly add other and more profitable lines to help them out, if they should carry on the fight to a point below the cost of manufacturing. The effort to force inferior quality of barb wire on the market, by making ridiculously low prices, has not been successful here. The Sylvan Steel Co. hope to commence manufacturing barb wire and wire nails at an early date.

Rope is lower and price continues weak. Binder twine prices seem to have found a resting place, and orders are now being placed freely. The shot card has been reduced.

In addition to the new double track railroad and wagon bridge that will doubtless be built on the recommendation of General Flagler, Chief of Ordinance, United States Army, by the government in place of the old bridge now in use, of insufficient capacity for present traffic, which has increased so much since it was built some twenty years ago, there is an effort being made to build another railroad bridge, crossing a mile or two below. The charter for the new bridge was passed by Congress, December 19th, 1894. There will be an unusually large amount of building this season, which will include some elegant business blocks, flats, etc., etc. The Iowa Railway Commissioners have refused to advance rates in Iowa at the request of the railroad company, so the old rates remain in force. A large amount of ice is being harvested, giving work to many men who might at this time have been out of employment. General Hardware trade is fair; collections continue satisfactory.

SICKELS, PRESTON & NUTTING CO.

THE CHICAGO TRADE.

It is a little bit early in the year yet to offer very many guesses as to the outlook, as none of our traveling men have been out more than a week, and some of them only a few days, but the results shown by the orders coming in are of quite a satisfactory nature, and the reports from the men of the general feeling throughout the country seem to show that the trade are finding themselves obliged to make pretty general sorting up orders, if they calculate keeping in business at all. The hand-to-mouth method of buying has been in force so long that stocks are very generally broken up, and they simply must be replenished if the dealers expect to hold any trade.

Locally we were very much engaged during the second week of the month with the Bicycle Exhibition, and this brought into the city a very large number of Hardware dealers, and as most of them were here for several days there were a good many orders placed for goods outside of bicycle and kindred lines, and the general feeling, we are satisfied from opinions expressed, is of a decidedly more satisfactory character than we have heard of for many months past. The Bicycle Show was undoubtedly a great success in many ways, although it was a means of delaying the early placing of orders.

We are looking forward with a good deal of confidence to a fair business for the year 1895.

WOODROUGH & HANCHETT CO.

BAKING JAPANS AND LACQUERS A SPECIALTY

THE AUSTRALIAN TRADE.

There is no unanimity of opinion among distributors regarding the existing condition of trade. Those whose business is confined more largely to the supplying of summer requirements—the Antipodean summer corresponds with our winter—have been fairly active recently, particularly as regards country trade, and on this account are inclined to take a favorable view of future prospects. On the other hand, those whose trade lies outside such channels, adopt a more pessimistic tone, with more or less gloomy forebodings.

Collections have been fairly good, and, on the whole failures have been less frequent. The general concensus of opinion appears to be that a very slow though steady improvement is manifesting itself, but with no immediate prospects under present conditions of an active revival taking place in the near future.

The recent laying on of vessels from this port to Sydney and Melbourne by the Independent Line has precipitated a fight between them and the older lines, the latter being arrayed as a unit against the new-comers by reason of a sort of combination existing between them. This has resulted in a sharp reduction in the rates of freight, which incidentally will have the effect of depreciating the value of goods in stock in the Colonies that have borne the higher rates which have been ruling for some time past, and will thus, to some extent, demoralize the market. How long the present condition of affairs will obtain is problematical.

MCLEAN BROS. & RIGG, LTD,

STROPINE CO., 62 Purchase St., Boston, Mass.

New York Office, David Eastman, Manager, 64 Reade St.

Suit by the Griswold Co.

On December 17th last the Griswold Mfg. Co., of Erie, Pa., commenced suit in the United States Circuit Court at Minneapolis, Minn., against William Donaldson & Co., of that city, for infringing their patent No. 229,250, on the American Waffle Iron, by continuing to handle a waffle iron which the Supreme Court had declared was a direct infringement of the above mentioned patent. They were immediately granted a preliminary injunction against handling said iron in any way, and on the 9th of this month this injunction was continued against Donaldson & Co. from any further infringement of said letters patent on the American Waffle Iron, which patent the United States Court of Appeals has fully sustained. The Griswold Co., while they do not intend to bring suit against their friends in the trade, are desirous of protecting their rights against those who wilfully persist in disregarding said rights in this matter.

The firm of Edwin L. Haley & Co. have organized to conduct a manufacturers' agents' business at No. 185 Fort Hill Square, Boston, and will represent a number of prominent manufacturers, including the Phœnix Horse Shoe Co., of Poughkeepsie, N. Y., the Columbia Spring Co., the Leggett Axle Co., of Pittsburg, and others.

Otto Ditler has been appointed receiver for the American Champion Gas Lamp Co., New York, in proceedings for a dissolution of the corporation brought by Abraham Auerbach, Arnold Auerbach and Alexander Kaufman, directors.

A Great Bicycle Test.

The following important document carries its own explanation:

ORDNANCE DEPARTMENT, U. S. A.

Report of mechanical tests made with the United States Testing Machine, capacity 800,000 pounds, at Watertown Arsenal, Mass., January 16, 1895, for Premier Cycle Mfg. Co., New York, N. Y.:

TESTS BY COMPRESSION—BICYCLE FRAMES AND TUBING.

Test No.	Description.	Weight.	Ultimate Strength.
8,042	Weldless Frame.	5 lbs. 14¾ oz.	264 lbs.
8,041	Helical Frame	5 lbs. 5¾ oz.	448 lbs.

(Compressed lateral strain as in case of collision.)

Test No.	Description.	Weight per ft. ozs.	Thickness. Inches.	Exterior Diameter, Inches.	Ultimate Strength, Pounds.
8,049	Weldless Tube.	2.93	.038	.625	202
8,050	"	3.94	.043	.636	322
8,051	"	4.68	.030	1.000	704
8,052	"	4.06	.027	1.000	387
8,045	Helical Tube.	1.80	.015	.630	334
8,046	"	1.85	.016	.640	342
8,047	"	4.05	.026	1.000	848
8,048	"	3.28	.020	.980	487

(Transverse test—tube supported at ends 12 inches apart—loaded at the middle.)

No. of Test.	Description.	Weight per ft. ozs.	Thickness.	Diameter.	Ult strength, lbs.—Total Load.	Per sq in.
8,054	Weldless Tube.	4.03	.027	1.00	3,760	91,710
8,053	Helical Tube.	4.10	.027	1.01	5,540	131,900

(Compression tests—load applied parallel to axis of tubes.)

Correct, J. E HOWARD.

J. M. REILLY,
Major Ordnance Dept., U. S. A., Commanding.

Compare the following pairs of tests:

8,041 and 8,042; 8,045 and 8,049; 8,047 and 8,052; 8,053 and 8,054. Note that the results are enormously in favor of Helical Tubing *without a single exception*, ranging from 90 to 300 per cent., then decide whether you want a Helical or an ordinary tube bicycle this season.

WHAT'S IN A NAME!

Everything, when experience and reputation are behind it. So is it with a guarantee. Its value depends upon the reputation and standing of the guarantor. We guarantee our Rubber Belting in unqualified terms, and our guarantee is backed by experience and reputation. We hold this guarantee before the world, because our belting is made of first-class materials, our machinery is specially designed for the purpose, and our rigid system of inspection prevents goods that are defective, even in the slightest degree, from leaving our factory. "Warranted not to peel, open at seam nor separate between plies, and to be durable and serviceable." What's in a name? This:—

HARDWARE DEALERS SHOULD HANDLE

HELICAL PREMIERS, 1895.

American-made throughout. All constructed of our famous Helical Tubing.
Up to date in every particular. Lightest and Strongest.

All One Price, $100.

Roadster

28-inch wheels; 9½-inch head; 25-inch diagonal; 43½-inch wheel base; swaged spokes; 24 and 32; wood rims; dust proof bearings; detachable sprockets; T saddle post; gear 64, 68 or 72 as desired; 18-inch handle bar, raised or dropped; tread, 5½ inches. Weight, 18 to 20 lbs. **$100.** Brake and guards fitted if desired.

Racer

26-inch wheels, other details as above, lightest tires and saddle. Weight, 16 lbs. **$100.**

☞ **It was on a Helical Premier Racer that Wheeler beat Zimmerman two straight races. VERB SAP!**

Ladies'

26-inch wheels, double, drop-frame of Helical Tube. Weight, complete with chain and wheel guards, brake and foot rests, 20 lbs. **$100.**

By the use of Helical Tubing we build a drop-frame that is as stiff and strong as a diamond. Ladies who wish to ride on equal terms with gentlemen, but who object to "bloomers" will do well to note this fact in choosing their 1895 mount.

Here's the Proof.

We claim that our Helical Tube is far stronger than weldless tube and hence more desirable for the frames of bicycles. Business claims, however, have not always been substantiated and as some of our competitors (all of whom are confined to the use of ordinary tubing) have made misstatements about Helical Tube, we have submitted to the highest recognized authority, the Government of the United States, bicycle frames and tubes constructed of Helical and the best grades of weldless for test. A copy of the official report will be found in our reading columns, page 55.

RETAIL TRADE RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Bowen, Ill.—A. Walty.
Hallowell, Me.—H. P. Getchell.
Orangeville, Ohio.—A. E. Hunt.
Tonganoxie, Kan.—Driesbach & Co.

Record of Changes.

Allegan, Mich. — Abell, Phillips & Co., Hardware, sold out to John F. Dryden, who will continue the business.

Alten, Kan.—Cox Bros., Hardware, etc., reported as having sold out to Wilson Black.

Argenta, Ark.—A. S. Jenkins, Hardware, reported as having been succeeded by Lamberson Hardware Co.

Brady Island, Neb.—M. H. Kraxberger, Hardware, reported sold out.

Chateaugay, N. Y.—B. C. Bort has sold his stock of Hardware to W. B. Ryan.

Dallas, Tex. — Robinson, Bird & Co., Hardware, stoves, etc., reported as having dissolved partnership.

Delhi, N. Y.—Wm. H. Patterson has become a partner in the Hardware store of M. D. Sears, the firm being now Sears & Patterson.

Earlville, N. Y.—F. C. Buell succeeds the firm of Buell & Farr in the Hardware business.

Edgewood, Iowa.—The firm of Densmore Bros. have dissolved partnership.

Edwardsville, Mo. — Wolf & Desmond, Hardware dealers, have dissolved partnership. A. P. Wolf will continue the business.

Findlay, Ohio.—John Price has purchased the Hardware business of George W. Ruhl & Sons.

Gobleville, Mich.—Richardson & Temon, Hardware, reported sold out to William S. Crosby.

Glendora, Cal.—Daly & Snavely, Hardware, reported as having sold out.

Hamilton, Tex.—H. F. & J. D. Taylor, Hardware, succeeded by W. F. Taylor & Sons.

Holdrege, Neb.—With the object of increasing the business and putting in additional lines of goods, Max Uhlig has associated with himself in the Hardware trade in this city Francis C. Grable and M. L. Parrott, of Omaha, and Peter Peerson, Robert Uhlig and Morten Johnson, of this city, and the new firm will hereafter be known as the Max Uhlig Hardware Co., with Max Uhlig, president; Peter Peerson, treasurer, and Robert Uhlig, secretary.

Ionia, Iowa.—Van Tassel & Co., Hardware, succeeded by Troutner & Fallgater.

Jonesville, Mich.—Gilbert & Hix, Hardware, succeeded by the Hix Hardware Co.

Kokomo, Ind.—Armstrong & Son, Hardware, succeeded by Armstrong, Simmons & Ellis.

Littleton, N. H.—Frank L. Dunlap has purchased the Hardware business of Smith & Burnham and will take possession about February 1st.

Marion, Kan.—B. W. Carter, Hardware, succeeded by Evans & Co. W. H. Evans will take personal charge of the business.

Mercer, Pa.—J. C. Logan, who has been in the Hardware business for eighteen years, has decided to retire.

Minneapolis, Kan. — F. M. Spaulding, Hardware, etc., reported sold out.

Morrill, Kan. — McMillan, Ingham & Sprague, Hardware, etc., succeeded by McMillan & Ingham.

Moundsville, W. Va.—The firm of Courtwright & Smith has been dissolved. Mr. Courtwright has purchased the entire Hardware business, and Mr. Smith will take the roofing department and add it to his store on Seventh Street. The firm will then be W. W. Smith & Son.

Port Chester, N. Y.—The firm of Davis & Badger, Hardware, paint, etc., North Main Street, have dissolved. The business will be conducted by Mr. Davis.

Rochester, N. Y.—The firm of J. C. Meyers & Co., dealers in Hardware and agricultural tools and implements at Lyons will be dissolved by mutual consent on March 1st, Joseph C. Meyers, the senior partner, retiring.

Salem, Mass.—The partnership existing between John S. Morrison and James S. Murphy under the firm and style name of the "Salem Hardware Co.," has been dissolved by mutual consent.

Shamokin, Pa.— Peter E. Buck, Hardware, announces important change in his business, associating with himself as partner in the general Hardware and iron business, his sons, Frank L., Harry J. and William G. Buck.

West Randolph, Vt.—Whitten & Temple are to dissolve partnership in their Hardware business as soon as the business can be settled. One of the partners is to continue business at the old stand, but which one has not been settled.

West Side, Pa.—John S. Llewellyn has purchased the Hardware and tinning store of his brother George, and will hereafter conduct the same at the old stand on Luzerne Avenue.

Record of Improvements.

Americus, Kan.—E. B. Lesh is building another addition to his Hardware store.

Danville, Pa.—Essex Bros. will move their stock of Hardware into the new Gregg-Platt-McFerren building in a few days.

Edwardsville, Pa. — Harry Coplan, the Hardware merchant, has commenced to lay the foundation for his new store.

Elwood, Ind.—J. A. Hunter will move into his new Hardware store in the Harting building in a few days.

Jordan, N. Y.—C. Cole & Co. will soon begin the removal of their Hardware stock from the old store over to the new Call block.

Metamora, Ohio.—Seeley & Hallett, Hardware dealers, whose store was recently damaged by fire, have the foundation up for a new building with a front of forty-six feet, and two stories high.

Narrowsburg, Pa.—J. S. Anderson, Hardware dealer, has begun moving into his new brick store.

Wichita, Kan.—The Van Zandt Hardware Co., of Hutchinson, have rented the rooms on North Main Street at present occupied by the Rich Mercantile Co., and will move into their new quarters in a short time.

Business Embarrassments.

Brenham, Tex.—H. Franke, Hardware merchant, has made a general assignment. C. Minkwitz, Sr., is assignee. Total liabilities, $7702. No statement of assets.

Columbus, Ga.—J. R. Dooner & Co., carriage and Hardware dealers, closed by sheriff by virtue of a mortgage note for $3000 in favor of the Fourth National Bank.

Harrodsburg, Ky.—G. C. Bottoms, Hardware, assigned.

Memphis, Tenn. — F. Ozanne Stove & Hardware Co., No. 229 Main Street, assigned. L. Solari, receiver.

Minneapolis, Minn.—Smith-Anderson Co., Hardware, reported assigned.

Springfield, Ohio. — The firm of W. S. Putnam & Co., Hardware merchants, have assigned. Liabilities, $10,000; assets, $8000.

Stanton, Iowa.— The Hardware firm of Burke, Anderson & Co. have assigned.

Burglaries in Hardware Stores.

Algonquin, Ill.—John Helm, $150.
Arlington, Neb.—C. H. Linn & Co., $100.
Buffalo, N. Y.—Adam Reid, cutlery.
Des Moines, Ia.—Lewis E. Bolton, cutlery.
Durand, Ill.—Frank Shiek, $350.
Humboldt, Iowa.—C. E. Ward, cutlery.
Mt. Pleasant, Pa.—L. C. Fox, $50.
Pittsburg, Tex.—Holman & Hall, cutlery
Plymouth, Wis.—H. C. Laack, $150.
St. Johnsville, N. Y.—Amos Klock, $200.
Westport, Mass. — Wm. H. Guyer, revolvers.

Fires in Hardware Stores.

Anamosa, Iowa.—Mrs. Prader, Hardware store, destroyed by fire, at a loss of $7500; insured for $3500.

Biddeford, Me.—McKinney & Hurd, Hardware store, destroyed by fire.

Cedarville, N. J.—C. S. Stevens, Hardware and stoves, reported damaged by fire to the extent of $2000; insured for $1690.

Evans City, Pa.—Lewis N. Burry, Hardware, destroyed by fire. Loss fully covered by insurance.

Evergreen, Ala.—James M. Sims, Hardware, damaged by fire.

Gallup, N. M.—D. Mayer & Co., Hardware, reported burnt out.

Itasca, Tex.—T. G. Causler & Co., Hardware, etc., reported loss by fire, $8000; insured for $4000.

Lowell, Mass.—Bartlett & Dorr, Hardware, destroyed by fire, at a loss of $30,000.

Minneapolis, Minn. — Fire slightly damaged the store of the Pierson Hardware Co.

Minto, N. D.—S. Cairncross, Hardware, reported loss by fire; insured for $3000.

Pipestone, Minn.—Fire has destroyed the Hardware store of H. A. Marsh.

Salamanca, N. Y.—The Hardware store of E. W. Sperry & Son has been destroyed by fire.

Tunkhannock, Pa.—The Hardware store of Paul Billings & Son has been slightly damaged by fire.

Union City, Pa.—Hays & Sons' Hardware store has been destroyed by fire.

IF THE DUPLICATE ORDERS

which we are daily receiving for **New Clippers** are any indication of business, there is little doubt but we shall be crowded to our utmost capacity to supply our trade again this season, notwithstanding our increased facilities. The Hardware trade are beginning to realize that it pays to place their orders

FOR OUR BICYCLES

with the maker direct, as he gets certain favors and advantages which are impossible from any other source. We try to please our trade. If **any responsible** dealer will send an order for any one of our wheels, we will agree to send it promptly, and if he does not believe it to be worth the price we ask, he may return it at our expense.

GRAND RAPIDS CYCLE CO.,

BICYCLE TRADE RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Stores, Etc.

Baltimore, Md.—The Millington Machine & Bicycle Co., incorporated by W. B. Corell, A. V. Canfield, Nelson W. Ward, James F. Millington and E. L. Ward, to deal in and manufacture bicycles and sewing machines. Capital stock, $25,000.

Belvidere, Ill.—The National Sewing Machine Co. will take up bicycles, their product for the coming season being between 10,000 and 12,000 wheels, of which about fifty per cent. have already been contracted for.

Boston, Mass.—The Eagle Bicycle Mfg. Co., of Torrington, Conn., have opened branch salesroom and warehouse at No. 7 Portland Street, with C. P. Cubberly.

Bridgeport, Conn.—C. F. Seeley, of Stanford, bicycles, will open new salesroom. Correspondence invited with manufacturers of bicycles and bicycle sundries looking to accepting agency.

Bridgeport, Conn.—The Howland-Gow-Stark Co. will sell bicycles, and have taken the agency for the Columbia.

Chattanooga, Tenn.—H. Clay Evans has recently opened a new bicycle store. Mr. Evans is the son of the governor-elect of Tennessee, and is a graduate of Yale.

Coldwater, Mich.—The Perfect Bicycle Lock Co., T. A. Hilton, president; A. S. Roe, secretary, and Roll Hayden, treasurer, are about to commence manufacturing. Their plant has been purchased, and orders have been booked for future business.

Macy, Ind.—A. P. Cleland, Hardware, has added a bicycle repairing shop, and will handle bicycles.

Meridian, Miss.—H. H. Fecher, sporting goods, commenced business, and invites correspondence with the manufacturers of bicycles and bicycle sundries.

Milwaukee, Wis.—Julius Andrae & Sons Co., bicycles, etc., incorporated.

New Berne, N. C.—The Slover Hardware Co., incorporated by Geo. Slover, L. H. Cutler and J. C. Watkins, with a capital stock of $80,000. Correspondence invited with manufacturers of bicycles and bicycle sundries, looking to accepting agency.

New Haven, Conn.—Arthur Griggs, formerly with N. T. Bushnell & Co., Hardware, will open a new bicycle store.

New York, N. Y.—The Bidwell, Tinkham Cycle Co., Ernest F. Walton, formerly general manager of the Wicks Refrigerator Co., elected vice-president and general manager. Shortly after New Year the company will open branch stores in Brooklyn, Newport, R. I., and also a down town store in New York.

New York, N. Y.—The Eagle Bicycle Mfg. Co., of Torrington, Conn., have opened branch store at No. 28 Chambers Street.

New York, N. Y.—William Easton will open new bicycle store and riding school, corner Sixtieth Street and the Boulevard.

Paducah, Ky.—George O. Hart & Son, Hardware; incorporated by George O. and George T. Hart, and Harry Hank. Capital stock, $50,000; will add bicycles during the year. Correspondence invited with manufacturers of bicycles.

Paducah, Ky.—The Scott Hardware Co. are preparing to add a bicycle department.

Philadelphia, Pa.—The American Sewing Machine Co. announce their intention to commence the manufacture of bicycles during the present year.

Philadelphia, Pa. — Frank Dampman opened new bicycle store at No. 1227 Market Street, and will make a leader of the Falcon wheel. His former store, at No. 262 North Broad Street, will be continued as a branch, under the management of P. K. Manning.

Pittsfield, Mass.—The City Cycle Co. have leased quarters in the England Block, where storeroom, repair shop, etc., will be opened.

Springfield, Mass.—S. A. Grant is reported to be organizing a company, with a capital stock of $100,000, for the location of a plant at Thompsonville, to manufacture wooden frame bicycles.

St. Joseph, Mo.—Robinson Hardware Co., incorporated by James H. Robinson, Samuel H. Justice and Frederick Priche. Capital stock, $60,000. Correspondence invited with manufacturers of bicycles looking to inaugurating a cycling department.

Syracuse, N. Y.—The Cortland Wagon Co. will commence handling bicycles during the coming season. E. B. Richardson will have charge of the new department.

Williamsport, Pa.—The Tivy Cycle Co., A. A. Artley, manager, opened business at Nos. 309-311 Walnut Street. A standard high grade wheel will be manufactured. Only a small number of workmen will be employed at present, but the force will be increased as the season advances.

Changes and Removals.

Battle Creek, Mich.—The Meteor Bicycle Co., removed to Saginaw, Mich., have incorporated, with a cash capital of $15,000. The officers of the company are: Peter Harig, president and general manager; John McLean, vice-president; James M. Reed, secretary and assistant manager, and John L. Jackson, treasurer. The officers and E. H. Hussey constitute the board of directors.

Chicago, Ill.—Roger B. McMullen & Co., bicycle supplies, have removed from No. 64 Ohio Street to No. 139 Lake Street. Edwin Oliver has retired from the firm, and H. J. Cassady is now associated with that house in charge of the Chicago office.

Corning, N. Y.—C. S. Griswold, bicycles, sold out to H. G. Reynolds. Mr. Griswold will go on the road for the Rochester Cycle Co.

Cortland, N. Y.—The Hitchcock Mfg. Co. are preparing to commence the manufacture of a motor bicycle in connection with an extensive carriage and cutter business. The company's works are to be enlarged to make room for the manufacture of bicycles.

Louisville, Ky.—R. C. Thayne, manufacturer of the Southern bicycle, is about to be succeeded by an incorporated company, bearing the name of "The Thayne Manufacturing Company."

Norwalk, Conn.—Seeley C. Ford, bicycles, sold out to A. P. Sherwood.

Peoria, Ill.—The East Side Cycle Works, of Buffalo, N. Y., will remove their plant to Peoria. It has a contract with Rouse, Hazard & Co. for the entire output, including a 28-pound wheel which will be offered to the trade at $65.

Syracuse, N. Y.—The Syracuse Cycle Co. have moved into a new factory building.

New Goods and Improvements.

Coldwater, Mich.—The Perfect Bicycle Lock Co. are putting on the market an improved bicycle lock.

Everett, Mass.—The McCune Cycle Co. are erecting new factory to be 128 x 38 feet, two stories high, and to cost $5000.

Hagerstown, Md.—The Crawford Bicycle Co. have recently added a lot of additional machinery to their bicycle factory.

Philadelphia, Pa.—Jacob Rech & Sons, bicycles, etc., corner Girard Avenue and Eighth Street, have completed extensive alterations to their salesrooms, providing them with three large show windows, and making the place one of the best equipped cycling stores in Philadelphia.

Pittsfield, Mass.—Barker & Belden, bicycles, etc., are remodelling and rearranging their salesroom.

Richmond, Ind.—Percival Lankert is reported as organizing a company to manufacture an improved bicycle stand recently patented by him.

Toledo, Ohio.—The Snell Cycle Fittings Co. report business so favorable that their already large plant is to be considerably increased in capacity. A tract, 430 x 110 feet, adjoining their present plant, has been purchased, and the erection of two additional factory buildings has commenced.

Williamsport, Pa.—Demorest Mfg. Co. are putting on the market an improved bicycle support, and other new bicycle sundries.

Recent Fires.

Milwaukee, Wis.—On the evening of January 8th fire started in the store of the Friese Boat & Cycle Co., No. 410 Milwaukee Street. The firemen did good work and succeeded in extinguishing the flames in time to avoid the ignition of the concern's stock of loaded cartridges, powder and other explosives. The loss by fire and water will be about $1500. The origin is not definitely known.

Oswego, N. Y.—C. B. Rice & Co., manufacturers of bicycles, reported as having been damaged by fire.

Port Huron, Mich.—George E. Yocum, bicycles, etc., reported to have been damaged by fire.

Miscellaneous.

Louisville, Ky.—Harbison & Gathwright, contemplate doing a bicycle jobbing business in the Southern States during the present year.

Memphis, Tenn.—The Young Men's Business League are reported negotiating with bicycle manufacturers, looking to the establishment of a bicycle manufactory in Memphis.

UNION STEEL SCREW CO.

SOOTENE SERMON No. 1.

SOOTENE means "against soot." It is used to prevent the formation of clinkers in coal stoves, and to reduce the amount of soot and cinders. A small quantity of **SOOTENE** scattered on the coal as you are preparing the fire insures complete combustion.

It is valuable too, for use in a wood stove, and the amount of soot that accumulates in the pipe is nil.

It pays a good profit and will become a rapid seller wherever introduced, and this is an important point to remember.

PERSISTENT

Enterprising people are beginning to learn the value of advertising the year round. The persistency of those who are not intimidated by the cry of "dull times," but keep their names ever before the public, will surely place them on the right side in the end. Think over the persistent advertisers you know.

BERGER BROS.,

PHILADELPHIA.

Profitable to the Dealer, Indispensable to the Machinist and Engineer.

It is an absolutely pure, foliated, water-dressed and air-floated American graphite, from our own mines at Ticonderoga, N. Y. It has unrivaled smoothness and endurance. It is entirely inert and not affected by heat, cold, steam, acid, or any known chemical. It largely increases the lubricating value of oils and greases. It may be mixed in water, oil or grease, or used dry.

Jos. Dixon Crucible Co., Jersey City, N. J.

OUR STEER HEAD BRAND

of Butcher Knives are made of the **Best Double Shear Steel** obtainable. The greatest care is exercised in every branch of their manufacture and every knife severely tested before leaving our factory.

They are made in sizes from 6 to 14 in. and are especially designed for butchers or others who want the best knife made, who know a good knife when they use it and are willing to pay a fair price for a knife that suits them.

Dealers are authorized to sell these knives with the understanding that if after a **fair trial** purchaser is not satisfied it is the best knife made anywhere he shall bring it back and get his money.

Necessarily such a knife sells at a high price, but it is the cheapest in the end, and there is a good profit to dealer.

THE MILLER OIL HEATERS.

ust the Thing for All Time and Every Day Use. For Spring, Summer, Autumn and Winter.

..an Assured Success, from the fact that the Lamps are "The Miller Lamps" THE LATEST AND BEST.

..IESE HEATERS YOU HAVE A HAPPY COMBINATION: he Best Light. The Best Parlor Heater. The Best Cook Stove.

They are Clean and Odorless. Require no more care than an ordinary lamp. Cylinders of Russia Iron, with Removable Nickel Tops, or with Comb Pattern Heating Drum and Grate for Cooking. The No. 3 BURNERS have a FLAME OF 15 SOLID INCHES. "MILLER" HEATERS have outside SCREW ADJUSTMENT for regulating the Wick and PLUNGE MOVEMENT FOR EXTINGUISHING; each one is supplied with an extra Flame Spreader so that Lamp can be used for ILLUMINATING when not wanted as a Heater. All of the Best Material and Workmanship.

They will heat a large room perfectly. A tea kettle of water heated in a few minutes by removing canopy.

READY TO LIGHT, WITHOUT REMOVING CHIMNEY.

Perfectly Safe. They Cannot Explode. Oil Never Gets Hot in the "Miller" Heater. A Good Companion for a Cosy Nook. A Comfort on a Chilly Morning.

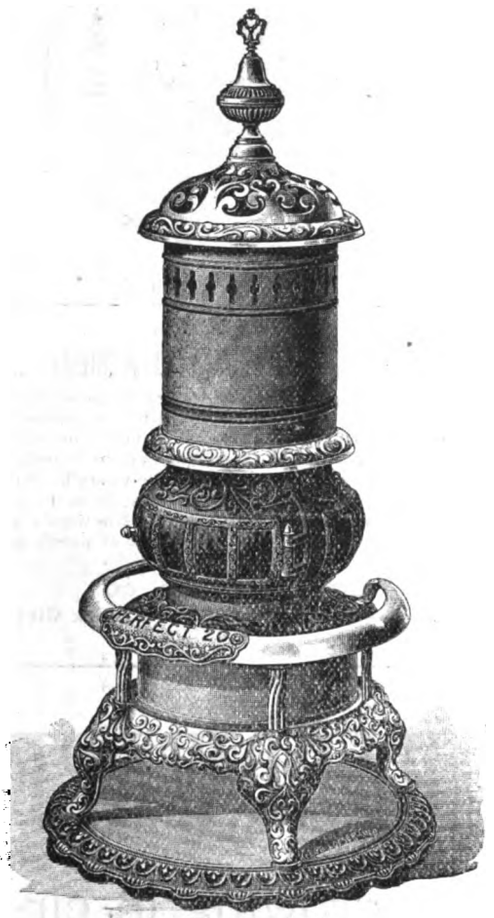
A MOST IMPORTANT FEATURE.

☞All the weight of the Cylinder rests solidly on the FOUNT and not on the BURNER in these Heaters.

In IMITATIONS of these Heaters the Cylinder is supported on the BURNER, a CHEAP and WEAK CONTRIVANCE, which makes it necessary to REMOVE THE CYLINDER for lighting and which renders it impossible or very dangerous to use the Heater for cooking purposes.

Send for circular showing Heaters with ovens for cooking. We have 12 varieties.

These Lamps hold One Gallon of Oil. Will Burn 12 hours. Easily Lighted by Lifting Top of Burner.



—MANUFACTURED BY—

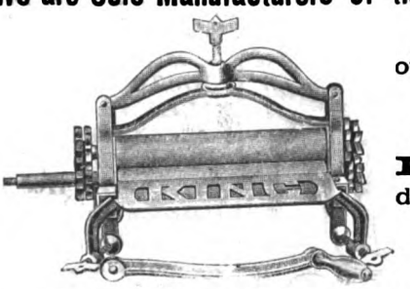
A

Mistaken Notion.

It is a mistaken notion that a fine store in an eligible location, surrounded by attractive signs, is a superior advertisement; for the experience of the most enterprising merchants is that it pays better to spend less in rent and more on advertising.



There is a Better Profit

To the dealer in this Wringer than in any other, and he can sell MORE OF THEM. Each one sold helps to sell more. Try it and see.

THE CHAMPION SIDE SASH LOCK

Has by its unequaled merits gained the public favor. It is a safe ventilator and prevents rattling. Is neat, cheap, simple and durable. It has been in extensive use for over eight years, and has become a staple article with the Hardware trade.

☞BEWARE OF WORTHLESS IMITATIONS.

The Champion Safety Lock Co., Cleveland, O.

PATENT PERFECTION PADLOCK.

Eight Tumblers. Key Turning Both Ways.

Size ¾ inch to 2½ inches, the larger sizes of cast bronze. Defies competition for quality and price. No steel or iron used, cannot rust, and cannot be picked. Also, ½ and ⅜ inch Padlocks, opened with a common pin, in brass and nickel, for cats and small dogs. The best Railroad Switch and Car Lock in the world. Adopted by the United States Treasury for bonded warehouses.

Hardwaremen's Exchange.

Notices of Help Wanted or Situations Wanted will be inserted in this column free of charge. Should not exceed Four Lines in length. Other notices, twenty-five cents per line.

Help Wanted.

WANTED—A man thoroughly posted in handling Builders' Hardware, reading specifications, taking quantities from plans, and familiar with its application to the work. Address, giving particulars as to age, experience and salary expected, Bordeaux, care HARDWARE, No. 143 Chambers Street, New York City.

WANTED—An experienced Builders' Hardware salesman. Must be capable of handling the trade through architects, etc. Address, giving age, experience and salary expected, Locks, care HARDWARE, No. 143 Chambers Street, New York City.

WANTED—Experienced salesman to represent staple line to the Hardware trade, upon commission in New York, Pennsylvania, West Virginia, etc. Address, "Business," care HARDWARE, 143 Chambers Street, New York City.

EXPERIENCED SALESMAN to travel and sell wire goods and solicit orders on iron work where necessary; state where last employed and salary expected. Address "Wire Goods," care HARDWARE, No. 143 Chambers Street, New York.

Situations Wanted.

SITUATION wanted as clerk in Hardware store, by a man who has had sixteen years' experience in a retail Hardware, stove and tin store as clerk and tinner. Am thirty-four years old. Can furnish good reference as to ability, honesty, etc. I desire a permanent situation; am willing to work; prefer position in a general Hardware, stove and tin store. Please state wages you can afford to pay. Address G. H. S., Box 332, Madison, Ohio, Lake County.

A COST clerk with several years' experience with Hardware manufacturing concern of national reputation, is open to an engagement. Understands book-keeping, correspondence, general office work, etc. Address Accuracy, care HARDWARE, 143 Chambers Street, New York City.

WANTED—By a young man twenty-six years of age, position in wholesale or retail Hardware store; experienced; best of references. Address W. A. F., 215 North Fifth Street, Brooklyn, N. Y.

PRACTICAL brass, iron and metal founder seeks position as foreman, superintendent, or otherwise. Thoroughly up on the economical production of castings and the handling of help. Good all around mechanic. Have superintended several Hardware manufacturing plants. Address N. Y. K., care HARDWARE, No. 143 Chambers Street, New York City.

SITUATION wanted as Hardware salesman; four and one-half years' experience in builders' Hardware, butchers' and grocers' supplies. Best of references. Address S. V. W., care HARDWARE, No. 143 Chambers Street, New York.

EXPERIENCED entry clerk and bookkeeper wants position with large concern where hard work and strict attention to business will ensure promotion and position. Has had four years' experience as a salesman in general Hardware. Address Hardworker, care HARDWARE, No. 143 Chambers Street, New York City.

POSITION wanted by an American. Age, 34. Bookkeeper, clerk or shipping clerk. Experienced in electrical supplies. Address G. F. M., care HARDWARE, No. 143 Chambers Street, New York.

SITUATION wanted as Die-maker. Experienced in cutting, forming and drawing work, plain or combination. Address D. M., care HARDWARE, 143 Chambers Street, New York City.

Agencies for Hardware Specialties Wanted.

TO Manufacturers: A well established and pushing firm of manufacturers' selling agents of San Francisco can handle one more line of staples. Concerns wishing their business with the Pacific Coast increased may be assured of thorough and competent representation on a perfectly safe commission basis. References exchanged Address "Pacific Coast," care HARDWARE, No. 143 Chambers Street, New York.

AN active reliable salesman, having a large acquaintance among jobbing and retail Hardware, housefurnishing and department stores in New York, Philadelphia and the South, desires a manufacturers' agency. Specialties preferred. A-1 references. Address, S. B., care HARDWARE, 143 Chambers Street, New York City.

A BUSINESS man and salesman of twenty-five years' experience, capable and reliable, desires a manufacturers' agency—either Hardware specialties, supplies for gas, steam, water and oil, or a line of housefurnishing goods for domestic and export trade. Highest reference given. Address Wallace, care HARDWARE, No. 143 Chambers Streets New York.

Side Lines Offered.

SALESMEN wanted to introduce our new novelty, a single article, light, and a free seller. Good commission paid. Address Moore & Co., No. 64 Reade Srteet, New York City.

WANTED—Traveling salesmen visiting stove and tinware, Hardware, house furnishing or plumbing and gas fitting trade, either retail or jobbing, will learn of something of interest by addressing B. J. W. & Co., Lock Box 47, Mercer, Pa.

A TRAVELING salesman who sells Hardware and can handle a side line upon a liberal commission, may find a profitable business by addressing "Side Line," care HARDWARE, No. 143 Chambers Street, New York.

WANTED—Traveling salesmen, to solicit the retail trade on a staple line of washing machines, of high grade. Liberal commissions to parties with good references. Horton Mfg. Co., Fort Wayne, Ind.

EXPERIENCED salesmen wanted to sell the best garden tool on the market. Sells to Hardware and implement houses; States, New York, Pennsylvania, New Jersey, Delaware, Maryland, Ohio; also for New England States. Address Lock Box 545, Rock Falls, Ill.

WE want traveling salesmen to carry as side line direct to retail trade, on commission basis, our line of Wire Hangers for garments. Commission liberal. Further particulars by addressing Barber-Koenig Mfg. Co., No 115 North Vine Street, Hazleton, Pa.

Business Opportunity.

WANTED—An active, energetic young man who can command from $5000 to $8000 capital to enter into a co-partnership with an old established company. He will be wanted to take care of the finances of the company, and attend to the office business. This is an unequaled chance, and to the right man will present an opportunity that will be very valuable. Address XX, care HARDWARE, No. 143 Chambers Street, New York City.

GOOD OPENING—A chance for a good worker. A young man with a capital of $3000 can obtain one-half interest in a well established Hardware business, in a growing section of Brooklyn. Address V. M. C., Blythebourne, N. Y.

For Sale.

A FOUR-HORSE Power Gas Engine, in good running order; now in use by us at our stores. Edward Darby & Sons, 233 Arch Street, Philadelphia, Pa.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded **ORANGE RIFLE EXTRA.**

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - 29 Murray Street, New York City.

Du Pont's Rifle.
For general shooting, either in muzzle or breech loaders.

"V. G. P." NEW TRAP POWDER. "V. G. P."
A new powder for Trap Shooters and others. Very regular in grain. Moist, quick, clean and strong.

Du Pont's Smokeless Powder.
Regular pattern and high velocity, with low pressure. Try it. Load same as Black Powder. Directions on every wrapper.

MILITARY POWDER AND ***GUN COTTON***
Of a quality to meet requirements of U. S. Army and Navy.

MINING AND BLASTING POWDER.

—Send Postal for Illustrated Catalogue.—

THE SCHULTZE SMOKELESS GUN POWDER CO. LTD.

OF

LONDON, ENGLAND,

BEG TO ANNOUNCE THAT THEY HAVE PLACED ON THE

American Market

Their First Shipment of

HARD GRAIN SMOKELESS SCHULTZE GUN POWDER

Which has been specially regulated in strength and moisture for the American climate

In the manufacture of their **Hard Grain** powder they have embodied all the advantages that their long experience together with the latest modern improvements in powder making has shown to be the very best.

HARD GRAIN SMOKELESS SCHULTZE POWDER retains all the good qualities which have made Smokeless Schultze Powder famous all over the world, while its **hard flinty grain** and specially regulated moisture makes loading so easy that any amateur can now do so successfully

Variations in pressure on wads, or atmospheric conditions do not affect the shooting and loads may be varied as much as with black powder.

Hard Grain Smokeless Schultze is the most modern, the best of all smokeless powders, and excels any other Nitro powder in velocity, penetration, cleanliness, regularity and closeness of pattern.

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

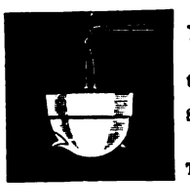
B. & W. SKATE SHARPENER.

—BEST SELLING IN THE MARKET.—

Handy to carry, does the best work, is made of malleable iron, full nickeled; the handsomest article of the kind on the market.



By its use the dullest pair of skates can be sharpened in five minutes, by any child old enough to skate.

In use, the side of the Sharpener forms a right angle with the file, making it practically impossible to file anything but a true plane on the skate, or to round the edges. As the file wears, it can be moved its full length on four sides, thus giving a great amount of filing surface. Put up one dozen in a box. Write for price.

BUTTERFIELD & CO., Derby Line, Vt.
Manufacturers of all kinds of
Taps and Dies and Kindred Tools.

"HERE THEY ARE" BRIDGEPORT CYCLOMETERS.
Three Styles for 1895, Models "A," "B" and "C," at Reduced Prices.
Guaranteed to be Accurate, Noiseless and Waterproof.

MODEL "A" Registers 1000 miles accurately and repeats, or can be set back to zero at will. Nickel finish with celluloid dial. The figures on dial have been enlarged so that same can be read from saddle with ease. The bracket and dog have also been improved. Made for 28 and 30 inch wheels; weight, 6 ounces.

MODEL "B" has a bell attachment which rings at every mile; otherwise the same as MODEL "A." Indispensable to riders who desire to see how fast they can ride per mile. For 28 and 30 inch wheels; weight, 7 ounces.

MODEL "C" registers 10,000 miles accurately and repeats. Recommended especially to wheelmen who take long trips or enter for club mileage records; also to those who do not care to set the cyclometer back to zero. Cannot be set back to zero but repeats at the end of 10,000 miles. For 28 and 30 in. wheels; weight, 6¼ ozs.

Discounts to the trade on application. Sold by all dealers. "Keep on the lookout for our new LAMP BRACKET and new BELL."

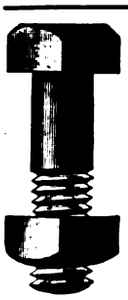
OHIO KNOCK-DOWN STOVE PIPE.

THE Ohio Stove Pipe is the only practicable, durable Smoke Proof Knock-Down Stove Pipe made that needs no directions for putting it together. The Ohio Stove Pipe's peculiar construction enables any person to easily put it together or take it apart. A number of the Ohio Stove Pipe Joints put together will make a continuous line (46 ft. long if desired) of perfectly firm, smoke-tight pipe that will not collapse.



The Ohio Stove Pipe is always shipped in crates of 25 joints of the following sizes:

4 in....per crate. 5 in....per crate. 6 in....per crate. 7 in....per crate.
4½ in.... " 5½ in.... " 6½ in ... "

Ask your jobber for this stove pipe; if he does not keep the Ohio, write us.

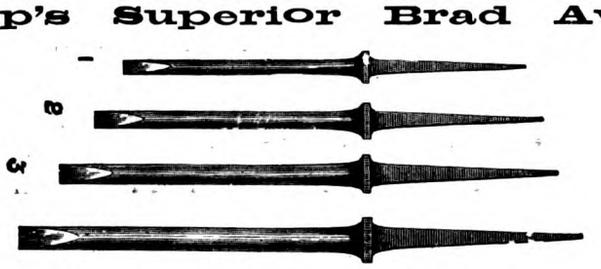
NEW YORK, 26 Park Place. BOSTON, 160 Congress St. PHILADELPHIA, Room 710, Betz Bldg. CHICAGO, 204 Masonic Temple.

Main Office and Factories, Meriden, Conn.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.



THE

AMERICAN WICK

Made by the WICK DEPARTMENT Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

A Perfect Shelf Bracket

—MADE OF—

WROUGHT STEEL.

Light! Strong! Elegant!

PATENTED

As a result of long and careful study and much experimenting we are able to offer the trade a

STEEL SHELF BRACKET

which is far superior to anything of the kind heretofore produced, and which we believe to be a

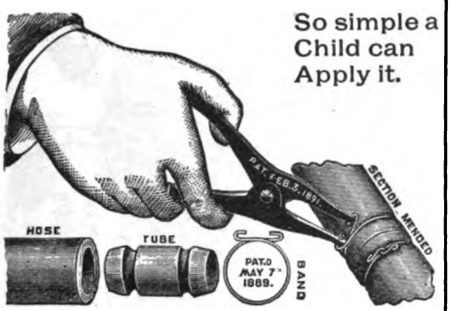
PERFECT ARTICLE!

We base our faith in these assertions on the following points of

SUPERIORITY:

1.—The use of the **arched** or **angle** forms of steel in the wall and shelf plates, which gives **much more strength** with less metal than if made flat.

2.—The **Corrugation** of the brace, which renders it secure against buckling or bending sideways under the severest strain.



The application of these principles makes a **Light, but very Strong Bracket.**

SOOTENE SERMON No. 2.

THE CHURCH CHICKEN.

We have all heard the story of the commotion that was caused by a chicken which wandered into church. In the scramble to put her out she flew up on the stove-pipe knocking it down and thereby depositing quarts and quarts of soot upon the maddened congregation. Now if the church spoken of had known of the merits of

SOOTENE

there would have been no soot to fill the pipe, and hence no ruined clothes.

It prevents clinkers. It reduces the amount of soot to the minimum. It saves fuel. It helps combustion and so saves coal. The sales are increasing, and the retailer who does not keep the article is neglecting his own best interests. It pays a good profit.

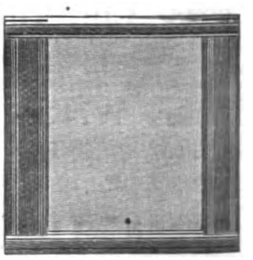
THE FILES THAT LEAD THEM ALL.

THE BEST EQUIPPED FILE WORKS IN THE WORLD.

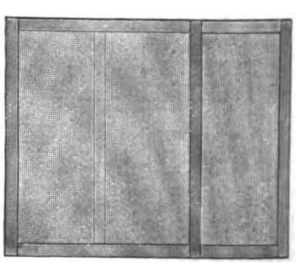
The fact that the Arcade File Works alone use the Improved File Machinery recently invented by Alfred Weed, and the even heat of natural gas enables them to produce files that cut faster and wear longer than any on the market.



PHILLIPS' AIR STRAINERS

THE FLYER.

Are Reliable!

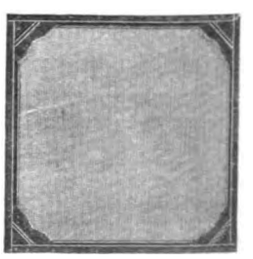


CLEAN CUT, HANDSOME SALABLE PATTERNS IN DOORS AND WINDOW SCREENS.

BONANZA.

Nice wholesome goods, well made from good materials.

Retailers of Phillips' Screens will be furnished with large cloth signs reading: "HEADQUARTERS FOR FLY SCREENS! Wire Stock, Spring Hinges, and Screw Hardware, etc."



EXTENSION.

If your jobber tells you something else is just as good as "THE PHILLIPS," ask him why he bought the "substitute." If he tells you the truth, he will say (in most cases): "Why, our folks could buy the other screen (which is just as good) for half a cent apiece cheaper." This brings out two more questions:

"Why did the other fellow offer his screen half a cent less than Phillips?" and "Does half a cent cut any figure unless you are *certain* the other goods are equally salable?"

The jobbers who handle Phillips' goods are those who make a specialty of handling first-class goods in other lines.

SCREEN FRAMES.

Write for picture and description of "New Northwest Window Screen Frames."

A device which every live Hardwareman should have in stock. Perfectly simple in construction and guaranteed to do the work so completely as to commend itself to every Housekeeper. Retail price 15 cents. Write for special price to the trade.

—MANUFACTURED BY—

Everett Specialty Co., Boston, Mass.

BOSTON RAISIN SEEDER.

THE ONLY PERFECT RAISIN SEEDER.

The objection to the Seeders upon the market has been, they either took too much of the pulp or did not seed the raisin thoroughly. In placing this Seeder on the market we have obviated these defects, and have produced one that is perfect in every respect and which, with a little practice, will seed a pound of raisins in ten minutes.

Retail price 25 cents. Special price to the trade.

Manufactured by

Geo. H. Mason & Co., 152 Blackstone St., Boston, Mass.

Truss Bottomed FLAX FIBER Pails

Overcome all objections. They **are not** clumsy, partially water-proofed, brittle; their bottoms do not warp out, nor swell and shrink and get loose. They **are** strong, elastic, thoroughly water-proofed, more capacious than other makes, and handsomely finished; while the **truss bottom** holds up its load, but is immovably affixed to the pail. Every man and woman who sees wants them. To introduce them we will ship a trial two dozen to any dealer on receipt of $5.00, or we will send to him **free**, express charges **unpaid**, a sample pail.

The Annual Hardware Dinner speaks for itself, in another portion of this issue. It was a success in every sense of the word, as have been those preceding it, since the memorable first dinner of 1892. The readers of HARDWARE, we are certain, will appreciate the full report of all the speeches, which we have felt it a pleasure as well as a duty, to lay before them.

There have been recently large sales of structural iron in Boston, giving a good tone to that market. It is said that there are some large structures in Boston about to be built, but names and details are, for obvious reasons, unattainable.

The manufacturers of glass seem inclined to start up their works, that at Sandwich, Mass., going into operation last month with much rejoicing by the long idle employee. German glass is selling at a price ten cents above the domestic make. This is said to be an anomaly, and the home manufacturer believes that the prices of his product ought to be more.

Some of the boat builders in New England have discarded the use of aluminum in the building of shells. At first the extreme lightness of this metal made it a favorite, but it has been found that it will corrode and the shell will then be full of pin holes. On the other hand, musical instrument makers are using aluminum in the manufacture of drums. Made of this material, they are not only of light weight, but give out a better tone than the ordinary article.

By some recent experiments it has been demonstrated that upon a level, hardwood floor, it takes three-fourths of the force to propel a steel rim bicycle of that with the pneumatic tire. This advantage, however, is not of a practical character, for if an obstruction be placed before the wheels, the pneumatic will pass over it with one-half of the power, and naturally up-hill riding is largely a factor with the inflated tire. The proportion of power naturally varies with the character of the obstructions, the ratio increasing with steep grades.

A Lesson Taught by the Bicycle Show.

There is one encouraging lesson taught by the grand display made last month by a single industry, at the Madison Square Garden, lasting, as it did, for eight days—a display so unequalled and so unexpected in its superb completeness that it filled the immense auditorium with interested and frequently excited spectators, during the entire time of its continuance, attracting daily from 5000 to 10,000 visitors. The lesson we are taught is, that we need never despair of the mechanical possibilities of the skilled artisans of this country, when backed by the "talking" dollars of the sanguine capitalists who are ever ready to endorse and sustain any meritorious enterprise of an industrial character. Here is a complete business, with its many important accessories as well, and applying only to one branch of trade in which sport and recreation was the original foundation—a business which five years ago the millions of dollars invested could be counted upon the fingers of one hand and then leave a surplus, but which to-day can show an expanded and enlightened development exhibiting an investment of over seventy millions of dollars!

Five years ago the skilled workmen capable of completely constructing the finished and perfect product of to-day, consisted of a few hundreds of not over-confident artisans, whose inventive faculties were only beginning to become awakened under the stimulus given by the generous public to this exhilarating medium of healthful sport. Nearly all of the mechanics who were the instructors in our cycle factories were recent importations from the more conventional factories of Europe, where a safety wheel weighing seventy pounds was an article considered worthy of admiration and profound regard. To-day, the ingenuity and inventive ability of our own native talent, which made possible the present perfect pneumatic tire, with its grand improvements, combined with light and graceful wood rims; with ball bearings on every frictional device, and mechanically bored drop forged connections without a possible flaw, has so resulted that a twenty-pound wheel which can be balanced upon the little finger of one hand is yet constructed so perfectly and admirably secure in all its parts, as to be capable of supporting a rider weighing two hundred pounds and over.

All this has so upraised our never satisfied inventive skill, so improved and extended the gracefulness of the

Digitized by Google

product, so enhanced the ardor which as Americans we invariably show in any development of our native genius, that to-day we undoubtedly lead the world in the intelligent manufacture of bicycles and likewise of everything pertaining to its profitable progression, and are asking no hostages from fortune in any particular. Those who have had the good fortune to visit the National Cycle Show above referred to during the week of its existence, and by the fruits of our industry have come to know how possible to the American mechanic all things seem evident, have witnessed the vigor of our brain power in the countless new devices, which increase the comfort and extend the life of this most perfect rival of the horse, and must have been impressed by the unbounded confidence in the promises of the future shown by our capitalists, who have been made to feel the importance of the profitable prosecution of this novel and enthusiastic industry of such recent development. Furthermore, they could not help but notice the courage and enthusiasm of everyone engaged in the distribution of the beautiful and artistic creations of our national skill and handicraft, and must surely feel a deep sense of gratification in the knowledge that although

"'Tis not in mortal to command success,"

by deserving it, we'll take our chances of reaping a harvest of dividends honestly earned by successful skill and an attendance of that commercial quality graphically denominated as "sand."

New England and the South.

The movement looking to the migration of certain industries in New England to Georgia and other Southern States, is looked upon with grave concern in the former and with evident satisfaction in the latter section. The reason assigned for this by the corporations who contemplate the transition, is that the raw material, coal, etc., are much cheaper South than with them, and that in these times when margins are cut so close, it is a matter of economical necessity to take the step contemplated.

It is, however, admitted that, for the present, it is only the inferior class of manufactured goods which can be made in the South. The class of labor that is found in the South is addicted to out-door life, and work is generally of the crudest sort. Occasionally a strain of white blood is found in the quadroon or octoroon and which enters largely into the make-up of an excellent mechanic, but such cases are very rare, and their citation as an illustration of the quality of the labor of the South, is mischievous in the extreme. The white is, by habit and heredity, little adapted to the confinement of the workshop, consequently is a factor upon which little can be depended.

The consequence is that for all high graded goods, labor must follow the transition. Our product in metal goods bears a high reputation at home and abroad, and to degrade that quality is simply to lose our markets.

Skilled labor moves, however, with reluctance. The good mechanic has generally been well seasoned by the hard knocks of the world, and is generally middle-aged. He has his home, his family, neighbors, good schools for his children, and, in fact, he is bound by bands of steel to well formed associations which almost forbid migration to any other section of the country. Hence the communities in New England need have little to fear with regard to the loss of skilled labor in their industries.

On the other hand, there is an expectation with a substantial foundation that as soon as the present muddled state of affairs passes away, we will become the workshop of the world. Our export business is in the hands of a few who seem to have two articles of faith :Language is used to conceal thoughts, and "silence is golden." Certainly they are not telling how the export of our manufactures is growing; but there are millionaires among them, and all have the appearance of being well fed and well groomed.

Association of Inventors and Manufacturers.

The regular meeting of the American Association of Inventors and Manufacturers was held in Washington City a few days ago. A large number of prominent inventors and others interested in the object of the Association were present, and much important business was transacted. Doctor Gatling, who has been the president of the Association ever since its organization, delivered an able address, and papers on pertinent topics were read and discussed. Among the papers read and discussed were the following; "Contributory Infringement," by Herbert Howson, New York City; "Forfeiture and Renewal of Applications for Patents," by Thomas Ewing, Jr., New York City; "Trade Marks," by Francis Forbes, New York City; "The History and Development of Inventions in Wool Manufactures," by S. N. D. North, Boston, Mass.

A delegation of members of the patent committee of the American Bar Association were present by invitation, and took part in the discussion of the various legal questions which came before the meeting. In all matters pertaining to patent legislation the two associations are working in harmony. In the election of officers for the ensuing year, the following were chosen: President, Dr. R. J. Gatling, Hartford, Conn.; first vice-president, Gardiner G. Hubbard, Washington, D. C.; second vice-president, J. C. Anderson, Chicago, Ill.; third vice-president, B. H. Warner, Washington, D. C.; fourth vice-president, Lemuel W. Serrell, New York, N. Y,; secretary and treasurer, Geo. C. Maynard, Washington, D. C. Members of Executive Council: Albert A. Pope, Boston, Mass.; R. S. Munger, Birmingham, Ala.; F. A. Pratt, Hartford, Conn.; E. A. Seely, Washington, D. C.: Arthur Steuart, Baltimore, Md.; Marvin C. Stone, Washington, D. C.; C. E. Billings, Hartford, Conn.; A. S. Bushnell, Springfield, Ohio; Robert S. Taylor, Fort Wayne, Ind.

The Joseph Dixon Crucible Co., Jersey City, N. J., claim to be "the people" who make a Bicycle Chain Lubricant "that is absolutely without an equal." There is no reason why they should not be "the people," for they have been in the graphite business over three score years, and have an experience in preparing lubricants second to none. Furthermore, the Dixon Co. have facilities which guarantee the purest and best graphite that can be offered, and it is the graphite which accomplishes the purpose. Dealers in wheels should write for sample and prices.

All sorts of bicycles are being rapidly and silently brought out. In one form there is an advantage applicable to certain localities. The steering wheel can be placed parallel to the rear wheel. This allows the bicycle to be shouldered in military operations, the crossing of rivers. etc. It is said to be the device of an English maker.

Charles H. Ayres, formerly manager of E. B. Ayres' estate, has opened a new Hardware store at No. 3316 North Fifth Street, Philadelphia.

The Late W. A. Gregg.

Mention has already been made of the death of William A. Gregg, secretary of the Beck & Gregg Hardware Co., Atlanta, Ga. In his departure from the scene of active life, the South loses one of its most active and earnest Hardware merchants. He was born in South Carolina, July 4, 1848. During his boyhood his father moved to Jasper, Ala. There he obtained his early schooling and received the greater part of his education. He next located in Memphis, Tenn., and from that place entered the Confederate army. Shortly after the war he went to Atlanta, and there, after searching about for work, secured employment with F. M. Richardson in the stove business. For quite a while he clerked in the store immediately adjoining the one in which L. H. Beck was a clerk. In this way the two boys became acquainted, and a mutual respect for each other's character soon developed into a firm friendship. In 1869 Mr. Gregg took the position of bookkeeper in the firm of Tommey & Stewart, formerly occupied by Mr. Beck. Nine years later he and Mr. Gregg purchased the interest of Mr. Stewart, and the style of the firm was changed to that of

W. A. GREGG.

Tommey, Beck & Gregg. In 1880 the firm changed again to Beck, Gregg & Co., and in 1883 it was incorporated as the Beck & Gregg Hardware Co. Mr. Gregg was made the secretary, and continued to hold that office until the time of his death. In 1877 Mr. Gregg was united in marriage to Miss Lizzie Jones, the eldest daughter of Oliver H. Jones. Seven children sprung from this union, the eldest, William Oliver, dying at a very early age. Six children survive—three boys and three girls. These, together with his sorrowing wife, and one brother, Joseph R. Gregg, the mayor of Ocala, Fla., are left to mourn the severe loss occasioned by his sad death. Mr. Gregg was a director in the Atlanta machine works and also in the Southern Banking Co. He was a member of the Board of Stewards of Trinity Methodist Church and a trustee of the orphan asylum of Decatur. His life was not so occupied with the cares of his business that he did not devote a large part of his time to religion and charity. He was a man of retired and gentle disposition, exceedingly popular with those who made his acquaintance and stood high in the business world for his general fairness and high integrity for character. He was highly esteemed by his business competitors and greatly beloved by the employees of his company. He took an active part in the Southern Hardware Jobbers Association and was one of their chief officials. Some idea of the high estimate in which he was held by his neighbors and business associates may be learned from the following resolutions, adopted at a memorial meeting held by the Hardwaremen of Atlanta:

Whereas, In the allwise dispensation of providence it has pleased our kind Heavenly Father to remove from our midst and call to higher duties and joys our friend and fellow dealer; and,

Whereas, Mr. W. A. Gregg was, in every sense of the word, one of nature's noblemen—a shining example of purity, strength and integrity of character, a man of good judgment and full of energy. Be it

Resolved, That we have lost an upright, just competitor, a warm personal friend, a model citizen and a noble countryman.

Resolved further, That we tender to the Beck & Gregg Hardware Co. our hearty sympathy and to his family our deepest sympathy, and trust that they may have strength to realize that they are in the hands of One who doth not willingly afflict and of the Lord God who is a sun and shield, the Lord who will give grace and glory and who will withhold no good thing from him that walketh uprightly.

Kirkpatrick Hardware Co., by J. C. Kirkpatrick, president.

King Hardware Co. Per W. E. Newell, secretary and treasurer.

Fitten, Thompson Hardware Co. Per A. P. Thompson, secretary and treasurer.

J. M. Alexander & Co.

Hightower & Kirkpatrick.

The Clarke Hardware Co. Per Thomas M. Clarke, president.

Lowry Hardware Co. Per G. P. Lowry, president.

The Beck & Gregg Hardware Co. request us upon their behalf, "to return their many thanks to the friends who have sent them letters and telegrams of sympathy. They have received such a mass of such letters and telegrams they have not found it practicable to answer each one."

Death of John Adt.

John Adt, senior member of the firm of John Adt & Son, manufacturers of Hardware and machinery, New Haven, Conn., and well known as a reformer and temperance man, died at his home, in that city, on January 24th. He had been ill with pneumonia for about ten days and gradually succumbed to the ravages of the disease. Mr. Adt was sixty-one years old. He was well known in that city, having lived there for many years. He was a great temperance advocate and was the prime mover in the action taken by the Chamber of Commerce when they decided to omit wine from the table at their annual banquets. Mr. Adt has also been connected with numerous other reform movements. His liberality won for him many friends. He contributed much to objects of charity. Mr. Adt leaves a wife and daughter. His nephew, Howard E. Adt, who is engaged in business with him, is councilman of his ward.

The Supplee Hardware Co., Philadelphia, Pa., have circulated a handsomely colored placard, entitled "The Planet, Jr," The four corners contain agricultural scenes, showing "the Planet, Jr.," used as horse hoe, cultivator, rake, plough and drill. In the centre is a representation of the world girdled by "Planet, Jrs."

The annual meeting of the Ohio Hardware Association will be held at Columbus, Ohio, February 13th, at the Neal House.

The Premier Cycle Mfg. Co.

On the 15th inst., Alfred du Cros, acting on behalf of the John Griffiths Cycle Corporation, paid to President L. H. Johnson, of the Premier Cycle Co., the sum of $15,000, and the attachments which have been standing against the Premier Cycle Co. and the Raleigh Cycle Co. were vacated and the keepers discharged. The Premier Cycle Co. will be wound up as rapidly as possible by Mr. du Cros. Mr. Johnson has organized a new American company, the Premier Cycle Mfg. Co., of which he is president; H. C. Douglas, treasurer, and W. P. Case, secretary. The offices, shipping rooms and shops will be located at Nos. 34, 36 and 38 Watts Street, New York. A line of feather-weight Helical Premiers is being rapidly turned out and was on exhibition at the New York Cycle Show. The new company have received the official report of a series of tests made at the Ordnance Department, United States Arsenal, Watertown, Mass., on Helical Tubing and weldless tubing and on bicycle frames of the same. The following figures will, in these days of lightest wheels, prove of interest:

Frames: Tests Nos. 8041 and 8042.

Helical, weight 5 lbs., 5¼ ozs. Ultimate strain, 448 lbs.
Weldless, " 5 " 14¼ " " " 264 "

Tube: Bending Transverse strains. Tests Nos. 8047 and 8052.

	Wt. per foot.	Thickness.	Diameter.	Ultimate strength.
Helical,	4.05	.026	1.	848 lbs.
Weldless,	4.06	.027	1.	387 "

Tube: Compression. Tests Nos. 8053 and 8054.

	Wt. per foot.	Thickness.	Diameter.	Ultimate strength.
Helical,	4.19	.027	1.01	131,900 lbs.
Weldless,	4.03	.027	1.00	91,710 "

Two New Style Store Ladders.

The accompanying engravings show two new styles of Store Ladders, offered the trade by the Bicycle Step Ladder Co., No. 50 State Street, Chicago, Ill., in addition to their regular well-known line of Bicycle ladders. The Chicago Ladder, Fig. 1, is offered as an improvement on other ladders of its class heretofore sold. The company claim to have avoided the faults of other makers, and have added valuable improvements, making a ladder as durable, safe

FIG. 1.

and easily operated as one of this kind can well be. It will readily be observed that a large wheel will carry the ladder smoother and with less friction than a small one, making it easier to operate, and with less liability of wearing and getting out of order. Not using a tubular track, the company are not restricted in the size of the wheels used to the little caster rollers, eight of which are usually found in the bearings of this class of ladders. They employ instead the same wheel and bearing as in their Bicycle ladders, which have been perfected so that they run as easily as a safety bicycle. By a simple device the ladder is prevented from tipping sidewise while standing on it, and is thus a safe ladder. It is also made to follow a straight line in moving along the shelving, making it unnecessary to climb down from the ladder when it is desired to move it

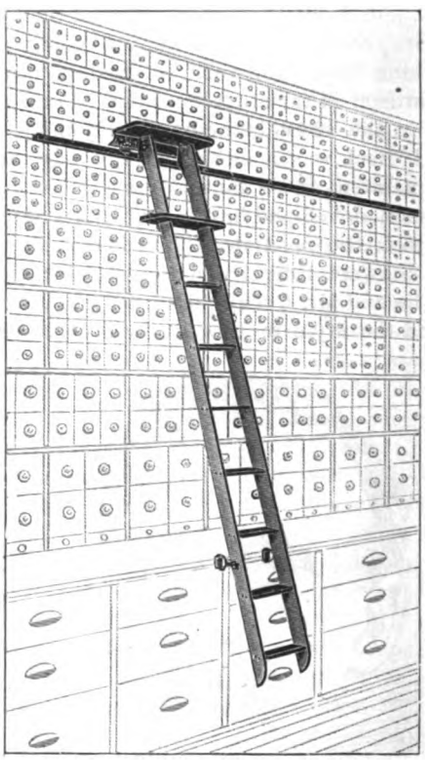

FIG. 2.

along the shelving more than a few feet. The track used is of steel and wood, attached to the ceiling with wrought iron hangers, nicely finished in bronze and black and presenting a handsome appearance. It is stated that this ladder cannot possibly get off the track.

To those who are looking for a rolling ladder service at a low cost, the "Iowa" ladder, Fig. 2, which rolls on an overhead track, will be found very desirable. It contains many improvements and is easily operated. Where the shelving is perfectly solid and secure, and well braced with uprights at frequent intervals, a hanging ladder of this kind can be used without trouble. The make and finish of the Iowa ladder is exactly the same as that of the Bicycle ladder, with the exception of the hangers. The track is made of wood and steel and is fastened with strong screws directly to the face of the shelving, the screws going through the track and well into the edge of the shelf opposite which it is placed. The wheels are the same as in the Bicycle ladder. This ladder is made in oak or hard pine, bent or straight, and with nickel or japanned mountings. Any further information desired regarding these new style store ladders will be gladly furnished by the manufacturers.

National Saw Co. Busy.

While many manufacturing concerns are complaining of the dullness of trade and lack of orders, the cheering report comes from the National Saw Co. that their entire plants in Newark, N. J., Cincinnati, O., and Middletown, N. Y., are working a full force of men, and are running on full time. Orders are coming in very satisfactorily, and all indications point to a good season's trade. The company promise the trade prompt shipment of orders from any of the following places: Newark, N. J., Cincinnati, O., and Middletown, N. Y.

Porter to Partnership.—VI.

To a country-bred young man the bustle and din of New York are very bewildering. The crying of porters and hackmen at the depot is a fit commencement of a city visit. Some of the hotel runners acted as if they were going to carry us to their hotels whether we wanted to or not.

"Where will you stop?" I asked my friend.

"At the Schmidt House; will you go to dat?"

"No, I am going to stop at the Astor."

"Ah de Ashtor! My gootness! Dat will cost you two tollars efery day."

"Well, the money comes out of Mr. Ely's pocket, you know, and he told me to go to the Astor."

"Den pusiness must pay like plazes to shtand dose brices; I will open a shtore in Yarmantown."

We came to the Astor House coach just then and I bade Fisher good-bye for awhile; he promising to come and call on me. When the coach put me down in front of the hotel, I doubt if a more uncomfortable youth existed in the city. I had never had much experience at hotels, and I dreaded doing something awkward that would advertise the fact I was fresh from the country. I entered the door and was met by a crowd of people, some coming out and others going in. A porter came up to me and took my valise while I followed him to the office. The clerk pushed a book towards me, and in as bold a hand as I could write I entered my name and residence.

"Do you want to go to your room now?" the clerk asked, and I said I did, adding that I expected to stay in the city a couple of weeks and wanted a room not too high up. He acted as if he did not hear me, but sounding a bell, gave the waiter who answered the summons my key and the order to "show this gentleman to 74."

I was glad to get where I could wash my face again and was well pleased with my room. From a notice on the door of "Dinner from 4 to 6," I found I was in good time for that meal and my appetite was in good trim for it too; such lunches as I had eaten along the route were only lunches, and I was ready to sit down to a good, "square meal." I noticed in going to my room that there were servants stationed in each hall, so I questioned one of them about the way to the dining-room, and was duly ushered into the presence of the head waiter.

I have seen a great many prominent men in my time, but there are only two classes who completely overpower me: head waiters at our large hotels and officers in the militia. This particular waiter was the beau ideal of self-complacency and importance. Giving me a majestic wave of a napkin in his hand to follow him he led me to a small table, and then, with a snap of his fingers, called upon a waiter to attend to me. It was my first attempt at wrestling with a bill of fare, and I was not at all easy with it; I knew what beef steak and roast beef were when I heard them mentioned, but I was not up to French, and though there were more things on the bill than I could possibly eat, they were Frenchified to such an extent that I did not know what to call for.

But I managed to make my wants known; when not sure of the proper way to call what I wanted I pointed it out on the bill to the waiter, and I had an excellent dinner, or as we would have called it at home—supper.

Going down to the office I began to feel as ff I were initiated in New York life, and I found my way to the reading-room, where I wrote home of my safe arrival.

The rest of the evening I spent in walking up and down Broadway, looking in the windows of the stores and watching the passers-by. It was all as wonderful to me as any of the stories in the "Arabian Nights," and I already pictured myself as a hero in relating these wonders when I got home.

Though I was very tired I did not sleep soundly that night. The perpetual rumbling of the 'busses, the walking in the halls, the strangeness of the bed and room all kept me from sleeping soundly, but for all that I was ready to begin business the next morning.

My first call was on a firm who were personal friends of Mr. Ely. I was struck with the air of quietness that pervaded the store; no one paid any attention to me as I proceeded through tables, upon which cloths were piled, towards the office. I saw several men in the room, but while they appeared to be busy, they were as quiet as if they were in church. Before I reached the office a young man met me with a nod of "good morning," but his face asking, "What do you want?"

"Is Mr. Gray in?" I asked.

"Yes; do you want to see him?"

"I do; I have a letter for him."

"Step this way."

I followed him to the door of what proved to be the private office of the head of the house, and I found myself in the presence of Mr. Gray. He looked up inquiringly as I entered, so I at once proceeded to business. "I am from ————. on business for Mr. Ely, and have brought you a letter from him."

"Please sit down," he said, at the same time taking the letter. After glancing over it he said: "Mr. Ely says you were never in New York before; if we can be of help to you in any way, I hope you will feel free to call upon us; I will speak to Mr. Fry, so that he will understand matters if I am not here."

He touched a bell and the young man who had shown me the office answered the summons.

"Mr. Fry, this is Mr. Rowland; he is here to buy goods for Mr. Ely, of ————. Please give him any assistance he may need in finding localities, etc."

When I was out with Mr. Fry he promptly put me through a course of questioning as to what I was going to buy; how long I was staying in town; where I was stopping, and what I was going to do evenings. He showed me where the principal houses were that we dealt with, and made himself very pleasant and useful.

"By the by," said he, as we were parting, "don't you want to go to the theatre to-night? I'll be at the hotel in the evening, and glad to go with you if you like."

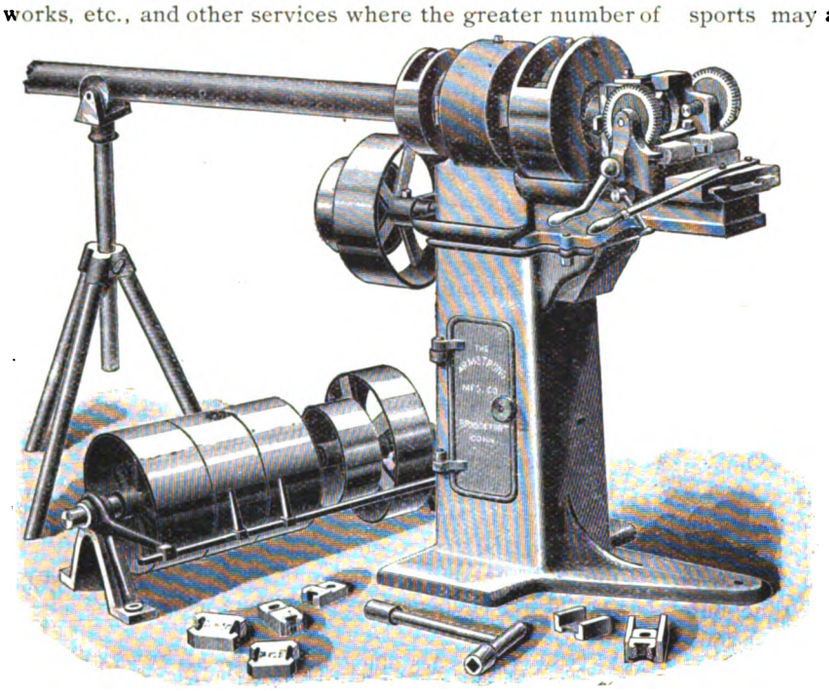
I thanked him, and said I would like to see the theatre. The world was suddenly opening before me.

The New York sales office of the Stewart Wire Co., Easton, Pa., has been discontinued. All communications should hereafter be addressed to the company at Easton. The company are in a position to make prompt shipments, and will give careful attention to orders intrusted to them.

The Arcade File Co., of Anderson, Ind., announce that they will erect a two-story brick addition to their already large plant, which has doubled its capacity within the past year. A full force is working full time and will be increased.

The Cattaraugus Cutlery Co., Little Valley, N. Y., have offered to sell their plant to a syndicate of citizens at the inventory value, and give twenty years' time on two-thirds of the price.

The Lawrence-Letts Elbow Co., Waverly, N. Y., will enlarge their plant by building a department especially for the manufacture of the stove pipe sizes and the storing of the elbows.



The sixty-fourth annual dinner of the employees of Logan, Gregg & Co., Pittsburg, Pa., took place January 3, at the Hotel Duquesne.

The Acme Aluminum Co. is the name of a new enterprise at Centrebrook, Conn.

Armstrong Pipe Threading and Cutting-Off Machine, No. 2 1-2.

Steam fitters and others having to do with the cutting and threading of pipe, will, it is said, "find in this machine one of the finest and most convenient tools built for their especial line of work. It is an improved form of the well-known No. 2 pipe threading and cutting-off machine for hand or power, built by the Armstrong Mfg. Co., Bridgeport, Conn., and retains the many attractive features of that machine in addition to others peculiarly its own. It is very compact, rigid and durable, and does not require the services of a skilled operator. All of the gears and working parts are enclosed in an oil tight chamber, which insures their perfect lubrication, and effectually keeps out dust, dirt and chips which might otherwise get to them and thus interfere with the perfect working of the machine. Ease of operation and long life to the vital parts of the machine naturally follow. In one particular this machine differs essentially from all other pipe cutting and threading machines of its class built by the Armstrong Co. In its operation the *pipe* revolves instead of the dies, being held securely by tight gripping chucks. For radiator steam coil works, etc., and other services where the greater number of

pipes are of comparatively short lengths, this will be found a particularly desirable arrangement. The dies and cutting-off tool are held stationary and are opened and closed by means of a double geared crank handle as shown. Expanding dies are used in connection with a self-centering and powerful gripping chuck, insuring speed in cutting off and thread a pipe. These are of the regular Armstrong pattern, widely and favorably known for the perfect thread their use insures, the small amount of power necessary and their great durability. They are furnished to thread from one to four inches inclusive. Quick interchangeability of the various sizes of dies, coupled with a construction which permits of separate adjustment for three different sizes, enables the operator to thread pipe to suit all variations in ordinary fittings, and to open and close the dies any number of times without changing the adjustment. Again either of the sizes may be used alternately without change of adjustment, or the dies may be quickly taken out to permit of the free passage of the pipe to be cut off, and the adjustment still remain unchanged. An objection frequently raised against machines using expanding dies, is, 'Our men are not skillful enough to use expanding dies without threading some of the pipe too large and some of it too small.' This has been met and successfully overcome in the tool here shown. Though the dies are quickly opened after threading a piece of pipe, yet they may be as quickly closed together again, without the least danger of variation, unless intentional. The weight of this machine is about 700 pounds; with countershaft, 850 pounds. Speed of countershaft should be about 225 revolutions a minute." The Armstrong Mfg. Co. report a wide adoption of the No. 2½ machine among water, steam and gas fitters generally. The headquarters of the company are located at Bridgeport, Conn., with New York offices and salesrooms at No. 139 Center Street.

Sportsmen's Exposition Association.

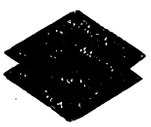
On January 15th, the Sportsmen's Exposition Association were granted a charter as a corporation by the Secretary of State. The following is a list of the trustees: Charles Tatham, F. S. Webster, P. G. Sanford, J. Von Lengerke, John S. Wise, Jacob H. Studer, Charles Daly, Archibald Rogers, J. A. H. Dressel.

The particular business of the corporation is the study of field sports; the holding of expositions promotive of field sports; the establishment of assembly rooms or headquarters in New York City, where those interested in field sports may assemble; and, incidentally, the founding of a sportsmen's library in such headquarters, for the use of members and visitors.

The principal office of the corporation is to be in New York City. The names of the incorporators are: Charles Daly, John S. Wise, J. A. H. Dressel, Jacob H. Studer, Frederic S. Webster.

The intention of the corporation is to acquire as large a membership as possible, and a vigorous effort will be made to enroll every sportsman as a member. This may seem a herculean task, and not possible of accomplishment, but the support of hundreds of sportsmen can be reasonably expected. The policy of the trustees will be all that could be desired. The interest in the forthcoming exposition of the Association is daily increasing. The spaces are more than half taken by the leading firms and associations. The first annual trades convention of the corporation will be held May 16, 1895, at 3 P.M., during the week of the exposition. Special arrangements will be made with all railroads in the United States for one and one-third fare rates to all persons attending the convention.

A New Corporation.



The old and reliable firm of John Chatillon & Sons, manufacturers of scales, butchers' tools and machinery, Nos. 85–93 Cliff Street, New York, established in 1835, have been incorporated, under the same name, with a capital of $200,000. The directors of the company are George H. Chatillon, Edward C. Schaefer, of New York city, and Louis A. Tranberg, of Brooklyn.

"Special stocks made to order, $4 and upward," is the announcement of an east side gun shop. Special stocks are made to please the finical tastes of German shooters, high connoisseurs in all that pertains to the rifle. A gun shop in the German quarter must be up to date in all things, and must not attempt extortion, because the hundred and one shooting societies of that region include a great number of experts.—*New York Sun.*

The Bethlehem Iron Co.'s armor expert, Lieut. J. F. Meigs, is back from Russia, bringing with him an order from the Russian Government for 1500 tons of non-harveyized armor plate.

A Superior Line of Garden Hose.

An important branch of the large business carried on by the New York Belting & Packing Co., Ltd., at No. 15 Park Row, New York City, in vulcanized rubber goods, is the manufacture of Garden Hose. The goods offered in this department for the ensuing year are especially attractive, both in quality and workmanship, and worthy of careful inspection by dealers desirous of handling a superior line. All this company's hose is machine-made, and has seamless tubes, insuring evenness and uniformity in construction, compactness and extreme durability. For lawn and hydrant use there are several grades. "Of rubber lawn hose, the brand '1846 Para' rightly stands at the head, being recognized as the very best rubber hose for the purpose, in the market. It has been manufactured for nearly fifty years, and is made with great care from the finest quality of Para rubber and cotton duck. Next is the 'Double Diamond,' a strong and durable hose, warranted by the makers to give entire satisfaction.

It is constructed of excellent stock, and with the exception of '1846 Para,' there is nothing better in the market." The "Carbon" and "Spider" brands are the cheaper grades, and very popular as such. They are made in a superior manner and give very satisfactory service.

In cotton lawn hose, the "Double Diamond" is deserving of special notice. Only the best long staple cotton, heavily and closely woven, is used in the manufacture of this brand, which is capable of sustaining a hydraulic pressure of over 500 pounds to the square inch. A special feature is the seamless rubber tube, which, being perfectly smooth, prevents friction while water is passing through. Every section of this hose bears the name of the manufacturers on a rubber label. The cotton lawn hose possesses great strength and durability, and will stand the pressure of any water-works system. The fabric of this hose is woven in a superior manner. By a special treatment termed Leatherite, of which the New York Belting & Packing Co. are the patentees and sole owners, a positively rot-proof cotton hose is produced. This hose is similar to the "Double Diamond," though not so heavy, possessing all its attractive qualities and in addition being mildew-proof. A change of weave has been made in the covers since last year which adds greatly to its strength and durability.

For the purpose of resisting extra heavy pressure, the company are prepared to furnish all brands of its garden hose, wire wound or armored, when desired. Where hose is subjected to rough usage, as in greenhouses, livery stables, etc., the wire armor affords an efficient protection against abrasion and other injury. Brass goods, such as branch pipes, hose reels and sprinklers, may also be procured at the large warerooms of the New York Belting & Packing Co., which are conveniently located in the heart of the business district of the city, and are equipped with every essential for transacting business conveniently and expeditiously.

Knew What She Wanted.

She entered the Hardware store with the air of one who confers a favor on the earth by continuing to exist upon it. She was as portly as middle age and high living could make her, and as slender as French stays and a tailor-made gown could force her to be. She looked through the clerk with her lorgnette and then said:

"Have you alabaster plates and cooking utensils?"

"Alabaster?" faltered the clerk. "I don't think we have, madame."

"Surely you have," she retorted, wearily, as one who is very tired of having to teach people what they ought to know themselves. "All stores must keep them. They are quite common."

"We do not," replied the clerk, deferentially, "or at least we do not call them by that name."

"Probably not," said madame, contemptuously. "Then see if you recognize them under the name of fire-proof."

"Oh!" cried the clerk, a great light breaking in upon his brain. "You meant asbestos, not alabaster."

And for the next fifteen minutes the stout, imposing lady had a little less the air of conferring a favor upon the community by living.—*New York World.*

Will Be Right In It for 1895.

Rouse, Hazard & Co., Peoria, Ill., have forwarded us one of their 1895 catalogues and cuts illustrating part of their 1895 line. Their catalogue is neatly gotten up on heavy paper, and is printed in two colors throughout. It is far ahead of any catalogue ever before issued by this large and well-known house, which is now entering on the sixteenth year in this line, and which has a trade that extends to the four quarters of the globe. For many years they have

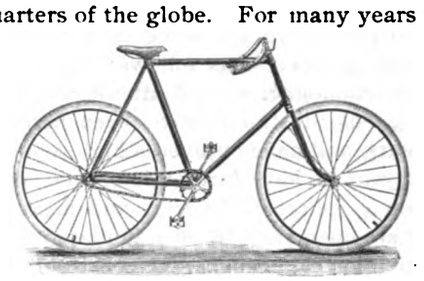


FIG. 1.—MODEL H SYLPH.

had many of their machines built to their own specifications by the best makers they could procure. They have now begun to manufacture their own wheels and will be better prepared to take care of their trade than ever before. Their line for 1895 will consist of thirteen models of Sylphs and Overlands, built on the very latest lines and up-to-date in every detail. They will manufacture five patterns of Sylphs, weighing 16, 19, 21 and 22 pounds, respectively, including racer and a ladies' model, weighing 22 pounds, with chain and dress guards. Price for all patterns of Sylphs, $100.

The Overland line embraces eight patterns or models in 24, 26 and 28-inch wheels, and prices $40, $50, $65 and $75, including both diamond and drop frames. All Overlands and Sylphs are built of Shelby steel tubing, and drop forgings are used throughout. All bearings are tool steel, even in the lower priced machines, while in the $75 and $100

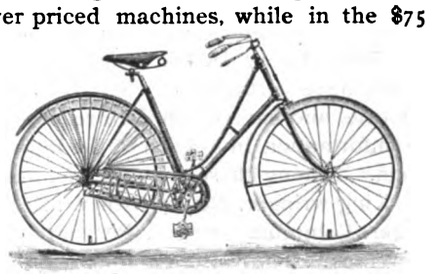

FIG. 2.—TWENTY-SIX INCH LADIES' OVERLAND, $50.00.

models the bearings are absolutely dust-proof, a feature indispensable for easy running. Besides the thirteen models mentioned above, a complete line of sundries will be carried, also a large and varying line of special bargain cycles. Exclusive territory and complete protection will be given agents, the same as last season. The catalogue illustrating and describing their complete line can be had for the asking.

McLean Bros. & Riggs' Melbourne house have recently taken over the business of Wood, Paton & Co., at Sydney, New South Wales, and Eyres, Black & Co., at Adelaide, South Australia, and in future such will be conducted under the name of McLean Bros. & Rigg, Ltd.

THE LATEST CATALOGUES.

North Brothers Mfg. Co., Philadelphia, have in their 1895 catalogue and price list of Hardware Specialties for Household Use presented a solid and attractive publication, filled with information of special and essential value to Hardware dealers. A glance through the pages shows thorough illustration and description of their various ice cream freezers, ice chippers, freezer clamps, ice shaves, meat cutters, scales, beaters, cake pans and batter mixers, candlesticks, fluting machines and hand fluters, wringers, tobacco cutters and shaves, faucets, Christmas tree holders, etc., ending up with their tables of weights and measurements of all goods. We have from time to time taken pleasure in illustrating these various specialties, and it is only necessary to say that they are made by the North Brothers Mfg. Co. to give them a standing for value and reliability of a high grade. The company call this their first complete catalogue, and in presenting the same they touch upon some special points of interest as follows: "In presenting this first complete catalogue, we call attention to the fact that the lines of goods illustrated have been favorably known for many years, and have enjoyed a high reputation. During the past year we have further improved and perfected several lines, as ice cream freezers and meat cutters, and to-day they are unequaled by any similar goods in the market, in perfection of design and construction, or in efficiency and convenience in practical use. It is our constant aim to maintain our lines of goods as pre-eminently the best of their kind, and to this end we confine ourselves almost exclusively to Hardware Specialties for Household Use, that our efforts may be concentrated on this one line, rather than distributed over a number of widely differing lines of goods. That our goods are the best of their kind to-day is amply testified to, in the fact that such leading instructors in tne art of cooking as Mrs. S. T. Rorer, Mrs. D. A. Lincoln, Mrs. C. M. Dearborn, Mrs. E. P. Ewing, Miss Amy Barnes, Miss Juliet Corson, Miss Anna Barrows, Miss A. W. Cramer, Miss Lucy C. Andrews and many others use our goods in their classrooms, lectures and demonstrations. Furthermore, the fact that leading jobbing houses handle our goods extensively, also demonstrates that our goods are popular and satisfactory among the trade."

The National Wringer Co., Canton, Ohio, have issued a catalogue, upon the title-page of which we find the words, "Wringers: What Every Dealer Ought to Know About Them." They have certainly carried out the suggestion made in this title, and have given their readers a great deal of valuable information in regard to the lines of wringers made by them. Among these may be mentioned the Erie wringer, the King wringer, No. 77 wringer, Zenith wringer, Prime wringer, Columbia wringer, Pittsburg wringer, and their wringer rack. They also manufacture the Daisy ratkiller, which is illustrated and described. Several pages are devoted to their price-list of wringers and rolls, while a great variety of testimonials of a very strong character are also published. Under the heading of "Is a Wringer a Necessity?" the company speak to their friends and patrons as follows: "Ninety-nine out of one hundred would unhesitatingly answer 'Yes.' If, then, a wringer be a necessity, how to buy wringers is necessary information. A few pointers on this subject may serve you. To start with, the rolls of a wringer is its most important feature and receive our special attention. The rubber is first rolled out into long thin sheets; the shafts are specially prepared; all grease and scale is removed. They then receive a coat of copper. The rubber sheets are then wound around the shaft until the desired thickness is obtained; they are then placed in a mould and are vulcanized. No twine or wire is used. All rolls are solid white rubber through to the shaft. The frame of a wringer is next in importance; and on all parts of the frame, wherever the most strain is concentrated, is specially strengthened. In all wringers manufactured by us the pressure on rolls is adjusted from the centre and an equal pressure is thus assured on all parts of the rolls. The National Wringer Co. are the largest manufacturers of iron frame wringers in the world, and special attention is directed to the Erie and King wringers. Whatever kind of wringers you decide to buy, whether it be an iron or wood frame, it behooves you for your own protection to be careful to buy only those wringers which have been made by the best and most reliable manufacturer."

Rouse, Hazard & Co., Peoria, Ill., are sending their "sixteenth annual greeting" in the shape of a handsomely illustrated catalogue of their Sylph and Overland Cycles. This is printed upon white paper, with type and illustrations in blue, with old gold margin, and is artistic and one of the handsomest issued this year from a bicycle house. The wheels and parts thereof are all thoroughly illustrated. The catalogue is accompanied by an inset, which is entitled "Extraordinary Reductions in 1893 Wheels," and contains an exceptionally attractive special bargain list. In a note of introduction and greeting to their friends the company have the following to say in regard to their present plans and prospects for the coming year: "It is with no little pride and satisfaction that we offer our Sylph and Overland cycles for 1895. As is well known, we are one of the pioneers in the bicycle trade in America, there being, we believe, but two firms older established in the business than ourselves. Although our line has always been one of the leaders and our agency a most valuable one, and our Sylphs and Overlands have been received with constantly increasing sales, we have never offered a line that we felt so sure would be received with universal favor as the one we catalogue herein. For this, our sixteenth year, our line has been made complete, and now comprises the only really *complete* line offered by any one maker in this country. Every machine in the line is the best in its respective grade and weight, and is offered by us with full confidence and backed by our warrant, which our tens of thousands of customers have found to be worth one hundred cents on the dollar. In the future, as in the thirty years since our business was established, it will be our constant endeavor to treat our customers with fairness and courtesy, and especially in the matter of our warrant we shall aim to treat every customer not only with justice but with liberality."

The Grand Rapids Cycle Co., Grand Rapids, Mich., have performed still another service to their friends in the bicycle line by the presentation of a handsome catalogue for 1895. Upon the cover we find a clipper ship in full sail on peaceful waters, which is an able representation of the condition of the Clipper bicycle trade for the year 1895. This company made a creditable representation at the two great bicycle shows of 1895, and impressed the fact upon the minds of the trade that the Clippers have come to stay and are holding their own in all parts of the country. In this catalogue we find a representation of the original Clipper factory, which consisted of a small wooden shed with an annual output of about three wheels, while in another part of the book may be found pictures of their already important factories at Grand Rapids. The wheels are thoroughly illustrated and described in detail, and printed in the catalogue may be found the following ample guarantee: "We will warrant all our Clippers for one entire riding season.

Digitized by Google

against defects in material and workmanship. We do not, however, agree to keep our bicycles in repair for one year or one day. We will be liberal and fair with our customers, but we do not wish to be imposed upon. A guarantee, protecting a wheel against rough usage or hard riding over rough roads would be valueless, inasmuch as we have never known of any that did not break down on 'a perfectly smooth road, while riding along very slowly.' Tires and saddles are guaranteed by their makers. Claims for defects in them should be made to the tire and saddle makers. Transportation charges on parts returned must be prepaid by the sender or they will not be accepted."

S. L. Allen & Co., Philadelphia, have issued for 1895 a very handsome catalogue of their well-known "Planet, Jr." line of goods. These articles which, as the company say, "encircle the globe," are too well-known to need detailed description. It is simply needed to say that all of these articles are fully described and illustrated in this catalogue, and that a copy thereof will be sent by the publishers with pleasure, upon application. In a special mention of their goods, the company say: "One of our advertisements last winter stated that 'Hard times do not affect the sale of Planet Jr. goods.' This claim was questioned by some parties in the trade, but the year's record has *justified* our prediction, and we take this opportunity of thanking our many friends for their generous support during 1894. We look for a gradual improvement in business during the year 1895, and can say positively that the 'Planet Jr.' goods will be better than any ever offered before. We would call especial attention to the improvement in our Combined and No. 2 Drill Opening Plows; to the great improvement in the Double Wheel Hoe Frame; to the Plain Single Wheel Hoe, offered for the first time, and to a new furrowing attachment for the Single Wheel Hoe and Combined Drill. We would also direct attention to our new Orchard Cultivator, the best and most easily managed tool that has ever been offered for orchard work. Our trade mark 'Planet Jr.' is known the world over, and our goods are everywhere recognized as the standard in this line; but our constant aim is to improve, and we shall at all times be glad to have friendly criticisms and suggestions with the view of better adapting any of our tools to do more perfect work."

The Western Wheel Works, Chicago and New York, in their little advance catalogue for 1895, illustrate and describe their well known Crescent Bicycles. Among these are noted the Crescent Scorcher Nos. 1, 2, 3, 4, 5 and 6. They also describe their various parts and appliances which they are prepared to furnish, and in a note of introduction say: "In placing our Crescents on the market for 1895, we feel that we have thoroughly demonstrated and proved that a good and reliable bicycle could be made and sold at a moderate price. We have no apologies or explanations to make. When we made our 'standard prices' (December, 1893), we stated then that they would stand for years to come. We also stated in our introduction in our last year's catalogue as follows: 'The new Crescents inaugurate a revolution in the cycle trade, and present that which the public has been looking for since cycling began.' Our prophecy has proved true, for the public has appreciated our efforts to such an extent that all other makers have been forced to reduce their prices in order to compete with us. We have improved every detail of design and manufacture in our '95 wheels; and we feel that the agent, and the rider as well, will be satisfied with the result of our efforts. We have reduced the weights, and in other points made our wheels equal to any. Last year the wood rim was only an experiment. The one we will use for '95 we tested thoroughly last year, used thousands of them, and feel that ours for '95 will be entirely satisfactory. The Crescent line will be fitted with wood rims throughout. Our policy has always been to make honest wheels and sell them at honest prices. This policy we will strictly adhere to in the future."

The old established house of Wallace & Sons, brass and copper rolling mills, with sample rooms and warehouses at No. 29 Chambers Street and No. 5 Reade Street, New York, and mills at Ansonia, Conn., have issued a new illustrated catalogue. Their previous efforts in this direction have met with the highest commendation, and certainly their present issue demonstrates the progressive position this house has for nearly half a century maintained in the brass and copper trade. The book will be a very acceptable addition to the catalogue libraries of Hardware merchants, metal workers, etc., etc., and will, on account of its complete price lists of different articles as well as its tables of measurements, weights, etc., become a standard book of reference for dealers in their line. Special attention has been given to details, particularly in revising various price lists hitherto more or less confusing, and these changes, together with the profuse illustrations of the various articles they manufacture, make everything quite clear, even to those who may not be thoroughly familiar with the business. The book is also illustrated with cuts showing the improved manner of packing various articles for the convenience and utility of the shelf Hardware trade, such as Star brand copper rivets and burs, copper tacks and nails, spelter solder, etc. Great care has also been taken in specifying the stock sizes of the different goods they carry to enable customers who are in urgent need to be able to see at a glance what they can order, with the assurance of receiving prompt shipment. Several pages in the back of the catalogue are devoted to tables of weights, measurements, etc., etc., of different metals, such as sheet copper, seamless brass and copper tubing, brass and copper rod, etc., so as to enable the trade to estimate on goods of this description comprehensively.

The Bridgeport Gun Implement Co., Bridgeport, Conn., and New York, have published a catalogue of their Cyclometers and other bicycle specialties. We find therein illustrations of their three models of cyclometers for 1895, Star Lamp Brackets, Paravaseline, Emery Paste, Standard Oilers, Universal Whistles, Echo Calls, Search Light Lanterns, etc. The catalogue is neat and handy, and contains a great deal of information in regard to bicycle specialties, prices, etc., that will be of value and interest to that large portion of the retail Hardware trade that is now interested in bicycles. They will be pleased to send catalogue upon application.

The Grand Rapids Refrigerator Co., Grand Rapids, Mich., are publishing a very handsome little catalogue of the Leonard Cleanable Refrigerators manufactured by them. These goods are illustrated, not only by views of their refrigerators and parts thereof, but also by symbolic representations which are attractive to the eye and assist in impressing upon the minds of readers the fact that these goods are first-class in every respect. The company will be pleased to send this catalogue, or other information in regard to their famous Cleanable Refrigerators, upon application.

The Griswold Mfg. Co., Erie, Pa., have issued a little supplementary catalogue for 1895, which presents various features of interest. We find therein descriptions of their Erie hollow-ware, Erie aluminum cast ware, aluminum castings, aluminum tea kettles, skillets, saucepans, lemon squeezers, etc. Also their new improved American waffle iron, French gas griddles, waffle stoves, American damper and damper clip, Erie broilers, and coffee mills, sliding ice pick, gas blast forge, etc. A very entertaining discussion of the value of aluminum cooking utensils is also found in the catalogue.

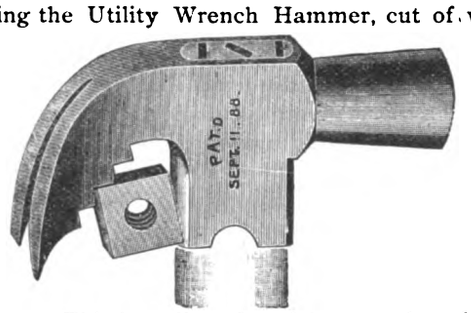
NEW GOODS IN THE MARKET

If you have anything NEW, let the world know it by illustrating it in these columns.



NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

The Utility Wrench Hammer.

The Marshall-Wells Hardware Co., Duluth, Minn., are introducing the Utility Wrench Hammer, cut of which is

here shown. This is well made, of best steel, and in addition to being a first-class nail and claw hammer, takes the place also of a monkey wrench, as it will turn readily all sizes of nuts, either square or hexagonal, from three-eighths of an inch to one inch inclusive.

Orange and Lemon Peeler.

Rogers & Bro., No. 16 Cortlandt Street, New York, are offering the trade a practical novelty in the shape of Orange and Lemon Peelers. Both Figs. 1 and 2 are of actual size. When used, the hook of the peeler is forced under the orange skin, the fruit revolved in the other hand, and the peel cut into as many sections as required, the flat face of the hook being about three-sixteenths-inch wide. The blade is then inserted under the loose ends of the sections and readily removed, together with the soft, white underskin. In Fig. 1 is seen the table size, while Fig. 2 represents one for pocket use; Fig. 3 the method of use. The latter are put up in neat leather sheaths or cases; are made in plain, fluted and embossed patterns, either polished bright or in satin finish.

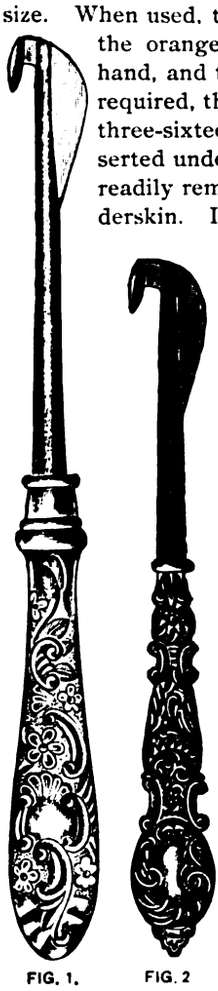


FIG. 1.

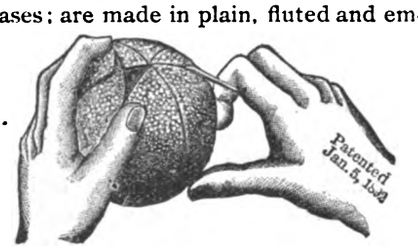
FIG. 2



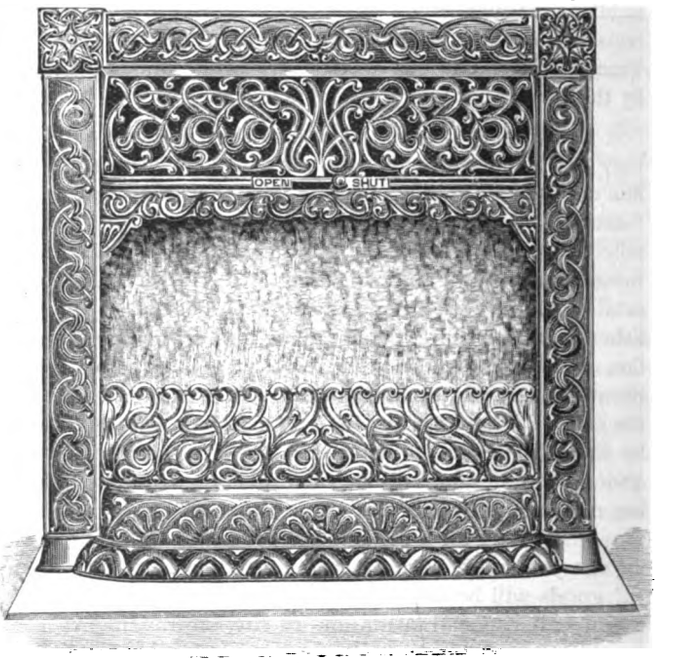


FIG. 3.

Fire King Gas Grate.

A. Weiskittle & Son, Baltimore, Md., are marketing a Gas Burning Grate known as the Fire Grate, which is here illustrated. The manufacturers state that "the burner used is something new in that line and from it is produced excellent results. It is so made as to produce when in operation a solid wall of fire at the back of the grate. A combination cock is used, enabling its adjustment to suit any kind of gas." Another feature referred to is the damper, which is easily operated from the outside, and can be set to carry off the products of combustion without permitting an undue escape of heat to the chimney. "It is well known that in the consumption of some gases more ventilation is required than with others, and the claim is made that this damper enables the operator to give the grate proper ventilation; the construction of these grates is such that they heat by reflection, radiation and circulation." They are made in various styles of finish, such as ebony, oxidized, bright brass, etc. A catalogue of Fire King gas stoves has just been issued by the company.

Oil and Gasoline Can.

A. F. Chable, No. 2827 Euclid Avenue, Cleveland, Ohio, is manufacturing an Oil and Gasoline Can, cuts of which are here given. Fig. 2 is a general view of the Can; Fig. 1 shows it in use. "The emptying tube, which is the principal feature of the Can, is formed of a single piece and is bent to the shape shown in Fig. 1. The position which the tube occupies at the side of the Can is such as to bring the body portion of it close to the side, thus causing the tube to offer no obstruction as an attachment to the Can. The lower inward bent portion of the tube is threaded, and is secured to the Can by the use of a stuffing box, the latter being soldered in the Can as near the bottom as possible, so that all the liquid may be readily drawn off. When filling a vessel of any kind, it is only necessary to release the tube at the top and lower it to a horizontal position, when the full pressure of the contents will be exerted and the liquid will be discharged, and when the vessel is

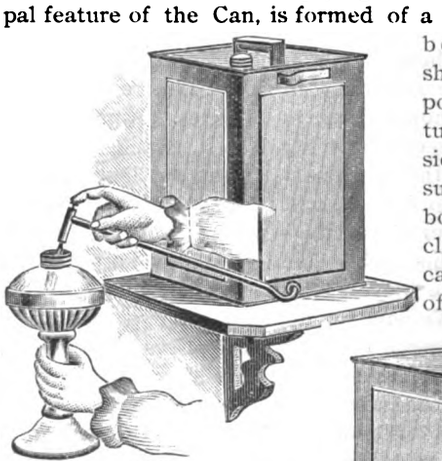

FIG. 1.

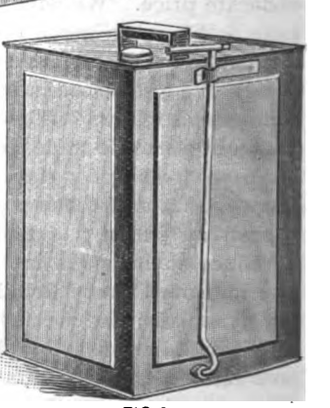

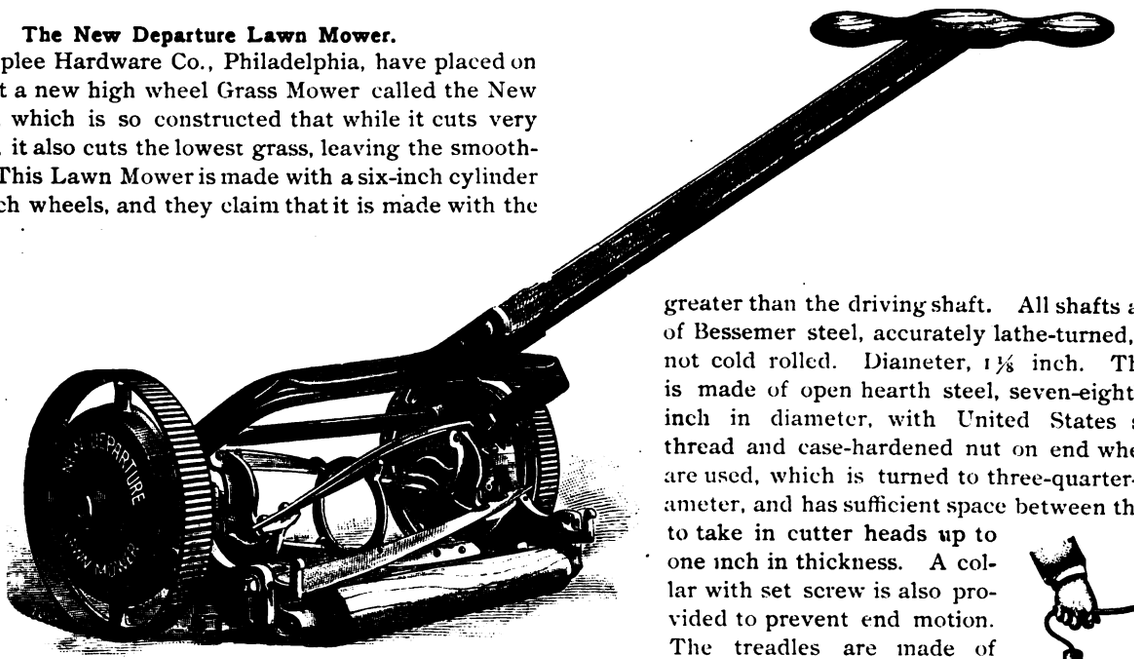

FIG 2.

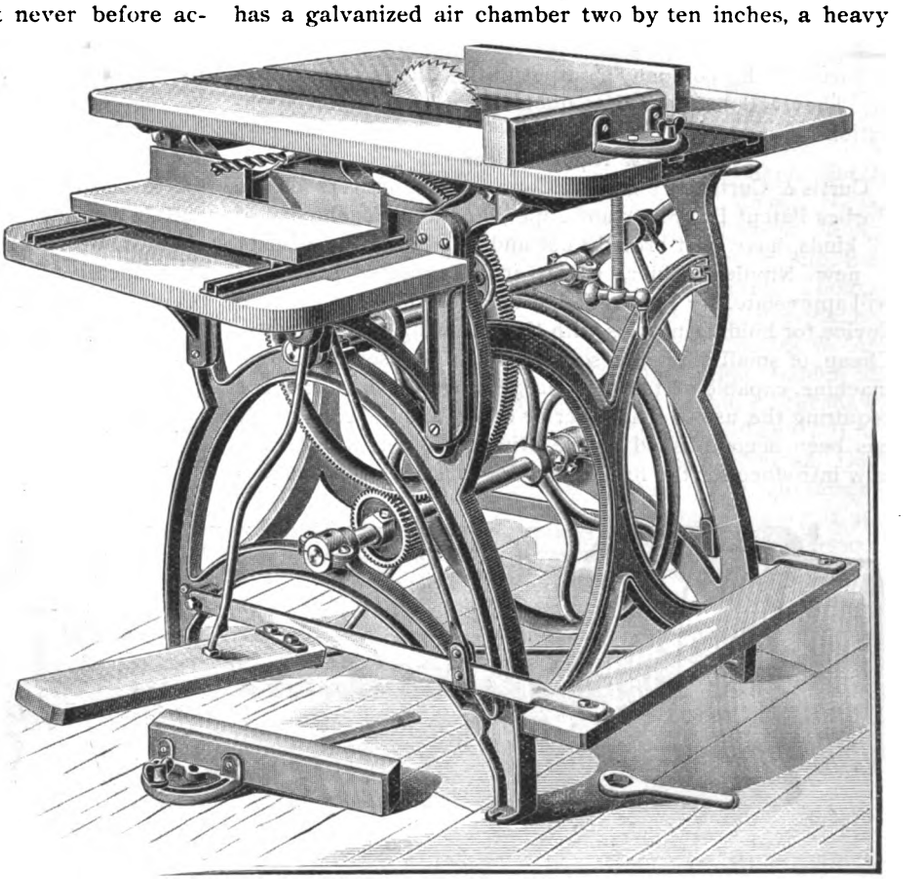
Digitized by Google

filled, the flow is instantly stopped by restoring the tube to its upright position." The tube and attachment can be placed on any can or tank and can be bought separate from the Can.



The New Departure Lawn Mower.

The Supplee Hardware Co., Philadelphia, have placed on the market a new high wheel Grass Mower called the New Departure, which is so constructed that while it cuts very high grass, it also cuts the lowest grass, leaving the smoothest lawn. This Lawn Mower is made with a six-inch cylinder and 9½-inch wheels, and they claim that it is made with the same good qualities as embraced in the Continental and Pennsylvania Lawn Mowers. This Lawn Mower has a patent adjustable device for the cutter bar (or dead knife), which will prevent any unequal wear of the dead knife, and by their construction of two set screws, the slight wear that is so troublesome in many mowers is in this one avoided, as with it the least informed can do all that is necessary by slightly turning two adjustable set screws. The New Departure is made self-sharpening to the full extent of the word, and sold under a full guarantee of performing all that is claimed for it. The cylinder can be removed without taking the frame apart, which is a point never before accomplished. The New Departure is made in 15, 16 and 19-inch, the lists of which are $25, $28 and $31, respectively, with a discount to the trade.

Marston's Hand and Foot Power Circular Saw.

The illustration here shown is a Hand and Foot Power Circular Saw, manufactured by the well-known firm of J. M. Marston & Co., Boston, Mass. The frame is made entirely of iron, and of a design that gives it great strength. and with the amount of iron and the thorough manner of bolting together, makes it very rigid, and its weight is sufficient to make fastening to the floor while working unnecessary. In its construction nothing is used but the very best of iron and steel, and all parts are designed with reference to the work they are to perform. The working parts consist of two shafts and the saw arbor. The centre shaft receives the power from the operator, either by treadle or crank, and is applied direct by means of a 20-inch cut gear on that shaft, which meshes into a two-inch gun metal gear on the saw arbor, and also with a 4¾-inch gear on the lower shaft, which also carries a lathe turned balance wheel, 23 inches in diameter, and weighing 40 pounds. By this means the balance wheel is given a speed 4½ times greater than the crank or driving shaft, giving it sufficient momentum and power to carry the saw steadily through the work. At the same time the 20-inch gear, meshing into the two-inch gear on the saw arbor, gives the saw a speed ten times greater than the driving shaft. All shafts are made of Bessemer steel, accurately lathe-turned, and are not cold rolled. Diameter, 1⅛ inch. The arbor is made of open hearth steel, seven-eighths of an inch in diameter, with United States standard thread and case-hardened nut on end where saws are used, which is turned to three-quarter-inch diameter, and has sufficient space between the collars to take in cutter heads up to one inch in thickness. A collar with set screw is also provided to prevent end motion. The treadles are made of wrought iron, and the cranks have extension handles that can be adjusted to different length of stroke. The table is 28 inches wide by 37 inches long, and the entire height of machine is 36 inches.

The Crescent Automatic Spray and Force Pump.

The Crescent Brass & Iron Works, Detroit, Mich., are offering the trade the Spray Pump which is here illustrated. It is designed for bucket use only. It has a galvanized air chamber two by ten inches, a heavy brass cylinder, metal valves, brass spiral spring and a saucer-shaped anti-clogging foot. The length of the rubber tubing is twelve inches.

Alaska Tack Hammers.

The Troy Nickel Works, Troy, N. Y., whose "always cold" stove specialties are so well-known to the trade, are

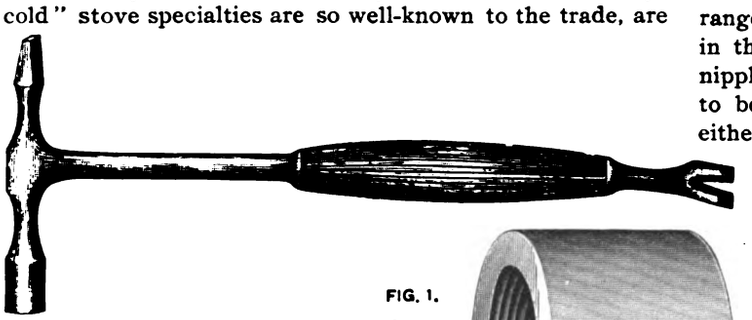

FIG. 1.

successfully placing upon the market a line of Tack Hammers here shown. They are described as made in a first-class manner, of the best material. In Fig. 1 is shown the Perfect Ladies' Ham-

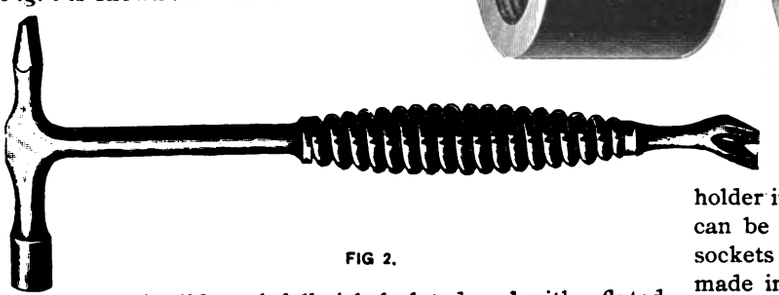

FIG 2.

mer, made of solid steel, full nickel-plated, and with a fluted rubber handle. In Fig. 3 is seen the Alaska Tack Hammer, made also of solid steel, and full nickel-plated. Still another form of the company's output in this line is seen in Fig. 2. They will be pleased to quote prices, etc., upon application.

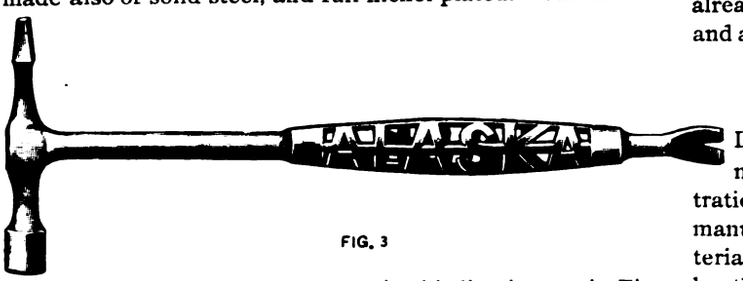

FIG. 3

New Nipple Holder.

Curtis & Curtis, Bridgeport, Conn., manufacturers of the Forbes Patent Die Stock and Pipe Threading Machinery of all kinds, have just brought out and placed on the market a new Nipple Holder, which it is expected the trade will appreciate. "The trade has long felt the want of some device for holding nipples with the following requirements: Cheap, of small diameter, so that it can be used in a pipe machine, capable of taking a large range of sizes and not requiring the use of a hammer or other tools. This result has been accomplished in the Nipple Holder, which they now introduce for the first time. Fig. 1 is a transparent picture to show the internal workings of the holder. To operate the holder, a socket (B) of the proper size for the pipe to be held, a separate cut of which is shown, Fig. 2, is secured to the body (C) by an one-eighth turn, and the screw (D) is run forward by a wheel provided at D. The nipple is then screwed into the socket as shown in the cut, but is so arranged that it bottoms on the plunger (A) before it jams in the thread and is thus held securely. To release the nipple, a part of a revolution of the screw (D) will allow it to be removed by the fingers. These holds can be used either in a vise with a common die stock, or they can be used with any of the pipe machines now on the market, as well as with the Forbes Patent Die Stock manufactured by this firm. To meet the requirement also of the common style of over-hung spindle machines, this firm has also adopted this same principle to a holder intended for their use. Either right or left threads can be held with equal ease, and at a very slight expense sockets for any unusual thread required. They are now made in various sizes up to a capacity of six-inch pipe, but can be made to any required size." Although they have never been advertised, already large quantities have been sold and a still larger trade is expected.

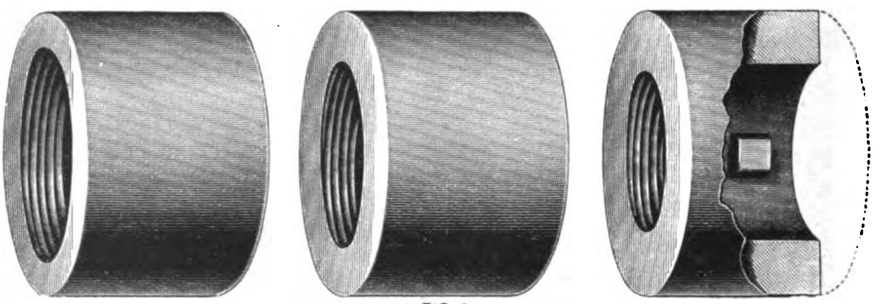

FIG. 2.

The Eclipse Lawn Sprinkler.

The Crescent Brass & Iron Works, Detroit, Mich., are placing upon the market a Lawn Sprinkler, an illustration of which is here given. The manufacturers state that it differs materially from the Crown sprinkler made by the same company in having no revolving parts; that it cannot be demolished when stepped on, and that it will last a life-time. The sprinkler is made for three-fourth-inch hose attachment, and distributes the water evenly, it is claimed, over a circle of thirty-six feet in diameter. It is made of cast iron, and is japanned in bright vermillion.

Eclipse Can Opener and Cover.

J. H. Seed, Nos. 21–23 Center Street, New York, is offering a device for opening cans. It also serves as a cover, the cut of which is here shown. The maker states that "it keeps the milk sweet, and all objectionable substances, such as insects, dust, etc., are excluded. It is highly recommended by all cooks. It does the work easily, and makes a clean cut. The knife is made of the very best tool steel, and the cover is highly nickel-plated. The extreme sim-

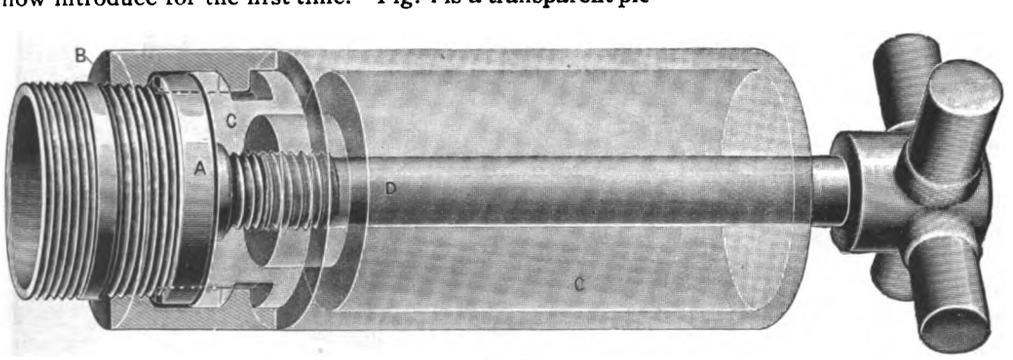

FIG. 1.

Digitized by Google

plicity, low cost and utility of this little article has made it very popular, and thousands of housekeepers are using it with perfect satisfaction." The following are the directions for using: Place the cover on the can, and with a slight pressure force the point of the knife through the tin; hold can firmly and turn the cover once around. Always open the can at the thin end and thus avoid cutting through double tin and solder.

A Modern Watch.

Robert H. Ingersoll & Bro., No. 65 Cortlandt Street, New York, have made an advance step in one direction that will appeal directly to Hardware dealers who carry the latest novelties in stock. They are offering a new American Stem-winder Watch that they declare is "a duplicate in quality, appearance, size, etc., of any American watch sold for less than $10, and which we positively and unequivocally guarantee." They have sold thousands of these to Hardwaremen, who have found it well worth their while to handle. In Fig. 1 we see the Climax Watch and in Fig. 2 a representation of its movement. In description of it the makers say: "This is the Climax up to date. It represents the most important step taken in watch evolution in many years. It describes a line beyond which nothing radical will pass for years, not only in the matter of price, but quality. The movement comprises many original patented features, and has been for years the subject of constant labor by one of the foremost of experts and inventors. Cases—two styles, plain and imitation engraved. Two finishes, solid gilt and nickel. Two dials, Roman and Arabic. Snap back. Heavy Bevel crystal. Regular stem wind. Inside stem set. Regular 18 size case. Chains assorted in each dozen. Movement—regular American lever, lantern pinion, quick train, 240 beats per minute, three-quarter plate, short wind. Runs 30 hours to one winding. Dust cap over movement. Fully timed and regulated, and fully guaranteed for one year, the same as a Waltham or Elgin. The cheapest Stem-winding Watch ever produced. Trade price (net spot cash), including chains, $15.60 per dozen."

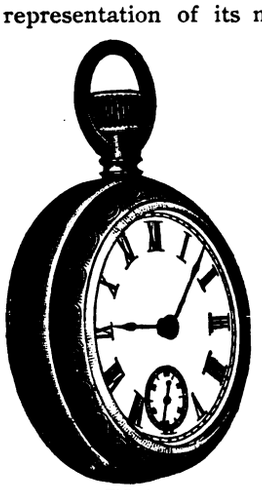

FIG. 1.

FIG. 2.

National Association of Manufacturers.

The gathering of manufacturers in Cincinnati, on January 22nd, concerning which we have had considerable to say from time to time, was a success, both as to attendance and results. There were a large number of manufacturers present from all parts of the country, who devoted their time with great enthusiasm to the purpose of a new organization during the three days of their attendance. The convention was called to order on Tuesday, the 22nd, by W. B. Melish, chairman of the committee on entertainment, who announced the temporary officers as follows: Chairman, Thomas P. Eagan. Secretary, E. P. Wilson. The chairman, in a brief speech, outlined the purpose had in view in this proposed organization of American manufacturers, and then introduced Hon. William McKinley, Governor of Ohio, who delivered a stirring address concerning the purpose of the gathering, at the conclusion of which he said:

"We want our own markets for our manufactures and agricultural products; we want a foreign market for our surplus products which will not surrender our markets and which will not degrade our labor to hold our markets. We want a reciprocity which will give us foreign markets for our surplus products, and in turn that will open our markets to foreigners for those products which they produce and which we do not."

An address was delivered by Mayor Caldwell, of Cincinnati, after which committees on organization, credentials, resolutions, etc., were appointed. At the afternoon session the committee on resolutions reported the following, which was carried:

Whereas, United action in all matters affecting the manufacturing industries of the United States of America is essential to their conservation and promotion, the same can be better effected by the formation of a National Association of Manufacturers of the United States; therefore be it

Resolved, By the manufacturers of the United States in convention assembled in the city of Cincinnati, Ohio, this 22d day of January, 1895, that a national organization of manufacturers of the United States be formed to carry into effect said purpose; and that the chairman of this convention be authorized to appoint a committee of fifteen to prepare a constitution and by-laws for said association, to be reported at the session of this convention Thursday morning, January 24th.

The temporary officers were chosen as permanent officers. Speeches were made by a number of prominent gentlemen, and the principal work of Thursday was the adoption of the constitution, which provided that the association should consist of all national, state and local associations, clubs, societies and other organizations of manufacturers in the United States, and associate members as shall from time to time be admitted thereto by a vote of three-fourths of the executive committee of said association.

The officers were to be a president, treasurer and secretary, with one vice-president from each State and territory. The association is to meet annually. An executive committee, with headquarters at Cincinnati, was to be created, and each association, society, club, organization and associate member shall pay $50 dues per year. The following gentlemen were elected officers:

President, Thomas Dolan, Philadelphia, Pa.; Treasurer, Robert Laidlaw, Cincinnati, Ohio; Secretary, E. P. Wilson, Cincinnati, Ohio. Vice-Presidents: Hon. Warner Miller, Herkimer, N. Y.; William D. Shallenberger, Pittsburg, Pa.; John B. Kirk, Chicago, Ill.; Thomas P. Egan, Cincinnati, Ohio; L. D. Kingsland, St. Louis, Mo.; Fred. W. Silvey, Milwaukee, Wis.; P. E. Studebaker, South Bend, Ind.; Arnold B. Sanford, Fall River, Mass.; R. G. Soloman, New Jersey; John B. Howarth, Detroit, Mich.; Pliney Jewell, Hartford, Conn.; W. R. Vanderclute, San Diego, Cal.; C. A. Pillsbury, Minneapolis, Minn.; Thomas Deford, Baltimore, Md.; Charles Fletcher, Providence, R. I.; Theodore Ahrens, Louisville, Ky.; Charles W. Armour, Kansas City, Kas.; J. H. MacMullen, Biddeford, Maine; Levy C. Barton, Omaha, Neb.; Dabney Crenshaw, Richmond, Va.; C. D. Mitchell, Chattanooga, Tenn.; H. C. Tossey, Sherman, Texas; L. F. Hanson, Warren, Ga.; Ex-Gov. H. C. Warmouth, New Orleans; H. F. De Bardeleben, Birmingham, Ala.; W. Robertson, Denver, Col.; W. H. H. Green, Seattle, Wash.; John Wilkes, Charlotte, N. C.; Thos. Somerville, Washington, D. C.; Colonel Fairbanks, St. Johnsbury, Vt.; John R. Linden, Rock Hill, S. C.; John A. Lewis, Meridian, Miss.; W. B. Scott, Wheeling, W. Va.; Geo. Sellers, Wilmington, Del.; Fred'k Lewis, Bartow, Fla.

During the convention a speech was delivered by ex-Governor Foraker, of Ohio, on Reciprocity. The delegates were most handsomely entertained by the manufacturers of Cincinnati.

F. T. Blish will open a new Hardware store at South Manchester, Conn., with a complete line of builders' Hardware, mechanics' tools, cutlery, sporting goods, agricultural implements, seeds, etc.

ILLUSTRATED BICYCLE NOVELTIES.

MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, whic hwill appear immediately.

Buffalo Cycle Co.

The Buffalo Cycle Co., of Buffalo, N. Y. (formerly Buffalo Tricycle Co.), are placing on the market their Envoy and Fleetwing wheels for 1895, illustrations of which are

FIG. 1 – THE ENVOY.

here shown. These goods consist of 26 inch and 28 inch sizes in each style, listing at $60 and $75 respectively—Envoy, 28 inches, weighing. 23 pounds, and Fleetwing, 28

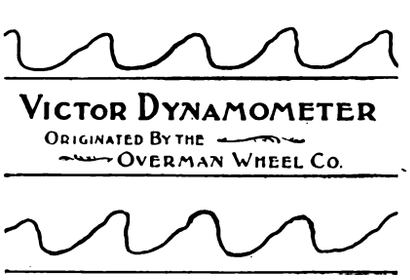

FIG. 2.—THE FLEETWING.

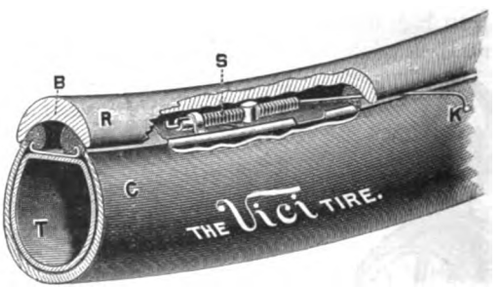
inches, 26 pounds. Smaller sizes are proportionately less. These wheels the makers guarantee as "absolutely high grade and perfect in every detail."

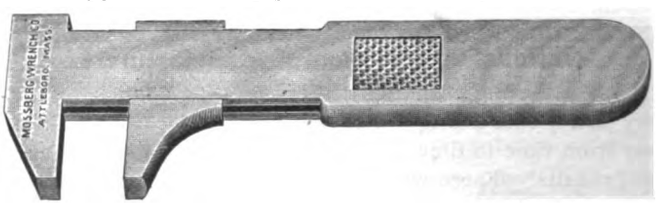
Victor Dynamometer.



The Overman Wheel Co., Chicopee Falls, Mass., are offering a device known as the Victor Dynamometer, illustration of which is here shown. This device is an instrument for measuring the exact power required to propel a bicycle. The company say that they "have concentrated their attention upon those features of construction which bear directly upon draft. This led to the invention of a device for accurately testing the expenditure of energy used in propelling the bicycle. The result of this is the Victor Dynamometer, and by means of this device the

Overman Wheel Co. long ago ceased to guess concerning all those features which bear upon this vital question. By means of the delicate recording apparatus of the Dynamometer, we are enabled to determine the amount of power required to drive bicycles in all the various styles and equipments with which they may be constructed. Thus, while some manufacturers are making rear sprockets with 5, 6, 7, 8 or 9 teeth, according to the fancy or caprice of riders, we know the exact difference in power required to propel machines varying in this particular feature, and build our bicycles accordingly. The introduction of this testing machine marks an epoch in bicycle making. It has enabled us to build a bicycle wherein skill is substituted for guessing."

Vici Locking Tire.



The Boston Woven Hose & Rubber Co., Boston, Mass., are offering the trade the Vici Locking Tire. This tire consists of an outer cover, an endless air-tube and a clamping band, which secures the cover to the rim. The manufacturers state the band B (see illustration) is made of very

thin cold-colled steel, with folded and turned edges, which engage the hook-shaped beads on the cover, about one-eighth of an inch below the edge of the rim. The band extends entirely around the wheel, forming a level, smooth seat for the air-tube; its ends overlap each other, and are connected together by the screw-device S, operated by the key K, shown in cut. Turning the key, K, to the right tightens the band. Turning it to the left loosens it. When the tire is all on, the key, K, is pushed under the cover, concealing all but the rounded end of key K, and leaving the tire so securely fastened to the rim that it cannot creep or be pulled off the rim even when deflated. Pulling the key, K, out, and turning it to the left a few times, loosens the band so that the cover may be removed altogether, or a portion of the air-tube exposed for repairs.

Mossberg Bicycle Wrench.

The Mossberg Wrench Co., Attleboro, Mass., are placing upon the market a Bicycle Wrench, illustration of which is here given. It is stated by the company that this wrench is expressly designed for the '95 Cycle, and can be carried in the upper coat or hip pocket without any inconvenience

—a feature of no small importance, as many of the bicyclers at the present time carry no tool bag. It is made from spring steel, hardened and tempered in oil. It weighs 4 ounces, and comes in black and nickel.

A bicycle to seat three persons is coming into use in Boston and the suburbs. It is well shaped, each of the three riders doing his work. It is, however, well calculated to breed "family quarrels," "two being company and three a crowd." The rider on the front seat is, however, bound to come out first.

The main building of the Hatch Cutlery Works, South Milwaukee, Wis., was destroyed by fire January 23rd. The loss is estimated between $13,000 and $14,000, fully covered by insurance.

Hardware Dinner of 1895.

THE ANNUAL GATHERING A SUCCESS IN ALL RESPECTS.

THE HARDWAREMEN AND THEIR GUESTS GATHER AT SHERRY'S IN LARGE NUMBERS, AND PASS AN EVENING OF UNALLOYED PLEASURE.—ABLE AND WITTY SPEECHES FROM MEN WELL KNOWN IN THE TRADE.—THE ADDRESSES IN FULL.—LIST OF GUESTS, ETC.

The Annual Hardware Dinner of 1895, which was given at Sherry's, Fifth Avenue and Thirty-seventh Street, New York, on the evening of Thursday, January 31st, was in all respects a success, and a fitting continuation of the custom so happily inaugurated in 1892. The attendance was large, and the evening proved to be one of rare pleasure and profit to all whom circumstances permitted to be present.

When the time had arrived for taking steps toward holding this Dinner, the matter was taken in hand by the Board of Governors of the New York Hardware Club, who decided that, as heretofore, it should be a trade dinner as distinguished from a dinner of the Club, and Sherry's was again selected so that the routine arrangements of the club rooms should not be interfered with. The president of the Club appointed the following gentlemen as a general committee having the matter in hand:

DINNER COMMITTEE:

Alfred D. Clinch, *Chairman.*

Eugene Bissell,	Edward C. Van Glahn,
Brace Hayden,	John L. Varick,
James H. Kennedy,	Webster R. Walkley,
Peter McCartee,	Richard R. Williams,

William H. Williams, Ex-officio.

The selection of Alfred D. Clinch for chairman, which was of course a foregone conclusion in view of his magnificent work in connection with previous dinners, was a guarantee that everything would be carried forward in a most admirable manner, and certainly the thanks of the trade generally are again due Mr. Clinch for his ability, industry, and genius for management, in promoting so far as lay within the power of one man, the success of this great social event. The president of the club, William H. Williams, and the other associates of Mr. Clinch upon the committee, did everything in their power to aid in this work. The chairman of the reception committee, Peter McCartee, who is also a member of the board of governors, was very judicious in the selection of the reception committee to assist him in receiving the guests, and when the members of the trade and their guests assembled at Sherry's on the night of the dinner, they found the chairman and his associates on hand to receive them. The gentlemen associated with Mr. McCartee in this work are as follows:

RECEPTION COMMITTEE:

Peter McCartee, *Chairman.*

Robert Sickels,	James D. Foot,
George J. Laighton,	Frank J. Oliver,
T. J. Atkins,	Terence F. Curley,

W. A. Hungerford.

The evening was one of great pleasure, and certainly of no little profit to all who were there. The arrangements of the tables, and the names of the gentlemen who sat in the various seats at the same, will be found in the accompanying diagrams. The menu was first-class in every respect, and the programme for the literary exercises of the evening had been arranged with considerable skill; and it is but just to say that seldom are the same number of speakers of exceptional ability and powers of entertainment, gathered together under one roof, upon an occasion like this. The speeches were full of sense and wit, and we make no apology whatever for reproducing them in full. One feature of special interest was the appearance of Recorder Goff, whose reception at the hands of the diners certainly showed him that he had found secure lodgment in the affection and respect of his fellow citizens.

The company began to gather at six o'clock, and at a few minutes after seven, the doors of the dining-room hall were thrown open, and each diner was guided to his place by a diagram which had been thoughtfully prepared and distributed throughout the company. As each reached his place he found a handsome little volume containing the menu, order of toasts, location of guests, etc., provided by the generous courtesy of the *Iron Age*. These served not only the useful purpose above indicated, but were also carried away and preserved as souvenirs of the occasion, the more especially as upon each copy was engraved in silver letters the name of the recipient in full. Blank spaces were left in these little books for autographs, and one of the most attractive features of the evening was the skirmishing about for the purpose of securing names, especially those of the most distinguished among the guests, Mr. Goff in particular being at one time surrounded by a small multitude, anxious to have his name upon their lists.

William H. Williams, president of the Hardware Club, had been selected by the committee to preside, and sat at the centre of the guests' table. The gentlemen who honored the occasion by their presence at the heads of the various tables were as follows: E. Bissell, table A; Peter McCartee, table B; Alfred D. Clinch, table C; J. Leonard Varick, table D, and Edward C. Van Glahn, table E.

When the gentlemen had reached their places, each stood beside his chair, while the president and members of the committee, as an escort to the speakers and other guests of honor, marched into the room, two by two, and around to the raised dais at the end of the hall. They were greeted by a round of applause.

When all were in their places the Rev. Dr. Sanders invoked divine blessing, after which all were seated and cordially addressed themselves to one of the main features of the evening, which is best described by the following *menu:*

MENU.

Blue Points.
Consomme de Tortue.
Vol-au-Vent a la Reine.
Saumon Hollandaise.
Fillet de Bœuf Brabant.
Terrapin.

SORBET.

Ruddy Duck.
Hominy.

GLACE.

Pudding Neselrode.
Gateaux. Bonbons.
Fromage.
Cafe.

During the dinner a band in the gallery discoursed inspiring music, and more than once during the evening, when some familiar strain was heard, the whole audience joined in the suggested song. The tables wore beautifully decorated with great banks of American Beauty roses, while the front of the guests' table was adorned with smilax.

One pleasing incident occurred in course of the dinner when Recorder Goff, who had been belated, was seen to take his place upon the platform. Cries of "Goff!" "Goff!" were heard upon all sides. Some one cried out, "Three cheers!" and they were given with a will. Some one else cried "Tiger!"

A storm of answers came: "No tiger! no tiger!" and the wave of laughter that rolled over the house showed that the point had been taken.

When the first order of the evening was amply justified, the hour of 9:15 had been reached, and the time arrived for

Digitized by Google

the second part, the character of which is outlined by the following:

TOASTS.

1. GREETING, - - - - - - William H. Williams, President New York Hardware Club.
2. TOOLS, - - - - - - - - - David Williams.
3. PRINCIPLE IN POLITICS, - Hon. Charles A. Schieren. Mayor of Brooklyn.
4. BASS SOLO, - - - - - - Ericsson F. Bushnell.
5. A BROOKLYN VIEW OF THE GREATER NEW YORK, Timothy L. Woodruff.
6. A FRIEND FROM CLEVELAND, - - Stewart H. Chisholm.
7. SWORDS AND PLOWSHARES, - Rev. Henry M. Sanders, D.D.
8. IRON IN THE PUBLIC PRESS, - - - Andrew McLean.
9. BASS SOLO, - - - - - - - Ericsson F. Bushnell.

President Williams arose and called the company to order. He then made the opening address, as follows:

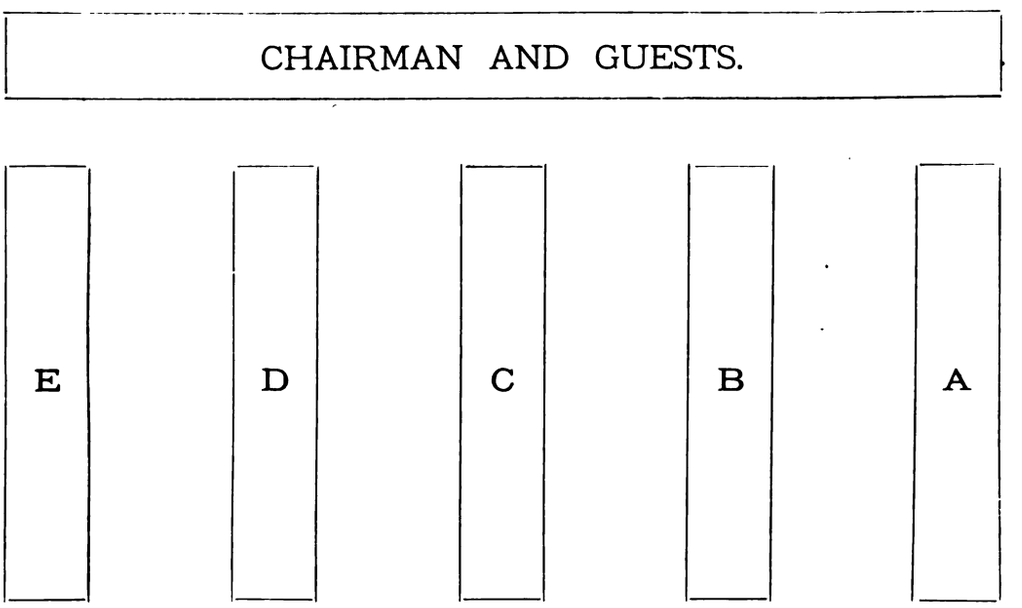
A "GREETING" BY PRESIDENT W. H. WILLIAMS.

Guests, Members of the Hardware and related trades, and friends: The chairman, on an occasion like this, occupies a position somewhat analogous to that of the headlight of a locomotive. When you see him you know there's something coming. Although for the time being he is a sort of central luminary, comparatively, he is of little consequence. To pursue the analogy a little farther: when you have escaped from the intrusive stare of the headlight, it ceases to cut any figure at all in your environment, and your interest quickly becomes focused on the propelling mechanism, and on the train which follows.

The "propelling mechanism" to-night—so brilliantly represented by members and friends—is the New York Hardware Club, and the passengers whom it is piloting into realms of eternal fame are the gifted orators, most of whose names adorn the unique and handsome cards which have been placed in your hands by an incomparable Dinner Committee.

With this introduction, a well regulated headlight endowed with an ordinary amount of modesty, might be content to pass on into darkness and silence, and leave you to the uninterrupted enjoyment of the published programme; but, though I promised the Dinner Committee, in consideration of the privilege and distinction of being permitted to preside at this festive board, that I would not inflict a speech upon an innocent and unoffending company, the temptation to say a few words by way of salutation is irresistible.

You have met under the auspices of a Club which owes its existence, as you will remember, to a similar gathering in this very hall three years ago; and as president of the Club, it is my privilege to welcome you to-night most cordially and fraternally, and to give you the assurance that the child which you then started on life's troublous journey, has already reached mature powers, and enjoys the felicity of knowing that it is accomplishing its mission to the general satisfaction of its parents and friends, along lines of usefulness and under conditions of prosperity which promise for it a career of more than ordinary longevity. The meetings which you inaugurated three years ago have had an influence in stimulating similar gatherings in other parts of the country, until now the annual dinners and conventions of Hardwaremen are among the important features of our business life.



We read that in the early progress and development of the Guilds of Europe they became the "bulwarks of the citizens' liberty," and that in the thirteenth, fourteenth and fifteenth centuries they not only possessed considerable influence, but were a counterbalance against the powers of the feudal barons and nobles. That a like influence may flow from these associations of ours, is not, I trust, too much to hope. I need not dwell upon their social aspects. It is a good and pleasant thing to meet, around the social table, those whom we know and esteem in business, and it is hardly less a good or a pleasant thing to meet those whom we do not know but who are worthy of our esteem, under the same agreeable circumstances.

Nor is the business importance of such meetings to be lost sight of or ignored. If these gatherings of those engaged in the same line of business can be so utilized through their friendly and their social features, that they will tend to obtain for capital a better and a fairer return, then indeed will your labors receive a double reward.

It is natural on an occasion like this when good cheer reigns and kindly feelings predominate, that we should take an optimistic view of things in general.

Happily, the signs of the times permit us to regard the future with hopefulness, if once the financial clouds which at present hover over us shall be, as we trust they soon will be, dispelled. Surely there ought to be wisdom enough in the chosen legislators who shape our national affairs, to solve the present financial problems, without endangering the return to prosperity which we all believe is coming in the near future. Certain we are that the superb energies of this people cannot long remain inactive, and only monumental cussedness on the part of Congress and the Executive can long defer the return of brighter and happier times!

The president then continued: It has become one of the

ARRANGEMENT OF THE TABLES.

Digitized by Google

regrets of my life that I am denied the honor of claiming relationship with the next speaker, but I find some compensation in the fact that he is my fellow member in this Club, and also that I am permitted to enjoy his personal friendship. Among the many friends of our Club we have none more steadfast than David Williams.

The publisher of the *Iron Age* then spoke as follows:

DAVID WILLIAMS ON "TOOLS."

MR. PRESIDENT AND GENTLEMEN: It would be a pleasure and an honor for any one to address a company like this, which is so pre-eminently what the newspapers delight to term a large and representative gathering of the leading members of the trade. You may imagine how much more this is true of a man who passes his life surrounded by editors and writers constantly giving public expression to their views and feelings, while he, a mere publisher, has no opportunity of saying anything. The lawyers say that every man is entitled to his day in court, and it may be for some such reason the committee in charge of this dinner took pity on me.

Looking back but three years, we see the first Hardware dinner held in our time, if I may use the expression. That dinner marks an epoch. Before that there had been in the trade for thirty years no social life and no opportunity for friendly intercourse, except as men met casually in the hurry of business. Now all is changed: a great part of the Hardware trade revolves round the Hardware Club, where its members meet and pass some of the most pleasant moments of the day. I am glad of this opportunity of saying a word of appreciation and thanks to those to whom this result is due—its officers and governors. We all know with what magnificent success their efforts have been crowned, and most of us appreciate how wise, patient and unselfish have been their labors.

Mr. President, with your permission, I desire to propose the following resolution:

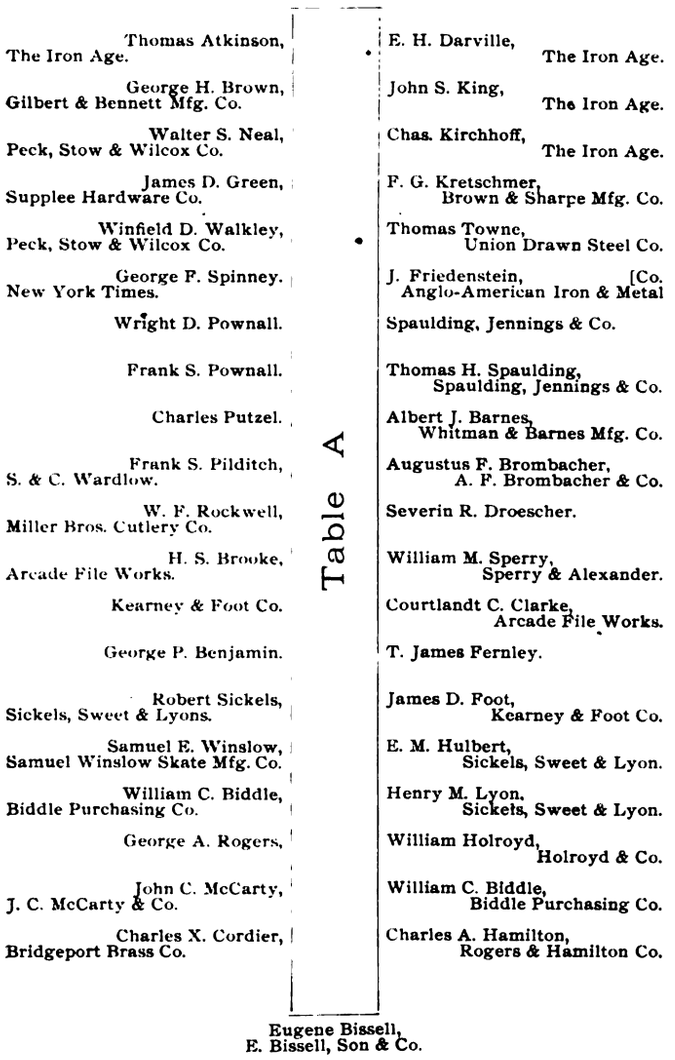
Resolved, That the Hardware trade, gathered at their sixth annual dinner at Sherry's, January 31, 1895, tender to the officers and governors of the Hardware Club their high appreciation and their hearty thanks for the wise, self-sacrificing and eminently able manner in which, avoiding all mistakes and overcoming all difficulties, they have accomplished the task of establishing a club in a trade until then without social organization, and of equipping and managing a club-house so perfectly adapted to its purpose and so worthy of the great trade of whose daily life it has become so large a part.

As our president has stated, he is a modest man, and his name shows he comes of a modest family. I, therefore, under the circumstances, will take the liberty of putting this question to a vote.

The question was then put by Mr. Williams, and the resolution unanimously adopted.

The speaker then continued: Man has been wisely spoken of as the only tool-making animal. In fact, tools lie at the basis of all we have and most of what we are. If you turn to the Mosaic account of the creation, you will find that the only duty or command imposed on our first parents, besides a certain restriction in regard to fruit, was to replenish the earth and subdue it, and rule over their animal fellow creatures. For the replenishment of the earth no special tools were needed, and that work was pretty well done from the beginning. The subjugation of the earth and dominion over the brute creation was a different matter. Scarce any animal so unfortunate as not to be better off than a naked man without tools, clothes or a home. The beaver, with his broad, flat tail and sharp teeth, gnawed down trees and made his lakes and villages; the bird made its nest; the rabbits burrowed in the ground then exactly as they do now. The animals have stood still; without tools progress was impossible, while man went on inventing and improving until he provided himself with all the comforts of civilization. About four hundred years ago the greatest tool ever invented came into use—the printing press, which has changed the whole condition of man and opened wide the door of progress. It has been the means of developing and making accurate and useful all the sciences which have resulted in the great discoveries, inventions, arts and industrial developments which characterize these last days of the nineteenth century.

We have dug into the ground deeper than ever man has been before and brought up new metals and made fresh combinations of the old. We have built up into the air twice as high as ever man built before. We navigate the ocean in swift express hotels and seem to be upon the point of soaring in the air on wings. We spin over the earth on our light bicycle faster than man was ever carried by the fleetest steed. Our iron horses draw us and our merchandise on iron roads that spanning rivers, crossing plains and tunneling under mountains, traverse a continent. Our electric wires annihilate distance and enable one in New York to hear the pulse-beat of his fellow in Chicago.



But the highest form of tools are not those that shape wood and metal, but those that fashion man;—the institutions of civilization by which society accomplishes the objects of government, education and progress. Armies, navies, political parties, schools, legislatures and courts are parts of what is commonly called the machinery of government. In our own case, the forefathers devised a governmental machine, the most perfect that has ever been established. In the lapse of years the National Government has shown its power to bear the strain of foreign war and domestic strife, and its fitness to extend across a continent and stretch its protecting arm over seventy millions of free people. Our State and local governments, too, have proved themselves equal to any emergency and able to overcome any difficulty provided they have common care and attention. They can survive anything but folly and indifference and laziness on the part of those running them.

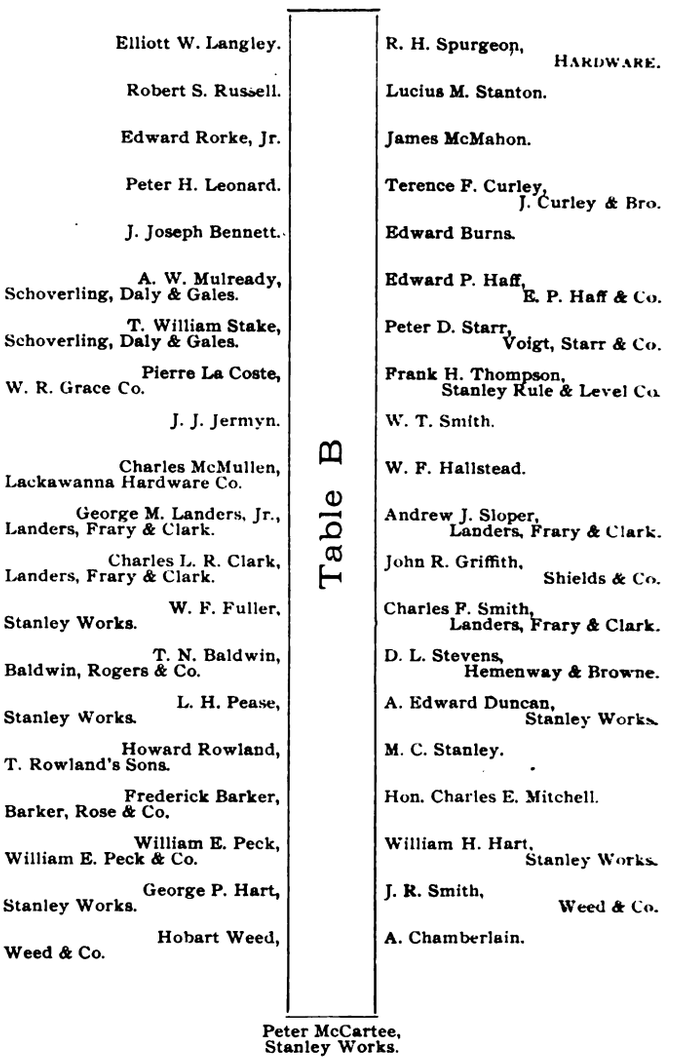
I do not think we ought to boast over-much of our management of this great machine. We have neglected it for years and then in a spasm of virtue we have risen in our might and overturned many things, and some of us feel as if the work of reform had been accomplished. Ah, no! the destruction of the bad is only the beginning of the work. The more tedious, difficult and vastly more important task of building up the good remains still to be done. A mob can destroy anything—a paroxysm of passing popular excitement can overturn a party, but to secure good government in the place of bad, requires the long, persistent and laborious effort of a whole community. It is unfortunate that the qualities in public men that serve to rouse a people to revolt, are not those that are needed in the more difficult period of construction that must follow after the rascals have been turned out. In great popular uprisings it hardly ever occurs that the men who have been most impetuous in the attack on wrong entrenched in power, have been found



the best to take charge of the *reformation* that should follow, and thus it often happens that men whom a community have delighted to reward with posts of honor and responsibility, have proved unfit. In periods of excitement the public eye is taken by those who make themselves conspicuous simply by their vehemence, and lack of wise and conscientious reserve. It is childish to expect that such men, when placed in positions of responsibility, requiring exactly the opposite qualities to those they have always shown, will change their nature. The intrepid leaders of the mob which captured the Bastile made awful despots when placed in power by their enthusiastic followers, who overlooked the wise and careful men who might have guided France into the ways of peace.

Law and order is not a matter of laws and orders, but of obedience, and personal character and public sentiment. True reform must come from the quickening of the public conscience, with a determination on the part of each to pluck out the beam from his own eye before sending a policeman to extract the mote from his neighbor's with a club.

Do not think from what I have said that I despair of reform and progress. On the contrary, I see in every uprising of the people a wave that swells as in a rising tide higher than the preceding, and after it subsides, leaves the level higher than before. In the education and elevation of the masses, in the amelioration of morals, manners and modes of life, and the growing freedom of government everywhere, in the advancement of the arts and sciences, and in the wonderful progress we are making in the control of natural forces and the utilization of natural resources, we may see the promise of the day when man with the mastery of himself shall at length have achieved the subjugation of the earth.

MORE CHEERS FOR MR. GOFF.

President Williams then said: The Mayor of Brooklyn

writes me, and tells me personally in an interview, that owing to the great strain upon him during the past few weeks, so much of his time has been occupied that he is unable to be present with us to-night. As an offset to that I have the pleasure of telling you—I am not going to call upon him just now—that a distinguished gentleman of New York was invited to be present at this banquet. He could not tell us in time to permit the use of his name that it would suit his convenience to be here to-night, but to-day he informed us that he would be glad to be here, and we have with us to-night, Mr. Goff. [Cheers and applause.]

The President then continued: I have here several letters of regret from gentlemen well known to all of you—the president of the New England Hardware Dealers' Association, Samuel H. Thompson; the president of the Heavy Hardware Jobbers' Association, S. D. Kimbark, and the president of the New England Jobbers' Assooiation, Ed-

Digitized by Google

win L. Haley. I have also one letter which I desire to read, from a gentleman who occupies the most influential position in the Hardware trade in this country; who has for several years been honored by being elected to the presidency of the local association with which he is connected, and who has recently been honored by an election to the presidency of the newly-formed National Jobbers' Association, our esteemed, and I will add much loved friend, Mr. William W. Supplee [applause], who writes:

MR. SUPPLEE'S LETTER.

Supplee Hardware Co., Philadelphia, Jan. —, 1895.

Dear Sir: Your letter extending an invitation to be present at the next Annual Dinner of the New York Hardware Club, January 31st, and at the same time asking me to favor the club with some remarks on that occasion, was answered January 13th, asking to defer a positive answer for a few days, giving my reasons for the request.

I now regret to say it will be impossible for me to be present. There are two important engagemants from which I cannot be excused. No one can possibly regret more than myself my inability to be present.

Extending beyond the pleasure of meeting old acquaintances and friends, and beyond the personal enjoyment of the occasion, stands pre-eminent a duty as president of the National Hardware Association of the United States, and as president of the Hardware Merchants' & Manufacturers' Association of Philadelphia. This, coupled with the desire to do all in my power to promote more friendly, social and business relations between the trade, renders the regret that I am now obliged to tender—more difficult to write. With kind regards, I am, yours truly,

WILLIAM W. SUPPLEE.

IN HONOR OF MAHLON J. WOODRUFF.

The presiding officer continued: I have also a letter of which I find it difficult to make a proper presentation to you, because of the emotion it awakens in me, and which it will arouse, I know, in you. It is a letter from a business associate of a gentleman whose name appears upon the list of guests here seated upon this platform. He writes that owing to the very serious illness of his associate he is unable to be present. The gentleman to whom I refer is our very esteemed friend, Mahlon J. Woodruff. He is now lying upon a bed of illness. I ask you to join me in drinking to his recovery, with the fervent wish, which I know is now in the breast of every member of this company, that we may soon see him in his accustomed place.

The toast was drunk in silence, the entire company standing.

The next number upon the programme, a bass solo by Ericsson F. Bushnell, was received with unmistakable marks of favor. It was "The Friar of Orders Gray;" and it is needless to say that it was presented in a magnificent manner. In response to the continued demands for an encore, Mr. Bushnell gave, by special request, the old German drinking song, "Down Deep Within a Cellar."

In presenting Timothy L. Woodruff, of the Maltine Co., New York, but a resident of Brooklyn, who was down for response to the toast, "A Brooklyn View of the Greater New York," the toastmaster introduced him as "A fellow member and a Brooklynite, who illustrates, in his own charming personality, some of the advantages that would accrue to New York by a union with Brooklyn."

Mr. Woodruff spoke as follows:

MR. WOODRUFF ON "THE GREATER NEW YORK."

MR. PRESIDENT AND GENTLEMEN: Notwithstanding the fact that I have partaken of a most excellent dinner, and have appropriated my share of the concomitants we all enjoy so much, the question with me is not "Where am I at?" but "Why am I here?"

I am neither a manufacturer nor a handler of Hardware;

I am not an after-dinner speaker by profession, nor do I reside in the city of New York. The first of these three conditions may readily pass as a sufficient reason for the last, and clearly explains why I live, as the toast assigned me would indicate, in Brooklyn. For there, in every respect save taxes and the cost of a burial plot in Greenwood, all the economics and virtues of life are daily practiced—even involuntarily, for there are no opportunities: no temptations. Indeed we have had to save our car fares recently at the expense of a large increase in taxes, to defray the cost of teaching us how to be still more economical.

How fortunate for us that we have an economical and wise administration, and how hard it must bear upon the mayor and his commissioners to have to spend the money, so carefully saved for ***improvements***, to protect property from ***destruction***. Great credit is due Mayor Schieren for the unusual efforts he made to bring about peace, and failing therein to restore order and suppress violence.

As I have said, I am not in the Hardware business. I am, therefore, not even privileged in addressing you to use the pronoun "we." In this place, a few evenings ago, General Porter said in an address to a meeting of editors that there were only three states of man when the pronoun "we" was permissable—a crowned head, an editor, and the man with a tape worm. Under these circumstances, I should have politely declined your committee's very kind invitation to respond to a toast this evening, had I not reflected that it would afford me a chance to express, in behalf of many others as well as myself who are not Hardwaremen, our sincere appreciation of the opportunity offered by the Hardware Club to spend the mid-day hour and partake of the mid-day meal amid surroundings which are unexceptional, and in company which is altogether delightful.

One strong and substantial personality constitutes a link between the Hardware Club and Hardware trade of New York, and the settlement to which I have referred across the river, where you can ride in a trolley car all by yourself, with a policeman on each side of you, all for five cents, and bricks thrown in. You at present command his energies and his devotion, but we, in Brooklyn, by tendering him all the honors from club presidencies to the chief magistracy of the city, have put him under such a heap of obligation that he must respond favorably to our call when his duties as your president are performed, and then devote some of his splendid abilities to our interests.

But I revert to my toast, as the time I feel at liberty to occupy this evening must be short indeed. "A Brooklyn View of the Greater New York."

Now, little was known of Brooklyn by New Yorkers till it became noised about that Father Knickerbocker was mashed on her: so little, indeed, that the best information a very well-informed citizen of New York could give his inquiring friend concerning its location was: "Why, don't you remember, it is that station we passed en route to Coney Island." I think this, however, was before the Bridge was opened, for then it became quite the thing for New Yorkers to wander out on the promenade just once,

TIMOTHY L. WOODRUFF.

you know, to see where Steve Brodie jumped from, or to discover how a cable car was run without horses; but I never heard of one of these investigators who ever succeeded in finding his way unassisted from the ill-conditioned terminus at the other end, into the city this magnificent highway was intended to penetrate.

Had he done so, and gone about among its people, and it was safe to go about then, before the trollies commenced their career of destruction to life and limb, or before the violent strikers took forcible possession of the town, he would have found, if not public spirit and civic pride and the radical progressiveness of the age, at least a remarkably homogenous, home-loving and conservative citizenship.

Brooklyn's characteristics have always been of a slow-to-action, retiring nature, partaking much of the characteristics which constitute the chief attractiveness of the gentler sex, and it is, therefore, not to be wondered at that Father Knickerbocker, won by these gracious qualities, became ardent in his wooing, or that Brooklyn, true to the instincts of her sex, met his advances coyly and with some apparent hesitation.

The press of New York has shouted loudly in behalf of

Digitized by Google

the suit of Old Knickerbocker, while the press of Brooklyn, in behalf of the timid maiden, has inveighed softly but determinedly against an anticipated elopement. It is, however, shrewdly suspected among the friends of these high contracting parties, that the attitude of the Brooklyn press is actuated by a fear that the consummation of this marriage will deprive its owners and its editors of the lass' smiles and favors which they are now sordidly converting into unsentimental cash.

Brooklyn has repudiated the guardianship of the press. Last November she accepted with firmness, not unmixed, however, with proper reserve, the overtures of New York, and dedicated anew at the ballot box the faith she plighted a dozen years ago, when we celebrated the completion of that grand monument of engineering and constructive skill which demonstrated how easily God's creatures could bring together, over the waters of the earth, the lands which God had ordained on the one side for the habitation, and on the other for the workshop of men.

Two-thirds of the business men who spend their sleeping hours in Brooklyn devote the energies of their waking hours to the material prosperity of New York. Office, store and warehouse rents are vastly increased thereby, and the dependent value of downtown real estate and corporate taxable property is nearly doubled. This explains why New York is far below her debt limit and at liberty to incur obligations for all needed improvements, and it accounts for the fact that on an assessed valuation of fifty per cent. the tax rate is one per cent. less than in Brooklyn, where the debt limit has been already reached and the most imperative needs of the people cannot be heeded.

I pay $7,500 rent for a building in New York on which the city collects annually perhaps $1,000. As the treasury of Brooklyn does not receive one dollar of this sum, it is necessary to tax my house $700, while my friend's house in New York, of equal value, pays an annual tax of $350. Is this fair? No one claims it is equitable, and New York has declared by a majority of 30,000 that she is willing to enter into an adjustment.

Why is public spirit in both of these municipalities at so low an ebb? Plainly because of an unfortunate dissipation of interests. If two-thirds of the residents of one city spend all the *business* hours of the day in the other city, and one-third of the business men of that city spend all of the *domestic* hours of the day in the other city, how can you expect that concentration of force and action which is denominated public spirit?

It is asked: "What is New York to gain to compensate her for an increase of taxes and other added burdens of government?" Does a man usually permit the question of cost of living to interfere with his becoming the head of a family? Why should New York permit a small annual expenditure to cost her the loss of trade and prestige which must inevitably follow relegation from her present proud position as the first of American cities?

> "Trade's proud empire hastes to swift decay;
> Westward the course of empire takes its way."

In closing, I beg to assure Mr. McLean and his colleagues of the Brooklyn press, that there is no fear of an elopement. There will, however, be a duly arranged and properly performed marriage, and there is going to be no divorce. The union is too natural; already "the two hearts beat as one;" the lives commingle, and the great physical arteries that unite them throb with every heart-beat of them both.

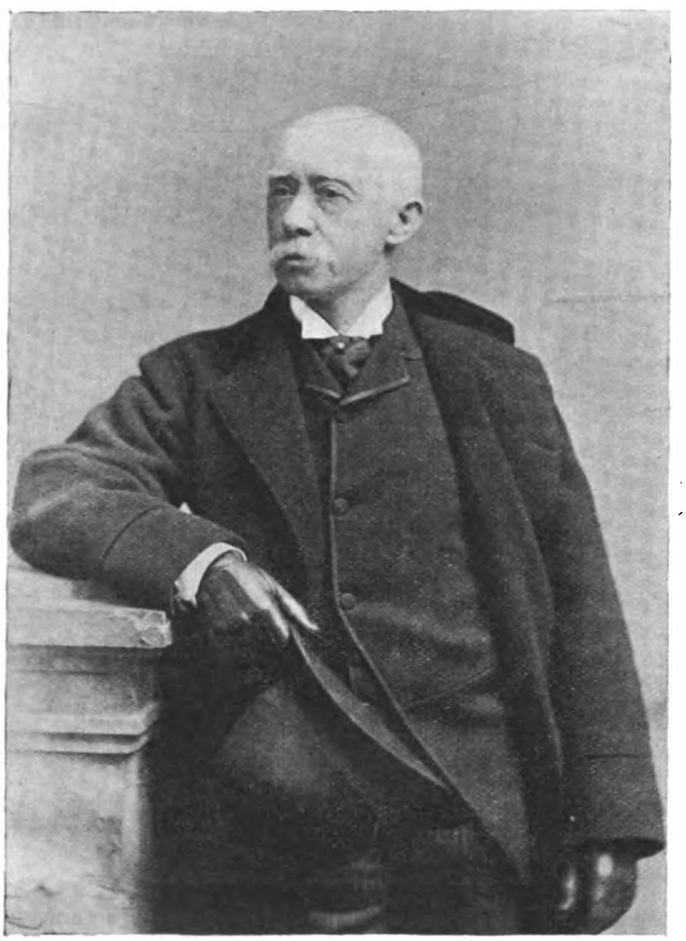
It was last fall a case of "The Lady or the Tiger." But the tiger, thank God, is no more. He has been buried, face downward, so that the harder he scratches the sooner he will reach his ultimate destination. And when the lady is asked the final question, "for better or for worse," without a trace of the hesitation she has thus far simulated so admirably, her response will be heard in all the places of the earth, and it will make this the Empire City of the World!

At the conclusion of Mr. Woodruff's address, which was frequently interrupted by cheers and laughter, the presiding officer said: It has been said of the present Democratic Congress that it possesses at least one virtue, though a negative one—it is unequal to the task of carrying out all of its bad intentions. I haven't the remotest idea whether our "friend from Cleveland" is going to sing a song, tell a story or make a speech. He is past-master in each, and does all three equally well; and I have personal knowledge that he is unequal to the task of exhausting his powers of entertainment in one evening. I have pleasure in presenting a prince of good fellows and king among men, Stewart H. Chisholm, of Cleveland.

Mr. Chisholm, the president of the H. P. Nail Co., spoke as follows:

MR. CHISHOLM ON CLEVELAND, OHIO.

Gentlemen: I think that if I had one of John Griffith's punches I could get along better. (Laughter.) The president here this evening started out typifying himself as a



ALFRED D. CLINCH, CHAIRMAN OF DINNER COMMITTEE.

headlight. As I look around upon so many intelligent faces, it makes me feel light-headed. (Laughter.) And as the gentleman who has just preceded me quoted, "*Where am I at?*" I feel, as I look around upon you again, *Where is my hat?* (Laughter.) The president of this Club wrote me some two weeks ago, and gave me a cordial invitation to come to this dinner, and answer to the toast of "A Manufacturer of the West." I immediately replied, and said, "Mr. Williams, I come with the distinct understanding that I will not be called upon to speak." But he is president of your Club, and I ought to have known what little dependence we can place upon presidents these times. (Laughter and applause.) I saw Mr. Williams this afternoon, and he announced to me that he had my name down on the programme to answer to the toast, "A Friend from Cleveland." I did not know. I thought, perhaps, I had better start out and tell you that it is from Cleveland, Ohio. (Laughter.)

I have never in my life made a speech; but I do sometimes tell a story. And to illustrate that condition I will tell a story. It is the custom, or was the custom years ago, in Scotland not to have any musical instrument in the

Digitized by Google

church. In fact, it was considered a sin to have an organ or any musical instrument to lead the singing. They had a gentleman who started the hymns after the preacher gave them out, and he was termed the precentor. (But before I go any further I don't want the reporters to take this down, because I tell this every time I speak. I don't want to get this in the papers, because there are still seven or eight people who don't know the story.) Well, the position of the precentor was down before the pulpit, and they had very high pulpits. The parson would give out the hymn, expecting the precentor to start it. The parson gave the hymn; but there was no precentor there. He looked over the top of the pulpit, and saw what was the matter, and then looked around the church, and asked a brother to start it. A brother looked up in the gallery, spied someone, and said, "Well, brother, I canna sing, mesel' but there is Joke White up yonder in the gallery, I dinna ken whether he is a singer or no, but he is as good a whistler as ever cocked

PETER McCARTEE, CHAIRMAN RECEPTION COMMITTEE.

a lip." Well, that's my case. I can't make a speech; but I might tell a story. He could not sing; but he could whistle.

In the words of a French gentleman from Cork, who is a member of your council here, when called upon to speak, "I will say that I certainly flatter myself with this opportunity that ye gies me in tellin' ye what I don't know." (Laughter.) I think it is well for the manufacturer to meet with his customers as the Good Book infers "it is hard to believe not having seen." Now that you have seen me you can bet on what I tell you in reference to our lines. You speak of Cleveland, Mr. Williams—no doubt many of you—speak of Cleveland being in the west. We do not consider it so out there. I presume most of you gentlemen have been to Cleveland. It is a beautiful city. There have been some important men come from Ohio. You have all read that in the papers; and I am pleased to announce to you the fact that all the presidents this Club has ever had were, or are, connected with manufacturing concerns of Cleveland, Ohio. As I said, great men have come from Ohio, and there is one now who, if let alone, will settle the financial policy of this country for the present time in a better way than any person we know of. And, as the little boy said, "He kin, if anybody kin," he did it once and he can do it again—the Hon. John Sherman. (Applause.) For the benefit of some who don't know very much about Cleveland, I have put down here a few statistics, to give you an idea of the extent of the manufacturing in Cleveland. I take this from the census of 1890, and you can judge of the increase since then; at least 100 per cent.

Number of manufacturing establishments, 2,065. Number of hands employed, 53,449. Total wages paid in a year, $30,423,000. Capital invested, $53,974,000. Cost of material, $56,321,000. Value of product, $98,926,000. Railroads centreing in Cleveland operate 5,429 miles. Total tonnage moved from Cleveland in 1893, 4,000,000 tons. There are more ships built in Cleveland than anywhere else in the United States, and only surpassed by the Clyde, in Scotland. In 1860 Cleveland's population was 44,000; today upwards of 360,000, the largest city in Ohio and the tenth city in population in the United States. I will say also for Cleveland that there are facilities for manufacturing the following articles in larger quantities not only than any other city in the United States, but any other city in the whole world, and these are: steel rods, steel wire, steel wire nails—and chewing gum. (Laughter.) We had a meeting of the United States jobbers in Cleveland several weeks ago. A number of them were shown around the different factories there, and they were surprised to find the number of articles which are handled in your business manufactured in Cleveland; and I will run over them: axes, bolts, bars, carriage hardware, dynamite, door-springs, gas-fixtures, hammers, hinges, locks, lead pipe, mechanical rubber goods, mounted grindstones, stoves and ranges, sleigh-runners, sashes, doors and blinds, turn buckles, etc., and many other things that you gentlemen do not handle, too numerous to mention. I think I have told you, in round figures, about Cleveland as well as I can. I wish to extend a hearty welcome to any that come to Cleveland, and the story about the latch-string being always on the outside is current with us.

At the conclusion of Mr. Chisholm's speech, the president arose and introduced Recorder Goff in these words: It is a better New York in which we meet to-night than that in which we held our meeting three years ago, and for this the next speaker is, to a large degree responsible. I wanted him to come here and meet you, because some of you will doubtless come before him in his magisterial capacity, and a personal knowledge that you are not as bad as your crimes might indicate, may help to mitigate the severity of his sentences. Our friend, Recorder Goff.

Mr. Goff was received with cheers and the waiving of napkins, and when the excitement had quieted, spoke as follows:

THE SPEECH OF RECORDER GOFF.

Mr. Chairman and guests, members of the Hardware Club: It was only when somewhat advanced in to-day's hours I was able to determine for a certainty I would have the pleasure of being your guest to-night. I must state now, for fear I should forget it, that it would have been a deplorable misfortune for me had it been otherwise than that I should have been here to-night; and leading somewhat of a busy life for some time back, I have not had any opportunity either to conceive ideas or to collect thoughts on the subject of Hardware. I have been a worker and a student all my life. I have always been sitting at the feet of Gamaliel, picking up knowledge. So I find myself here to-night sitting at the feet of Gamaliel. I find among the things that I must add to my storehouse of information, there is one centual fact strikes me—that if any one had told me the wide range that the Hardware

Digitized by Google

Trade has taken, I would not have believed it. I would not, Mr. President, I could not have conceived the wide range of subjects that you have taken in, that you include in what you term euphoniously your related trades, when you start with the Garden of Eden and close with the last speaker, with the manufacturers in Cleveland, Ohio.

So varied has been our entertainment, so interesting have been the discourses, that it would be a futile effort on my part to refer even to them, and, as I told our genial president here to-night, that I could only hope for a word of expression to you from some stray thoughts picked up from the preceding speakers, and I am reminded as I think of my friend who says that he comes from the city of Cleveland, and of our friend from the City of Peace, of what I thought before—how thankful we New Yorkers ought to be that we are even noticed in this remote corner of the world. Our genial friend said there never was a president of this Hardware Club, and never would be a president of this Hardware Club elected that was not or would be not in some way connected with the Hardware trade of Cleveland. Why, gentlemen, I think it is an article of our national faith that there never was a President of the United States, past, present or future, that did not come from Ohio. And I never knew an Ohio man yet that, with all his modesty, with that characteristic humility which we have all learned to appreciate in the past ten or fifteen years, who did not go out into his back yard every morning and put his ear down to the ground and listen for his country's call. So we are glad to hear that, when the sinews of war are being carried from our country in ship loads, there is standing to the front an Ohio man ready to assist us. I am also proud to acknowledge the fact that right here in the city of New York we have been cosmopolitan enough to take an Ohio man and put him at the head of municipal affairs, to help and save our city. And from beautiful Cleveland, upon the shores of Lake Erie, we take a step back to the preceding scholarly and interesting speaker, Mr. Woodruff. I would have liked that, instead of an after-diner speech, it would have been a lecture. I would have liked to have sat for an hour longer listening to Mr. Woodruff, because in his speech there were unfolded the beauties and virtues of Brooklyn on one hand and the hidden vices of New York on the other. Brooklyn, beautiful Brooklyn! Brooklyn, the pure; Brooklyn, the religious; Brooklyn, the silent. Brooklyn will some time, though now standing coyly away, will some time come to the arms of old Father Knickerbocker. Let us live in hopes that that day is not far distant. (Applause.) Our friend Woodruff, in calling us Father Knickerbocker, would shortly lead us to understand that it was a case of December trying to lead May to the nuptial altar. But there is a good deal of youth in Father Knickerbocker yet. I have heard a good deal of discussion about the union between New York and Brooklyn, but upon my word I have never understood its full force before. Father Knickerbocker has sometimes been pretty badly used for his desire to annex the beautiful Brooklyn suburb. Well, I suppose there may be an excuse for that. It may occur to us that New Yorkers are business men, if anything, and that, knowing that most of them will have to rest their weary, worn-out bones sometime in Brooklyn, he would like to take an interest in her real estate while living (laughter) and that in that city of magnificent silence and extensive cemeteries (laughter) he might at least call it his own during life. But that is not the real reason. I find from Mr. Woodruff's keen and humorous satire upon the situation that the real reason is this: I have often wandered about the crowds of men standing about the Brooklyn Bridge since it is in operation and before that at Fulton Ferry. And I have seen crowds of beautiful, well-dressed women coming over to New York, particularly on bargain days. I have seen the eyes of New York following them, and no more charming, no fairer women ever graced God's footstool than the fair ones of Brooklyn. And I would fain ask any Brooklyn editor under these circumstances, Can we New Yorkers be blamed for trying to embrace Brooklyn? (Laughter and applause.) Now, I have heard a great many Brooklyn men put forth their objections to union with New York, but the real one has never been touched upon, in my opinion, and it is that, if New York were really united to Brooklyn, the excuses and the delicately polished lies of Brooklyn husbands would no longer find warrant in the minds of their trusting wives. (Laughter.) I have noticed that when the hour of adjournment was mentioned I heard a number of protests. I will venture to say that every protest came from a Brooklyn throat. (Laughter.) What on earth would become of the Brooklyn men if they did not have the excuse that they would have to attend to business in New York? Hence, if we unite with Brooklyn, why of course that excuse will not lie any longer. Well, Mr. Woodruff has given us an interesting illustration of the taxes. He has told us that the Brooklyn men spend two-thirds of their time in New York on business, and only one-third of their time in domestic pursuits in Brooklyn. (Laughter.) Well, two-thirds means, according to King Alfred's classification, sixteen hours out of the twenty-four. And if you Hardwaremen will deduct how many hours you give to business out of sixteen hours, I think you can very, very closely arrive at the number of extra hours that the hard-worked Brooklyn man gives to his avocations in New York. (Laughter.) Nevertheless this fact remains, referring to the poetical and scholarly closing of Mr. Woodruff, that nature's laws cannot be diverted even by selfish Brooklyn husbands, that nature's laws are inevitable of fulfilment sooner or later, and we in New York, almost bereft of domestic life, we turn our eyes to the rising sun of the East and say: "We want more religion, more domestic life, more beauty, more rest, more tranquility, and we will take you to our arms, Brooklyn, and that is what nature has designed us to do and what is the inevitable result of our connection." (Applause.) And assuming that to be our manifest destiny, when that destiny is fulfiled we hope some time to meet our friend from Cleveland, and that we will then give him the suggestion that, with a Greater New York here we will be a little more entitled to his sympathy and consideration from the great and bounding West. (Applause.) How to make our city better,

RECORDER JOHN W. GOFF.

Digitized by Google

whether Brooklyn or New York? I see there was a sentiment assigned to Mayor Schieren to-night, political principles, I believe ——.

The President—Principle in Politics.

Mr. Goff—Principle in politics. That term should be as easily and as thoroughly understood on one side of the river as on the other. It has no reference to politics. It has reference to the affairs of our nation, of our state, of our city. There should be no division among honest men of principle. Parties should be the guards of principle and not principles the slaves of parties. There is a mutual compact, or should be a mutual compact, between every partisan and his party, and that compact rests upon the corner-stone, that the man of principle says to his party, "I am with you, and you shall have my fealty and my loyalty as long as you carry out the principles that I believe in; but the moment that you betray those principles, then the compact is broken and I have the right to leave you." (Applause.) Therein lies the true kernel of citizenship—patriotism before party (great applause), country before politicians in the lowest sense of the word. (Applause.)

WILLIAM H. WILLIAMS, PRESIDENT.

And if there be one agency more powerful than another to keep in check the rioting, successful politician, it is the fact that, like a sword of Damocles hanging over his head, it would be the action of independent men, governed by principle and not by party alone. (Applause.)

You have found that in this city of New York the affairs of the greatest municipality on this continent have been made the foot-ball of parties. The game of battledore and shuttlecock has been played by the politicians of both parties, and the great and varied interests of our great metropolis have been used as a shuttlecock by the politicians of both parties. One year the Democrats are in the majority in Albany and they say, "We want all the plums in the municipal pie." The other year the Republicans are in the majority, and want all the plums in the municipal pie. And between the two, our taxes have been rolled up. Our per capita tax is greater than any city in Europe, not even excepting Paris, with its war burden, and we have the worst municipal service of any city in America. Now, take one feature of our municipality, for instance, and compare it with any other sea-board city in the world. In the city of Liverpool they have the most extensive docks in the world.

Out of the revenue obtained from those docks the municipality of Liverpool has been enabled for a number of years to hold their city free from municipal taxation. And out of the surplus they have been enabled to build the most magnificent town hall in the world. When old Governor Dorgan, over two hundred years ago, gave this city a charter, the city of New York started in with the most magnificent birthright of any city in the world. What is the difference to-day? Our docks are not made to realize, to return to us any revenue, but are a source of expense and of charges of corruption from year to year. So that, in the city of Liverpool, with a tide-fall of twenty feet, they are enabled to build the finest docks in the world and build their town hall free, while we in the city of New York are deep in debt. Why is this? Because there is a total lack of principle in politics, the subject assigned to Mayor Schieren to-night. It has been a system of grab, appealing to the prejudices of citizens, to their partisan feelings, riding into power, rushing into sudden wealth. That is why in the city of New York to-day—never mind, the facts and figures prove it—we have the worst governed city in the world. We might as well keep our eyes open and recognize that fact, that we will continue to be so, that this great city favored by nature as much as any city in the world has been favored by it, that we will continue to be saddled with taxation, robbed and plundered, until all men that put principle above party come together and say: "We must conduct our municipal affairs upon the basis that business is conducted." I will not question why it is, gentlemen of the Hardware trade, that a Republican in national politics and a Democrat in national politics cannot come together in relation to their affairs in the city of New York, and meet as citizens and not as partisans, and discuss and act upon the affairs of their home city with the same impartiality and disinterestedness, with the same impartiality, that you gentlemen meet together in your clubs and discuss your business affairs. And when that great mass of men who have made our city what it is, when they can put aside mere partisan prejudices, when they can meet each other and say: "Is it for your benefit that you should be taxed simply to please Republican politicians or to satisfy Democratic politicians? But we, as business men, it is to our interest to reduce our taxes, and therefore we will join hand to hand and shoulder to shoulder for a principle and maintain a government that is capable and honest for ourselves." Your president has said here to-night in his opening address that he hoped for the work of reform. He did not speak like a political Cassandra that looked into the future and saw nothing but clouds and despair. He spoke, as he said, rather as an optimist, and it is better to take that view than that of the pessimist. You Brooklyn men, you New York men, and all interested in business prosperity, must depend to a large extent on political honesty. You cannot have respect at home or prosperity abroad if you have not political honesty. If it be known that our political affairs are being dishonestly handled and managed, it must necessarily affect your business enterprises. You business men understand that better than I do. But the business returns, the statistics, show that. And if you take that optimistic view which is the better view, the only way for you to carry that view into practice is for you business men not to consider that it is a disreputable thing for you to take part in politics. If you business men neglect your political duties, if you leave the politics of our city to be controlled and manipulated by the lowest, the most irresponsible, the most ignorant of our population, who are to blame? You are to blame and not they. I maintain that the coal-heaver who does not stay home on election day and votes according to his light, is better in the eyes of the government than the business man who goes away from the city on election day.

Digitized by Google

(Applause). Revolutions never go backward in the ordinary course of human affairs. If they do go backward, civilization goes backward.

When the vandals of the north swept over the Roman empire, humanity went back almost into barbarism. The civilization finished and men became subject to savages. Civilization was turned back a thousand years. The dark ages, called the Middle Ages, followed. Learning went out and knowledge. The arts were forgotten, save by a few cloistered monks. Letters were not known of. Freedom was borne back by slavery. And that is why civilization went backward, and the same result will follow here. Having taken a great step forward for government, and honest government, it remains for this people to see that a great revolution backward does not take place and our populations are not placed under the wheels of the chariot of those who seek party gain and party conquest. I thank you gentlemen. I express to you again hearty thanks for your greeting. I can only say that I personally have felt myself but an humble instrument in the great work in which our people have been engaged, and the greatest ambition of my life and the greatest glory that I have ever achieved is to continue to express the voice of the honest, upright citizen, irrespective of party in the city of New York (applause).

The toast-master then said: At our last banquet, in introducing a clerical friend, I took occasion to say that probably the members of no trade in Christendom stood less in need of the admonitions of the clergy than that to which we belong. In view of the business depression of the past two years—I may perhaps say, with equal truth, that there are a few lines of business in which those engaged in them stand more in need of the consolations of the clergy than ours. And no one is more competent to extend that consolation than the distinguished and eloquent divine who is our guest to-night. I am happy to present Rev. Henry M. Sanders, D.D.

The toast, "Swords and Ploughshares," was the one assigned to Rev. Henry M. Sanders, D. D., pastor of the Madison Avenue Baptist Church, upon which he spoke as follows:

DR. SANDERS' ADDRESS.

MR. PRESIDENT AND GENTLEMEN: I fear that if you carry out your programme and adjourn at eleven o'clock some of us who live in the "shruburbs," as Mrs. Partington says, or rather the "outsquirts," of Brooklyn will be obliged to do as we used to do in college, when we came home very late; put up ten on one side of the door and eleven the other, so that we could say we had always come in between ten and eleven. I am sure I can say, with a great deal of heartiness and sincerity, the conventional thing—that I am very glad to meet you, to enjoy your hospitality, at this, not hard-tack dinner, but Hardware dinner. You certainly are not in the condition in which a fellow classmate of mine, in the theological seminary, was, when he went up to Blackwell's Island to preach to the convicts, when they came in 600 strong, he began his address by saying, "My dear friends, I am glad to see so many of you here" (Laughter.) When we chaffed him upon this, upon the *faux pas* that he had made, he retorted by saying that he flattered himself that his address had met with a success that we in the course of our ministry had never achieved, because every man there was under conviction. (Laughter.) Because they were in the penitentiary, I suppose he thought they were penitential. (Laughter.) I am sure I do not know why I have been asked to speak to this Club, representing so honorable a department of honest industry, for I certainly know nothing about Hardware. I won't follow out but very little the suggestion that you know nothing about religion, in view of what your president has said, but I will follow it out by saying that you don't know anything about a sermon, about the only thing which I do know how to make. In which case I find myself between the devil and the deep sea. I won't undertake to say which is which. The girl with the false hair, you know, could not undertake to say which was switch. The only connection between the Hardware and metal trades and the church, that I can see, is that of the minister who said to the sexton, when the plate came back filled with pennies, "Alexander the coppersmith hath done me much harm." (Laughter.)

I am sure I don't know why I have been asked to speak to you to-night. You know women's lunches have been described as gabble, gobble and giggle. In one of our papers recently a monthly missionary meeting became, by a printer's mistake, a mouthly missionary meeting. I am sure that is the justification you have for the addresses you have on such an occasion as this. I asked what I was expected to say, and was told it must be very light and frivolous. And then, when I was waited upon by a representative of the press, who said that the other speakers had all committed their remarks to writing, and that they wanted my photograph, I became frightened. (Laughter.) I was in the condition of the brother of the church who was very sick, and went round to his congregation, "Brethren, pray for me, and send me Puck and Judge." But your

E. BISSELL, CHAIRMAN TABLE A.

committee have very kindly given me a text. It was not one of my own asking, but a day or two ago was sent to me. I cannot promise that I will stick to it. Perhaps I will do as the minister said of his text, "I will go up to it and then I will go around it, and then I will go away from it." Old Father Taylor, of Boston, said that if the text had the small-pox the sermon would not catch it. (Laughter.) I fear that that will be somewhat the condition of my address to-night. As to the topic assigned to me, I suppose the words were not chosen for any other reason more proper for this occasion than that they are the utensils with which you have more to do and with which you are more familiar. But I suggest a thought or two, which may not be particularly "shoppy," from your trade point of view, but which concerns us all whether in Hardware or soft ware.

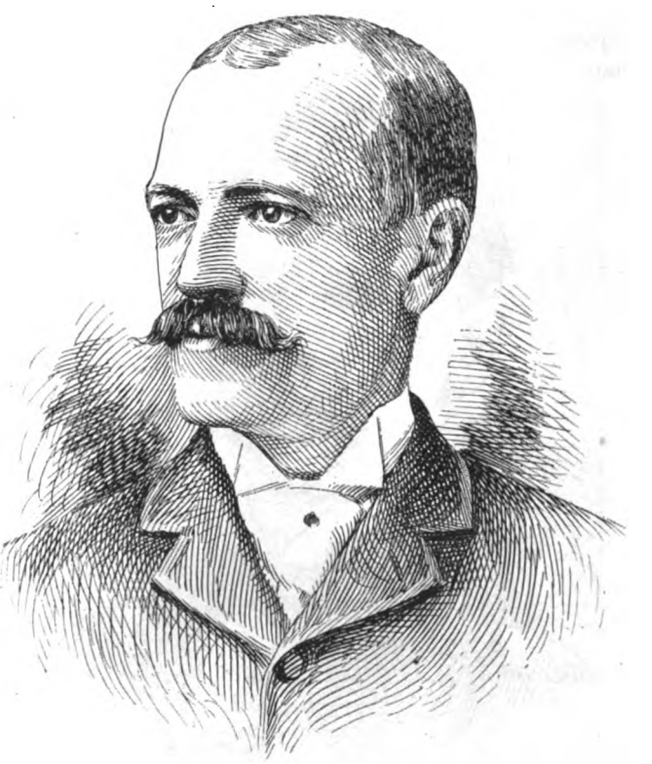
The topic which has been assigned me is "Swords and Plowshares." I suppose that the words were not chosen for any reason more appropriate to this occasion than that they are the utensils with which, among others, you have to do. But I cheerfully take them as suggestions for a thought or two which will not be particularly "shoppy" from your trade point of view, but which concerns us all whether in Hardware or soft wear, in dry goods or wet

Digitized by Google

goods. Swords and Plowshares—I find these words several times in the Good Book I am wont to expound; in Isaiah, Micah and Joel, using the expression in the same sense. "The nations shall beat their swords into plowshares, and their spears into pruning hooks;" "nation shall not lift up a sword against nation, neither shall they learn war any more but they shall sit every man under his vine and under his fig tree, and none shall make them afraid." That sounds very irenic and peaceful, and it is, but when we come to inquire at what period that idyllic state of affairs is to obtain, we find that it is "the last day." Now I do not propose—because I do not pretend to be able to say just what time that refers to; but I am sure that while we might think that we are people upon whom the ends of the world have come and some of our gilded youth boast of being a "*fin de siecle*" community, we hardly come to the rest of the description—as a time when everyone walks in the ways of the Lord. You need have no fear, then, that the department of your industry which is engaged in fabricating instruments of warfare, will be absorbed in that which manufactures implements of agriculture; that swords shall be beaten into plowshares and spears into pruning hooks. That will doubtless come ultimately, but not in your time or mine. You may think it ill becomes one who is a minister of Him who was called a "Prince of Peace,"

STEWART H. CHISHOLM.

of whom was said, "He shall guide our feet into ways of Peace;" at whose advent angels sang "Peace on earth, good will among men;" who said "Blessed are the peacemakers," and who told his disciples to have peace one with another; I say it may seem rather incongruous that I should advocate the belligerent rather than the peaceful, but I remember that He whose I am and whom I serve, also said that He came not only to send peace on earth, but a sword; to set a man at variance against his father, and daughter against her mother, and daughter-in-law against mother-in-law—which latter consideration it would seem a hard thing to do. Do these words mean He came to stir up strife and enmity? To turn every man into an Ishmaelite, with his hand against his neighbor, as though there weren't divisions enough already and one thousand swords flashing in the air? Is there any place more sacred than our homes? And yet everywhere He is going to stir up discord and contention and set all its members by the ears. So that a man's worst foes shall be found where he might naturally look for his best friends. But we know the meaning, and may interpret such language. It is by contrasting means with end, results with processes. The end is peace and the means conflict. The finished product is pacification, and the method by which it has been brought about is struggle. The sword will be beaten into the plowshare, but only after it has beaten down all cruelty and crime and injustice—after it has been used in holy warfare. I am sure we must all depreciate war. It is one of the direst of calamities. Well may the litany of the English Church pray every Sunday "to be saved from lightning and tempests, plague, pestilence, from battle and murder and sudden death. Good Lord, deliver us!" War is a hideous thing. We cannot exaggerate its horrors. In and of itself it is butchery, and not of soulless animals, but of men. It means death, destruction and untold loss and suffering. It is difficult to find anything worse—even the words "hellish" and "Satanic" seem too weak to describe it and its consequences. But bad as it is, there are some things worse, and when war or any one of these other worse things is the only alternative, war, with all its abominations, is right, and with all its horrors, is good. It is, as said, death and destruction; but death only to body, and destruction only to property. Life is sweet and property is good, but even they can be too dearly kept. "What shall it profit a man if he gain the whole world and lose his own soul?" Souls may be lost without being sent to perdition—reaching perdition possibly at last—but being lost some time before. Martyrs have preferred death to apostasy; and there are some things to be feared more than the giving on the rack of the life physical. War, then, is not always wrong. It may be just, and right, and necessary. It is only forcible government, physical force sustaining moral right. The magistrate is not to bear sword in vain. Right and order are more precious than human life, and to maintain the one it sometimes may be necessary to sacrifice the other. War is nothing more or less than capital punishment on a large scale—the only difference being that on a scaffold there is but one executioner, while on the battlefield there are many. In either case it is organized society that strikes on the scaffold with the single hand of civil justice, and on the battlefield with many mailed hands of war. But sheriff or soldier, it matters not, they are equally legitimate. The sword, then, represents conflict, and stands for war, and can hardly yet be molten and recast into plowshares.



Offenses have not yet ceased between man and man; wrong, oppression, and cruelty have not yet been put down; and until that happy state arises, the weapon of strife cannot give way to the implement of industry. We want peace, but peace with honor. Our religion, our civil institutions, our industrial and social welfare, all demand that so long as cruelty, injustice and oppression exist, so long that sword must be out of its scabbard and brandishing about. Our high ideals expressed in our civilization are restless as well as resistless agitators. They turn and overturn until right be established on earth. Our ideal civilization believes in no compromise with error or wrong. It thinks nothing settled until it is settled right. It does not propose to remain quiescent while an injustice exists or wrong needs rectification. It is not the weak and maudling thing that cries, "Peace! peace!" when there is no peace, and none can be. Like the Irishman; it proposes to have peace in the family, even if it has to fight for it. We are now in the midst of great social and industrial agitation, and ferment, threatening revolution, and many are in alarm as though the foundations of society and government were dissolving, and some fear complete collapse of social order. But the revolution will reveal itself to be evolution, the rising of society into higher forms, a transient agitator, twining about a never stable equilibrium. Not only is this agitation inevitable, but it is beneficent. Why, you can't make even butter without agitation. Discontent is significant of increasing intelligence. Men must come to a perception of better conditions than the actual before they put forth their efforts for improvement. Wendell Phillips said "that the American Baby, when six months old, looks over the sides of the cradle and invents an improvement." If so it is because he feels uncomfortable, and has brains

Digitized by Google

enough to see that a change is possible and improvement is feasi le. Discontent is grief between ideal and actual. Grumbling is the music of dissatisfied toil. Why is it—with all our admitted advance, great freedom, wealth and advantages, so that the lot of the people is better than fifty years ago—that there is less contentment among wage-earners? Working men and revolutionary schemes are more rife than ever? It is because, while material progress has been made, another kind of progress has been going on, at even a more rapid rate. I mean ideal progress—progress in people's ideas of what life ought to be, and, by proper opportunity, can be. Things are worse than fifty years ago; because the distance between the ideal of life entertained and the actual condition is greater now than then. The standard of comfort has arisen with greater rapidity than means of comfort; and discontent is simply the measure of distance between the ideal and the actual. But this is not an unrelieved evil. All progress has come by the same pathway. It is the result of quickened perception, seeing need and possibility of improvement, and then feeling impulse to go to war to bring it about. Discontent is pressure that pushes on to larger attainment; and I tell you the ideal man to-day is not the snoozing African along the Congo or the lazy Neapolitan fisherman sprawled out on his wharf, but the restless, hopeful, unhappy American who sees that things can be better, and wants them better, and proposes, by the Eternal, to have them better! Civilization is simply the synonym for awakened intelligence which is conscious of needs which soon become wants, and then impulses and then achievements; and that achievement means conflict; struggle with tradition and hoary customs, vested interests, intrenched conservatism, institutional antiquity and the like. It has to fight with men who, as Douglas Jerrold said, "wouldn't look at the new moon out of respect for ancient institutions—the old one." Of course, they want things to go on as they are, because they are well off and comfortable. But such men are anti-progressive. They are brakes on wheels, not motors. They are ratchets, not the crank. Thev are all breeching, nothing of a collar; and they have to be opposed, if we would get the chariot out of the ruts, where it is stuck fast, on the high road to the millenium. That means the sword. It is the sword that has blazed the path of progress through the forest, and prepared the way for the ploughshare. Peace comes of contention. Out of conflict comes advancement. War, even hideous and horrible, becomes tolerable to him whose vision is broad enough to take in the whole field. There has been no great struggle which hasn't resulted in good. The Crusades depopulated Europe; but they checked the advance of Mohamitanism, and hastened the destruction of feudalism, and developed commerce and civilization. The French Revolution broke the spell of absolutism in government; and, despite the reactions caused by its excesses, it established the democratic principle in Europe. Our civil war, costly and bloody as it was, is seen to have been worth all its cost. Out of the sanguinary and fratricidal strife came a consolidated people, a greater love for the Union, and, in all, it stands for a more assured and influential place among the nations of the earth.

Without the shedding of blood there is no remission; no betterment is ever brought about; no uplift for a community without somebody being pinched. The onward movement of the race has been not a journey, but a march, a march of soldiers. New territories have all had to be conquered. Wiser laws, humaner institutions, enlarged liberties, assured order have all been the crimsoned trophies of war. The great military campaigns of history, all its great landmarks. Great battles have been often arbitrament of great ideas. It is no new thing for bayonets to think, and they have been thinking better and better from age to age. In the great crises of history, when the clock of the universe has been about to strike a new hour, the unseen sqadrons in the air and the unseen chariots in mountains have always been more than a match for genius in generalship, or weight of massed columns, or prodigality of ammunition, or prestige of previous achievement, when they have been set against the right. Napoleon could never understand why his army was routed at Waterloo. By all military precedent the rout should have been upon the other side. He was never surer of a victory than then. But besides the army against him on the ground there was another army against him in the air. The stars in their courses fought against him and he was vanquished.

A bad cause may be successful at the start and the good cause stunned and staggered at the first onset. But the secret and victory of the Lord are with them that fear Him. Every soldier on the field has an ally in the worshipper in the closet. Every heart blazes with the light of His countenance. Every bugle trembles with the breath of prayer,

EDWARD C. VAN GLAHN, CHAIRMAN TABLE E.

and good men thus armed are invincible. He need not await the bullets, the end is sure.

> For right is right, since God is God,
> And right the day must win.
> To doubt would be disloyalty,
> To falter would be sin.

Gentlemen of the Hardware and Metal Trades, you will have no reason to manufacture and sell fewer implements of peaceful industry, the ploughshare and the pruning hook, but we have not come to the "last days," when you can cease to produce and deal in the weapons of defensive and offensive warfare. Even if there be those who think and claim that physical force ought never to be used in the propagation of truth and rectification of evils, and who believe that our Lord forbade the use of the material blade, when He said: "Put up thy sword, they that use the sword shall perish by the sword," and "the weapons of our warfare are not carnal," it remains true, that we, whatever our vocation, or our faith, and religiously speaking, have a fight to wage against foes within and foes without. We may not wrestle against flesh and blood, we do against spiritual wickedness, and the rulers of darkness. Our religion and any religion worthy of the name must be bellicose. In its nature it must be a crusade. It must betray animosity and antagonism against everything that contradicts it that is unjust, dishonest, false and impure. Just so far as a man

Digitized by Google

is a good man, just so far he has to make a nuisance of himself in this world of ours. Jesus was a nuisance in his time. It is the nature of goodness that it irritates badness. Every virtue and its opposite are duelists, and try to kill each other. Fire must either put out water, or the water the fire. The moral and social and industrial tranquility of the world can only be obtained by the overthrow of wrong. Compromise is out of the question. The call of the hour, in all forms of our complex social life, is not for diplomats, but for soldiers; not for ambassadors, but regiments; for conflict, not negotiation, Courtesy toward evil is poltroonery. Irresoluteness postpones victory, it doesn't win it. Domesticating an outlaw does not change him. You can't cure a cancer with a piece of court plaster.

And so this implacable feud is on, and I don't know of anything we need more, or more of it in our time or town, than the spirit of the sword. The courage of our convictions to see things as they are, to name them according to their character, to deal with them as they are, and with stubborness refuse to show anything but the black flag to whatever is opposed to good government; to honestly conducted business, to a purer and more unselfish social state, and an equitable solution of our industrial problems.

ANDREW McLEAN.

Wherever any of us stand is holy ground, because it is a battlefield, and at whatever point we individually touch society, that is the spot that ought to feel the point of our spear and the edge of our sword. The place where our business plants us and our customary duties engage us, is the one where we shall wield our weapon to the best effect, and the soonest prepare the way for the ploughshare and the reaper.

God give us men, a time like this demands
Strong minds, great hearts, true faith and hands.
Men whom the lust of lucre does not kill,
  Men whom the spoils of office cannot buy,
Men who possess opinions and a will,
  Men who have honor. Men who will not lie.
Men who can stand before a demagogue
  And damn his teacherous flatteries, without winking.
Tall men, sun crowned, who live above the fog
  In public duty and in private thinking.
For while the rabble with their thumb-worn creeds,
Their large professions and their little deeds,
  Mingle in selfish strife, lo! Freedom weeps,
  Wrong rules the land and waiting justice sleeps.

At the conclusion of Dr. Sanders' address the chairman said: In any assemblage of intelligent men to-day a recognition of the power of the press, and its commanding influence in civilization of the nineteenth century, is as natural as the acceptance of the law of gravitation, or the principle of evolution of the species. In that profession, no brighter intellect or agreeable personality will be found than in our friend, Andrew McLean, the editor of the *Brooklyn Citizen*.

Mr. McLean then spoke upon the topic: "Iron in the Public Press."

MR. M'LEAN'S ADDRESS.

MR. PRESIDENT AND GENTLEMEN: I take the liberty of expressing the extreme pleasure that I have had here to-night, and in addition to expressing the present pleasure that I have had at the hands of agreeable gentlemen, I wish to say that the general tone of the discourse to which I have been privileged to listen, has added much to that happiness. I think, Mr. Chairman, that it is not one of the least mistakes with commercial gatherings of a social kind, the mistake of assuming that the discourse should run along the lines of the particular business to which the gentlemen concerned are devoted. There are times when the one thing in order is speech about business; there are other times when the one thing in order is the principles that underlie business and business life. To-night we have all been privileged to listen to speeches that have been of the deepest interest, not only to men in the Hardware trade, but to every one interested in the life around us. I must also say that among the pleasures that I have had here to-night is that of sitting under the presidency of Mr. Williams. Brooklyn, as you all know, is merely an obscure town in the eyes of all New Yorkers. It is, therefore, especially gratifying to a Brooklyn journalist to be at a gathering where Brooklynites are honored. Among the citizens of Brooklyn there is not one that stands higher in the estimation of his fellow citizens than the president of this gathering here to-night. There is one thing with which I do not find myself in accord, and that is the observation of Mr. Woodruff as to the opposition of the press to the greater New York. It is doubtless because Mr. Woodruff, in the multiplicity of his employments, and in the fullness of his occupation as a political leader, has overlooked what is going on in the press of Brooklyn. I have had the honor, the duty, indeed the questionable honor, indeed the somewhat obscure duty, of contending for the consolidation and not for the opposition. (Applause.) In addition I would say that while there has been very much in the government of Brooklyn, and of New York alike, to warrant every good citizen in putting forth all his efforts, still it is true that there is no city in the world which more distinctly represents the power of the common man to carry on government, than the city of New York itself. (Applause.)

You have undoubtedly great evils to cure. But it is still a fact that New York is a great and noble city, worthy of the affection that she enjoys at the hands of her children, and that upon the whole the metropolis of the Union is not unworthy of the Union over which it presides. (Applause.) This, too, I take the liberty of saying within the little time at my disposal, that inasmuch as you have allowed of large latitude, I may be perhaps permitted to say that I differ from the distinguished gentleman who now sits upon your bench. I refer to Mr. Goff's opinion that we should in these great cities forget partisanship. That is a mistake. We should, on the contrary, keep in our minds the needs for which parties exist. New York has gone down because New Yorkers have lost sight of the fact that parties are agencies. We should have a reawakening of the few to the fact for which parties exist. It is in my mind a misconception of the whole of our government to imagine that we can carry on this government without being partisans. But to have to continue your opinions and to decline to recognize the organizations that carry on these opinions, is in my idea a part of the duties that we owe to our citizenship.

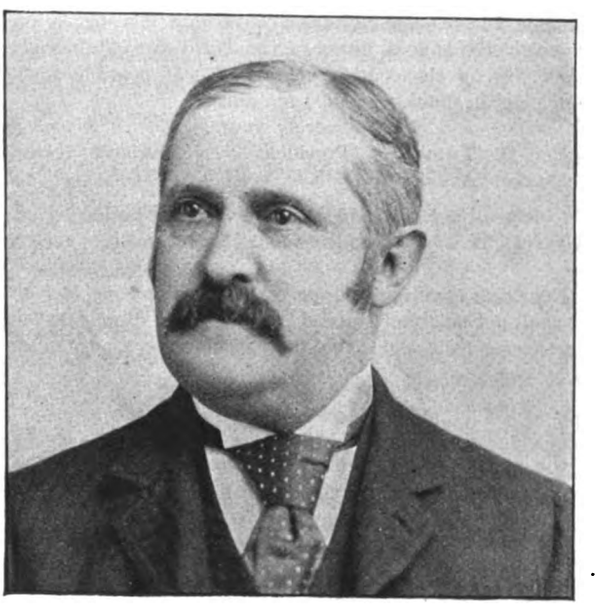
The gentlemen of the Hardware and metal trades are distinguished for enterprise and intelligence. It is quite unnecessary to dwell upon the ways and the manners in which iron is related to the sum of our industries. It may be well called the basic industry. It stands on the top and it is related to the bottom. There is hardly a thought upon which we can put our minds with which the iron master is not connected. Next to the gentlemen who control the sugar trust, no body of men hold a higher position of importance in the country to-day than those engaged in the manufacture of iron. Reference has been made to our municipal problems. In our national affairs, as well, we are confronted with this gruesome spectacle of corruption, and closely related to it are the men who are related to the construction and the sale of iron. It will do no harm if the members of the iron trade will lay to their hearts the principles enunciated by our friend and lay it down that the national conditions shall not involve assaults upon the very life of the republic. (Applause.) The gentleman who drew the toast to which I am permitted to respond was a gentleman of much more active imagination than I can venture to claim.

Iron is a very large subject. The press is a still larger one. On either one of them I could write a book, and this I do not propose to do to-night. But this, I think, can be said concerning the press and concerning iron, that in much of the press iron is constantly telling as an influence. I can enumerate not only the trade journals, where its influence is properly and rightfully felt, but I can mention many a newspaper where there is iron in the editorial room, as well as in the press-room, that produces the newspaper. (Applause.) But the thing that I have particularly in my mind is what I am sure every journalist would say if he were here in my place—that there is no body of men who could gather in New York who have a larger claim upon the attention of every newspaper in the United States than the iron industry has. It is a mere truism to say that it underlies, as we have indicated, the general sum of our industries. Modern civilization has taken on conditions that make that inevitable. And the iron trade cannot suffer, cannot be put in paralysis, as we know, without our other industries suffering. And those who look toward the future keep their eyes fixed upon the iron industry. There we see the dawning, so to speak, of a new spring, the coming of a new summer. So, when Mr. Williams said here to-night, that better times were coming, that was being said which ought to have encouraged every friend of industry in the United States. (Applause.) It is suggested by Matthew Arnold, in his essay on "Sweetness and Light," speaking of the iron-masters of England, who typify in his mind the large fortunes of England, that if we compared them with other gentlemen who lead a very much more moderate existence, one would see very little to admire in carrying on their industries and building up their fortunes had they sacrificed that light of soul which is the very end for which industry should be carried on. I know not how true it was in England when Matthew Arnold wrote, but I know it would be a great misfortune if it were true in these United States. However much we shall give our hearts and our minds to the carrying on of trade, we shall ever remember that the man is more than his occupation and the country is more than the sum of all its industries. (Applause.) The iron-master has nothing to do, in God's heaven, that is incompatible with the highest manhood, and there are men around this board who are compatible with both. The lesson in this republic to-day is that for certain ends we live. It is that we shall be good and true and honest men; that after us shall live a great and a noble nation, after all have passed away, and that never shall the nation be laid prostrate before our manhood or our occupation. (Applause.)

The last number upon the programme, a bass solo by Mr. Bushnell, was "Rocked in the Cradle of the Deep," which won a hearty outburst of applause. Then, upon the suggestion of the president, Mr. Bushnell led in "Auld Lang Syne," in which the company joined; and with that the Annual Dinner of 1895 came to an end.

LETTERS OF ACCEPTANCE AND REGRET.



The following letters carry their own explanation:

Executive Department, Columbus, Ohio, December 15, 1894.

J. H. Kennedy, Editor HARDWARE, (of the Dinner Committee.)

I have just read your very generous and interesting favor of the 11th inst.

My inclination is all in the line of accepting the invitation which you informally extend, for I fully realize the representative character of the New York Hardware Club. I have always considered that in no branch of industry are the benefits of protection more clearly shown than in the Hardware trade. I would, therefore, feel a special pleasure in meeting face to face the gentlemen of the New York Hardware Club, but I really feel compelled to send a declination to your invitation. I find that the demands upon my time are altogether more than I can meet. Already I have enough engagements for the early winter to consume most of the spare time at my disposal. Please convey to

J. L. VARICK, CHAIRMAN TABLE D.

the gentlemen of the Hardware Club my appreciative regards and my regret at my inability to accept their invitation.

Yours sincerely,

W. MCKINLEY.

Heavy Hardware Jobbers' National Union,
Chicago, January 29th, 2895.

Mr. WILLIAM H. WILLIAMS, President Hardware Club, New York City:

Dear Sir: I have received, through Mr. George Deming, of Cleveland, your invitation to me, as president of the Heavy Hardware Jobbers' National Union, to attend the annual dinner of the Hardware Club, of New York city, to be held on Thursday evening of this week. In behalf of the Association which I represent, I thank you most cordially for the invitation, but regret that I shall not be able to attend.

Yours very truly,

S. D. KIMBARK, President,

Edwin L. Haley & Co., Boston, January 17, 1895.

WILLIAM H. WILLIAMS, Esq., President Hardware Club, New York City, N. Y.:

I am in receipt of your kind invitation to be present at your annual dinner, January 31st, 1895. I regret very much that prior engagement made with the Associated Board of Trade of our State to meet with them, at which time they are to entertain all the Governors of the New England States, prevents me from accepting.

Wishing your club the continued success which it richly deserves, and regretting my inability to be present, I remain,

Yours respectfully,

EDWIN L. HALEY, President.

Mayor's Office, Brooklyn, January 18, 1895.

Mr. WILLIAM H. WILLIAMS, President Hardware Club, New York City:

Dear Sir: I am directed by His Honor, the Mayor, to acknowledge the receipt of your cordial invitation to attend the annual dinner of the Hardware Club, of New York, at Sherry's, on Thursday evening, January 31st, at six-thirty o'clock, and to say for him that he will be glad to accept and be present with you on that occasion Very sincerely yours,

W. M. PALMER, Secretary to the Mayor.

Mayor's Office, Brooklyn, January 23, 1895.

Mr. WILLIAM H. WILLIAMS, President Hardware Club, New York City:

Dear Sir: The Mayor desires me to say that he will have to reconsider his acceptance of your cordial invitation to attend the annual dinner of the Hardware Club, on January 31st, owing to the present condition of affairs in this city. He regrets the necessity of making this change in his determination.

Yours sincerely,

W. M. PALMER, Secretary to the Mayor.

Lowell, Mass., January 14, 1895.

Mr. WILLIAM H. WILLIAMS, President Hardware Club, New York City:

Dear Sir: I have your invitation of the 10th inst. before me, to be present at the annual dinner of the Hardware Club, and beg to thank you for the courtesy extended. If possible I will be present. Again thanking you, I remain,

Very sincerely yours,

SAMUEL H. THOMPSON, President New England Hardware Dealers' Association.

Russell & Erwin Mfg. Co., New York, January 31, 1895.

Mr. WILLIAM H. WILLIAMS, President Hardware Club, New York City:

My Dear Sir: Owing to the very serious illness of Mr. Woodruff, I shall not be able to attend the Hardware dinner this evening, or to accept the seat at the table of honor so kindly tendered to me by you. Yours very truly,

WILLIAM G. SMYTH.

At the annual meeting of the National Wringer Mfg, Co., Canton, Ohio, January 15th, the following officers and directors were elected: president, F. Herbruck; treasurer, Jos. Schott; secretary and general manager, Al. Schott; directors, F. Herbruck, Jos. Schott, Al. Schott, M. S. Schott, Isaac Weiner and J. Markling. The company report that the year just closed has proved a prosperous one, and the present year gives even greater promise. H. F. Livermore & Co., No. 34 Oliver Street, Boston, Mass., will represent the company in the New England States.

The St. Louis Wooden Gutter & Refrigerator Co., St. Louis, Mo., elsewhere present the claims of their Lu-Mi-Num bicycles. As aluminum has made its impress for lightness and strength in other directions of manufacture, we do not see why it should not have the same good results in the bicycle line. The company certainly make a good presentation of their claims, as will be discovered by any dealer who will open correspondence with them.

Elsewhere, E. Bissell, Son & Co., No. 12 Murray Street and No. 15 Park Place, New York, announce for Tuesday, February 12th, a special auction sale that should attract the attention of the trade. It comprises a line of goods from the Lalance & Grosjean Mfg. Co. On Thursday and Friday, February 14th and 15th, they will also have a sale of table and pocket cutlery, plated flat ware, shears, spoons, carvers, etc. The full details will be found upon page 80 of this issue.

The Buckeye Churn Co., Sidney, Ohio, are still pushing with considerable success their well-known Buckeye Churn, in which the "new motion" in butter making has shown such gratifying results. They will be pleased to send prices and descriptive circular to any who may be interested.

Bicycle Board of Trade Meeting.

At the meeting of the National Board of Trade of Cycle Manufacturers, held in the Madison Square Garden, January 24th, the following business was transacted: Secretary Child read the treasurer's report, showing a balance on hand of $347.15. It also showed that the Board was organized on January 10, 1894. The work of organization was in the hands of Messrs. Pope, Coleman, Lozier, Spalding and Stimpson. All the shares have been subscribed for—1,000 shares at $5 each. Paid in, twenty per cent. as called for, or $1,000.

Upon nomination by the chair, Colonel Ben Lovell, A. L. Garford and George R. Bidwell were constituted a nominating committee, and the following Executive Board were unanimously elected. Colonel George Pope, Pope Mfg. Co.; A. G. Spalding, A. G. Spalding & Bro.; R. P. Gormully, Gormully & Jeffery Mfg. Co.; R. L. Coleman, Western Wheel Works; C. F. Smith, Indiana Bicycle Co.; W. F. Wilson, Liberty Cycle Co.; C. W. Dickerson, Sterling Cycle Co.; Joseph McKee, McKee & Harrington; Walter Measure, Union Cycle Co.; E. C. Stearns, E. C. Stearns & Co.; A. Kennedy-Child, Curtis-Child Co.; W. J. Bruff, Remington Arms Co.; W. A. Redding, New York.

After the general meeting the Executive Committee met and elected the following officers: President, A. G. Spalding; First Vice-President, R. P. Gormully; Second Vice-President, Colonel George Pope; Treasurer, W. A. Redding; Secretary, A. Kennedy-Child.

At the Saturday meeting the following important resolution was introduced by C. W. Dickerson: That all future shows in this country be held under the auspices of the National Board of Trade. This resolution was unanimously adopted. The following sub-committees were also appointed: Legislative Committee—W. A Redding, chairman; George R. Bidwell, A. Kennedy-Child. Press Committee—R. Philip Gormully, chairman; George Pope, C. W. Dickerson. Transportation Committee—Joseph McKee, chairman; George H. Day, R. Lindsay Coleman, C. F. Smith, George R. Bidwell. Racing Committee—George Pope, chairman; E. C. Stearns, C. W. Dickerson.

By an oversight in the writing up the detailed account of the New York Cycle Show, the display made by A. Featherstone & Co. was unintentionally left out. We now take great pleasure in inserting the same. The Biddle Hardware Co., Philadelphia, were in charge of this exhibit. The wheels shown comprised eight models. The well-known Road Queen (lady's), weight 29 pounds, list $80. Road King (gent's), 24 pounds, list $80. Duke, 28 pounds, $60. Duchess, 33 pounds, list $60. Prince, 25 pounds, $50. Princess, 29 pounds, $50. Middy, 23 pounds, $40 (boy's wheel). Midget (girl's wheel), 27 pounds, $40. Flying Gib, $20. The wheels are well finished and are fitted with popular tires and Garford's saddles.

Schoverling, Daly & Gales, No. 302 Broadway, New York, are distributing a most ingeniously constructed game marker. It is made of cardboard, in the form of a bicycle. Two disks with numbers marked thereon revolve behind the bicycle wheels, showing the numbers of games and points through two holes cut in the two wheels. Within the frame of the cycle appears the announcement that "The Gales Win The Game."

The Troy Nickel Works, Troy, N. Y., are sorry to inform their many patrons that the 1895 crop of dimeandpins has been blighted by the cold weather. Those who desire to possess these handsome articles, are requested to patiently await the next harvest, when they will be remembered. Though the productions of this well-known company are Always Cold, it is seldom that their friends "get left."

HARDWARE costs only One Dollar a year.

"Ohio" Ice Cream Freezer.

The Sam'l C. Tatum Co., No. 254 Water St., Cincinnati, O., are making the "Ohio" Freezer, Gooch's patent, in sizes from 3 to 25 quart. As seen from the illustration, the gearing is fully housed and so arranged as to prevent dirt and oil getting into the can. The shank of the dasher comes up through the housing, so that the crank may be used either from the top or side. The can has an iron top with gearing

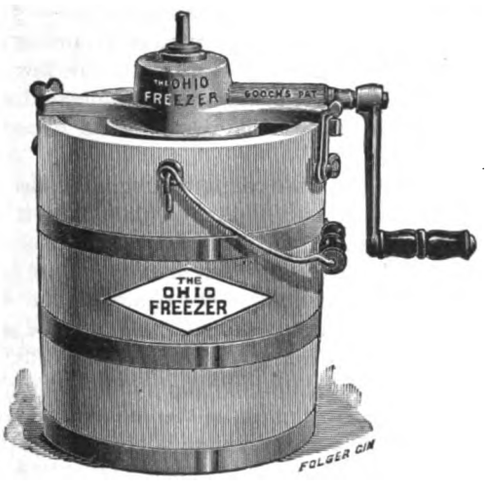

FIG. 1.—THE "OHIO" FREEZER.

on it, concealed under the housing, giving one motion to the can, while the reverse motion is given to the dasher. The dasher on one side has spiral projections which thoroughly stir up the cream from the bottom, while on the other is a wood strip which in the action of turning the dasher presses closely against the outside of the can, and thus insures the thorough stirring of the entire contents of the can. The parts are accurately fitted, and with exceedingly neat and new label make a very attractive article for the Hardware dealer as well as the customer.

Fig 2.—Section, showing motion of cream to and from the center

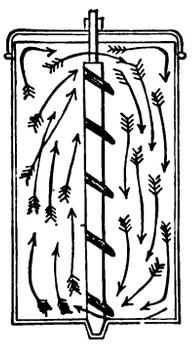

Fig. 3.—Section, showing motion of cream from bottom upwards.

Yale & Towne Mfg. Co.'s Boston Office.

The Yale & Towne Mfg. Co. make the following announcement under date of February 1st: We beg to announce that Mr. A. T. Young, heretofore manager of our Boston house, has resigned his position and will be succeeded on February 1st by Mr. John T. Boyd, formerly and for several years manager of our house in Philadelphia. The latter hopes within a short time personally to call on many, if not all, of our customers whose business is transacted through our Boston house, and will be pleased always to receive them when they can make it convenient to call at our office.

Our line of Hardware products as now constituted is unequalled in character, variety and extent, embracing as it does, our extensive lines of Yale and Standard locks; an unrivalled line of Art Hardware in bronze, brass and Bower-Barffed iron; our new and complete line of Cabinet Locks, the latest and most extensive in the market; our large line of Padlocks, both of finer and the cheaper grades; and the complete product of the Branford Lock Works, now owned by us, comprising a full assortment of Locks and Builders' Hardware of less expensive and more popular character than most of our Stamford products, and unexcelled in range, variety and quality by any other comparable line of goods. To these we are now adding, and are just placing on the market, a new and extensive line of Wrought Goods in bronze and steel, both plain and in various ornamentations. Collectively these varied products constitute the best, cleanest and most extensive line of Builders' Hardware in the market.

The catalogue of our Hardware products is now embraced in four volumes, viz.:

No. 14, 1883, Yale and Standard Locks, and Fine Hardware.

No. 15, 1894, Art Hardware, Supplementary to No. 14.

Branford Lock Works Catalogue, 1893, Locks and Hardware.

Cabinet Lock Catalogue, 1894, Cabinet Locks, Cabinet Hardware and Padlocks.

Customers not already supplied with any or all of these catalogues will be promptly furnished with them on application.

Trusting that the many recent additions to and improvements in our line of Hardware products will interest our customers and lead to increased business, with benefit both to them and us, we are Respectfully,

THE YALE & TOWNE MFG. CO.

Rhode Island Perkins Horseshoes.

Under date of February 1, 1895, the Rhode Island Perkins Horse Shoe Co., Providence, R. I., make the following interesting statement:

We have prepared the following table to show the relative cost of our special patterns of shoes compared with our regular standard patterns and to confute the statements of those who claim we charge too much difference for them. We take our list price as the basis of cost; a No. 2 regular Light pattern as a basis of size and weight; and a pair of two shoes as a quantity basis. The same proportional difference of cost will apply on the Medium and Heavy of all patterns.

One pair Light Toe Weight Shoes cost 1¼ cents more than one pair No. 2 Front Light.
One pair Front Extra Light Shoes cost the same as one pair No. 2 Front Light.
One pair Front X. L. Steel Shoes cost ½ cent less than one pair No. 2 Front Light.
One pair Front Calked Shoes cost 1 cent less than one pair No. 2 Front Light.
One pair Front Side Wear Shoes cost ½ cent more than one pair No. 2 Front Light.
One pair Mule Shoes cost 1¼ cents less than one pair No. 2 Front Light.
One pair Cowboy Shoes, fitted, cost 2 cents more than one pair No. 2 Front Light.
One pair Hind Extra Light Side Weight Shoes cost 3 cents more than one pair No. 2 Hind Light.
One pair Hind X. L. Steel Shoes cost ½ cent less than one pair No. 2 Hind Light.
One pair Hind Calked Shoes cost the same as one pair No. 2 Hind Light.
One pair Hind Side Wear Shoes cost 1½ cents more than one pair No. 2 Hind Light.
One pair Hind Extra Light Shoes cost the same as one pair No. 2 Hind Light.

In another column we present the advertisement of the "Self-Closing" Tomato Support, manufactured by the Lewis Mfg. Co., Utica, N. Y. The manufacturers say that this has proven to be an excellent seller among the Hardware trade, as "it sells on sight, and fills a long-felt want among gardeners and farmers generally." The cuts in the advertisement explain the manner in which the Support is used. It is made of heavily galvanized wire, is strong, and will last for years. It folds into small space, and in use keeps the vines well above the ground, allowing free circulation of light and air. It pays a good profit to the dealer. The manufacturers will cheerfully give any further information that may be desired.

Hardware Club Notes.

The following gentlemen have been unanimously elected to the New York Hardware Club since our last report:

Nathaniel C. Fisher, No. 146 Duane Street.
Irving R. Fisher, No. 146 Duane Street.
James McK. Graeff, No. 196 Church Street.
Alfred W. Kidder, Potter Building.
J. M. Schermerhorn; Middlesex Rubber Works.
A. J. Sloper, New Britain, Conn.
Wm. H. Trabue; Kelly Axe Mfg. Co.

The total membership of the New York Hardware Club on January 15th was 548, consisting of 460 resident members and 88 non-resident members.

The following is a list of some of the many visitors who have registered at the Club: Theodore Burbank, Salt Lake City; O. S. Gutherz, Carlsbad; W. H. Grindley and Alfred Meakim, England: O. Brocumeweins, Paris, France; Max Firsser, Carlsbad; T. A. Emmons, Montreal; R. L. Johnson, England; Geo. Borgfeldt, Vienna; Dr. Austin Henry, China; Juan Garcia, Havana, Cuba; Edwin Moore, Kensington, Conn., the artist whose pictures adorn so many spaces in the Club rooms.

Axle Manufacturers Meet.

The National Association of Axle Manufacturers met in Pittsburg, Pa., at the Monongahela House, last week. Representatives of the following companies were in attendance: Cleveland Axle Mfg. Co., Canton, Ohio; Sheldon Axle Co., Wilkesbarre, Pa.; Liggett Spring & Axle Works, Pittsburg, Pa; Singer, Nimick & Co., Pittsburg, Pa.; La Belle Steel Co., Pittsburg, Pa.; H. Hay & Son, Coshocton, Ohio; Scranton Axle Co., Scranton, Pa.; Spears Axle Co., Wheeling, W. Va., and the Woods-Smith Co., Chicago, Ill.

The association gathered to pass on matters of importance to the trade. A resolution was adopted making a five per cent. reduction in the selling price of axles, to take effect immediately.

Fell Down an Airshaft.

Emanuel Samuel, forty-five years old, the senior partner in the firm of L. M. Samuel, Benjamin & Co., Hardware merchants of Toronto, Canada, while looking down the airshaft of the Crossman flat at No. 171 West Seventy-eighth Street, from the third floor, February 3rd, lost his balance and fell to the bottom, breaking his spine and several ribs. He expired two hours later. Mr. Samuel was prominent as a Hardware merchant. He left one brother, his sole living relative, who is the agent for the firm in London. He married twenty-five years ago, and has had no children, his wife dying eleven months after marriage.

The New Haven Wire Mfg. Co., New Haven, Conn., have just completed a large two-story addition to their wire mill, in which they have placed the latest and most improved wire drawing machinery. This department will run almost exclusively on the special grades of wire used by Hardware manufacturers, such as require great accuracy in drawing and uniform temper. During the past three years this company have paid particular attention to the requirements of consumers of special wire, and as the entire plant is practically devoted to the production of those kinds of wire, manufacturers can depend upon prompt and satisfactory fulfillment of orders.

The Standard Fibre-Ware Co., Mankato, Minn., have made a material reduction in the price of their spittoons, as will be seen by reference to our Prices Current. They have had great success in selling these goods to the Hardware trade. They point out the ease with which they can be kept clean, and their great durability. The covers are especially strong. They will be glad to correspond with any who are interested in goods of this character.

Review of the Markets.

Financial: The interest of the financial world is centered in Washington. There is no doubt that a bond issue of $100,000,000 will be made, and that shortly. The cabinet has given Mr. Carlisle authority to issue bonds at his discretion, and he will act soon if Congress does not act on a financial bill. An issue of certificates of indebtedness has been proposed in the House instead of bonds, and is favored by Mr. Reed, of Maine. The President's message to Congress on Monday sums up the situation in a clear and concise manner, and is really an appeal to the law-givers of our country. Foreign speculators seem able and willing to subscribe for the entire bond issue. The exportation of gold has ceased.

In Hardware, there is a slight change for the better in the condition of the trade. As yet, however, it is not as steady as is desired. Possible legislation on the currency question has had the effect of frightening off the large buyers. The trade must necessarily come, as the stocks all over the country are in a depleted condition and must soon be replenished. The fact that so many new factories are being opened up, show the way the tide is setting.

Locks: There is no change in the lock market. Things are moving as slowly as they were at the first of the year. Cabinet locks are still at a very low figure.

Blocks: The block trade is very bright. Manufacturers are in many cases working their full capacity, and are behind in their orders.

Skates: Houses that handle skates are congratulating themselves. Owing to the extreme cold weather, the sales have been large and numerous, more so just now than before.

Cutlery: During the last week the cutlery trade seems to have taken an upward move. Orders for pocket knives and razors have been coming in better than for some time past. The import trade in pocket knives, carvers and table knives seems quite large. One firm in New York have orders for over 650 dozen table knives. There is a feeling that prices have become settled, and the outlook for trade is quite encouraging.

Nails: Wire Nails: In spite of the bad weather, which the manufacturers say is not favorable to the nail market, wire nails are showing an improvement. Prices are higher than last week. Prices range from 90 to 95 cents at mill. The current price is often put at 95 cents. Most of the mills have full orders. Cut nails show no improvement; prices are stationery. Carloads on dock are quoted at 85 cents, small lots from store from 90 to 95 cents, carload lots at mill 75 cents,

Nuts and Bolts: The market is very quiet. The Western markets show an improvement over the Eastern. The new list goes into effect on February 14th.

Hinges: There is no change in the hinge market, and none but the usual demand for these articles. Prices seem to have reached the lowest figures. No change is anticipated.

Paint: The financial question is having a depressing effect on the paint market. The outlook for a good spring trade is not very flattering. Prices are low.

White Lead: The strikes and storms that prevailed throughout the country, and the generally unsettled condition of affairs have almost destroyed what little trade there was in this line. The recent price list issued by the National Lead Company is as follows, subject to change without notice: Pure white lead, dry and in oil, red lead or litharge in kegs, in lots of less than 500 pounds, 5¾ cents; in lots of 500 pounds and over, 5¼ cents. Red lead and litharge in barrels and half barrels, ¼ cent per pound less than price in kegs. White lead in 25-pound tin pails, 1½ cents; in 12½-pound tin pails, 1 cent; in 1 to 5-pound tin cans (100 pounds in a case), 2½ cents per pound above keg price. Terms: On lots of 500 pounds or more, 60 days,

Digitized by Google

or 2 per cent. discount for cash if paid within fifteen days from date of invoice. Red lead: For German makes prices are firm at 4⅜@4¾ cents, as to the size of the order and date of shipment, while for jobbing store parcels they are quoting 4⅞@5 cents. Domestic makes are quoted at 4½@4¾ cents. Litharge: The probable shut down of many of the rubber factories in the near future has curtailed the sale of this article. Quotations are at 4¼@4¾ cents. Zinc: Values remain unchanged. The export demand is fair. The quotations are 3¾@4¼ cents. Window Glass: The market is not changed; prices are low. Linseed Oil: There is no cheap oil anywhere at present, quotations having been advanced to 56 cents. Business is light and of a jobbing character.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Clapp & Co., bankers and brokers, New York, in their latest weekly letter, say: "In 1861 and 1862, when the country gave up a gold basis, and went on to a currency basis, money at first became scarcer and values declined. The reduction of currency and withdrawal of gold then took place. In 1879, when the resumption began, values advanced, the circulation of money increased equal to the amount of gold, that again became a circulating medium. The United States gold product for 1894 as estimated by Wells, Fargo & Co., was $45,892,668, and for ten years previous $303,430,823. The silver product was $28,721,014 in 1894, against $521,622,600 for ten previous years. The value of the copper and lead mined in 1894 exceeds that of silver. The four metals equalled a valuation of $105,113,479; Montana and Colorado producing more than half. The Mexican Republic produced for the year ending June 30, 1894, $1,425,000 in gold, $47,250,000 in silver, and coined for the ten preceding years $10,450,057 in gold and $507,317,921 in silver. The world's product of gold in 1894 is estimated at about 170 millions. The exports of silver to China, Japan and the Straits in 1894, via London, were $46,502,180, via San Francisco $12,520,678; total, $60,022,858."

THE MINNEAPOLIS TRADE.

Midwinter's dullness, with the thermometer from 10 to 30 degrees below zero; not a very good time for building operations, and the loggers have the principal part of their supplies in. Travellers are out looking for spring orders, but it is rather early yet to expect very much business.

There are a number of changes made and contemplated in the Hardware trade here. F. R. Warner has moved from his old location on the east side to Bridge Square, next door above us. T. M. Roberts, who is doing a catalogue business, and handles everything from a plow to granulated sugar, furniture, watches, etc., as well as Hardware, has leased the three-story building recently erected on Nicollet Avenue, between Seventh and Eighth Streets, next door to the Pierson Hardware Co. This will give him ample room in which to handle his increasing business.

The Pierson Hardware Co. have advertised that they are going out of the builders' Hardware business, and propose devoting all of their attention to stoves, bicycles, etc.

Among many of the dealers here there has been a great deal of dissatisfaction against a local jobbing house on account of the alleged fact that they have been practically conducting a retail business, selling nearly anything to anybody that might come along, and at prices that retail dealers could not afford to meet. They have made the announcement that hereafter there will be no just cause of complaint in this respect, and that they will not only discontinue this practice generally but will not sell even the largest and best contractors goods that could be purchased of retail dealers. The St. Paul houses had already signified their intention to let this class of trade alone. This will meet with the approval of every dealer in this city, as all were effected to a greater or less degree, and we firmly believe there will be a better feeling between their customers and themselves, and that it will result in more business and profit to them in the end.

A very important contract, that of the Hardware for the new court house and city hall, was let about ten days ago. A very hard fight was made by our local dealers, representing various prominent companies. The representatives of these companies were here as well, and the merits of their goods, as well as the weak points of their competitors' lines, were fully explained to the building committee. Special designs were gotten up and submitted. It was finally awarded to us on the Yale & Towne Mfg. Co's goods, special Romanesque design, bronze, old copper finish; the highest of fifteen bids being accepted. As this building will cost when completed over three million dollars, the manufacturers themselves were particularly interested in the matter, and each being determined the other should not have it, prices were made that certainly cannot leave a very large margin of profit to any one, but this of course is favorable to the city and county, the Hardware being furnished for about one-half of the estimate.

Regarding future business, local trade will naturally be very quiet until about the first of April; we do not expect a general revival of business until after the new crop, and then much will depend upon the price of wheat.

W. K. MORRISON & Co.

THE BOSTON TRADE.

The month just closed has been very satisfactory, and the jobbing trade have no cause for complaint as regards the amount of business, for a month which is usually considered one of the quietest of the year. Salesmen have made their first trips, and report a better feeling existing among the country merchants, and their orders for spring goods are in very satisfactory quantities.

There does not seem to be that firmness in prices that is wished, and manufacturers are still willing to make some concession from quotations made early in January. However, as trade opens we hope to see advances that may be warranted. The advance in iron and steel is encouraging to those who regard these industries as barometers of trade. Barbed Wire and Wire Nails have already felt the effect, with prospect of further advances in the future.

FRYE, PHIPPS & Co.

THE BALTIMORE TRADE.

Everything here is in the grip of King Frost. With the thermometer hovering about the zero mark, no great amount of business can be expected in this section. The recent cold snap has practically tied up shipments to river points, while along the Shenandoah Valley, Western Maryland and West Virginia, snowdrifts have rendered road travel almost impossible. Along the eastern shore of Maryland and Virginia the oyster industry is, for the time being, dead. Of course, we are doing some business, but it is not all it should be, nor, in fact, even up to expectations. A careful canvas of our neighbors assures us that we are not an exception. Letters from travelers are not entirely devoid of comforting tidings, and a break in the present severe weather would materially help to mend matters.

The incompetence of the present Congress gives but little hope of currency reform. Another bond issue of one hundred million four per cents. seems inevitable. That much of this will be taken by foreign buyers is probable. Viewed from a practical point, this may bring a temporary relief, but it certainly should be a humiliating reflection to those who have rendered such a course necessary.

THE TABB & JENKINS HARDWARE Co.

THE DAVENPORT TRADE.

Notwithstanding the heavy fall of drifting snow on the 25th ult., trade has kept up remarkably well, and the railroad service has been good; mail has been delivered nearly on time, and freight has been delivered promptly. The snow came in time to help the sale of bob sleds and sled runners, but too late for fancy pleasure sleighs or sleigh bells, many of which will be carried over.

Digitized by Google

Rope has advanced after touching a lower point than ever before here, and the advance has stimulated the demand for binder twine. Shot advanced five cents per bag on the 1st inst., but its near relative, solder, dropped a point or so. Linseed Oil has advanced, and strictly pure white lead remains firm since the December decline of ten dollars per ton. Collections are fair, and there are no local failures to report.

Manufactnrers are working the retail trade harder and harder every year; the jobbers' margins are getting smaller and smaller every year; their expense account grows greater and greater every year; and still, with increased volume of business, they seem to get a little further from the poorhouse every year.

SICKELS, PRESTON & NUTTING CO.

THE CLEVELAND TRADE.

The indications for business for the spring are very encouraging. It looks as though we would have a steady gain over the business of last year. Nobody expects, however, that this gain will be sufficient to put business upon a par with that enjoyed in 1892, or in the early part of 1893. But it is encouraging, in so much that it shows a tendency to an improvement. With values remaining as low as they are, it is impossible to do the volume in dollars and cents unless the quantity of goods handled is very much larger, and this cannot reasonably be expected.

Staple goods, such as Wire Nails, Barbed and Smooth Wire, are in active demand, and all the mills claim to be full of orders, so much so that they have advanced their prices materially, and we have no doubt that they will be maintained some little time to come. It has been the experience for some years past that it is difficult to make prompt shipments of these articles during the spring months, and merchants who have not yet placed their orders would do well to anticipate their wants sufficiently to be sure to have them when they are wanted.

The discussion of the currency question in Congress does not seem to have had very much effect on ordinary business, as orders continue to come in as though no discussion of this kind were going on, indicating that the people at large are satisfied that the currency which they are using is all-sufficient for their purposes. It is to be hoped, however, that some plan will be advanced by our legislators, so that they will take this subject out of the field of discussion, as the tendency is to unsettle more people the longer it is kept before them.

MCINTOSH-HUNTINGTON CO.

THE GRAPHITE TRADE.

Business for the month of January has been quite satisfactory, with an increase over January, 1894, of 25 per cent. at the main office, and 25 to 33 per cent. at the branches in New York, Philadelphia and San Francisco. The principal increase applies to crucibles, pencils and stove polish, in the order named.

Encouraging features are, first: The smaller percentage of requests for "lowest possible price" accompanying orders; and, second: Orders booked for March delivery changed to "ship immediately."

We have added to our force of traveling men, and are not hesitating at any reasonable outlay toward attracting to ourselves the dealers with which this country is filled, and who are ready and anxious to put their capital into quick selling goods, as proved by the enormous number of daily inquiries for catalogues and prices. Collections cause no trouble.

Maurice Stransky, of Stransky & Co., importers of Steel Enamel Ware, No. 27 Murray Street, New York, has just returned from a European trip. While abroad, Mr. Stransky traveled extensively in England, France and Germany, in the interest of his firm. He brings with him the sole agency of nine styles of enamel ware, manufactured in Germany. Three of these styles are entirely new. Turquoise and White, Starry Turquoise and White, and Ivory and White constitute the new lines; the others are Mosaic and White, Garnet and White, Inlaid and White, Cameo and White, Blue and White, and Cameo inside and out. They carry the Cameo inside and out in stock, and take import orders for the other eight. This ware is furnished in American shapes.

The Spokane Hardware Co., Spokane, Wash., have completed arrangements for the purchase of the stock and business of the Spokane Machinery Co. at that place, and have assumed control.

New York Office, David Eastman, Manager, 64 Reade St.

Curtis-Child Co. Shut Down.

The Curtis-Child Co., of Thirty-first and Ludlow Streets, Philadelphia, have confessed judgment to the amount of $3,050; $150 in favor of Mrs. Curtis; $900 in favor of Horace Pettit, the firm's patent attorney, and $2,000 in favor of their nickel-plating concern. The recent failure of the Pennsylvania Cycle Co., who owed the Curtis-Child Co. $17,000, is one of the principal reasons for the failure. The principal stockholders of the Curtis-Child Co. were George E. Curtis, of Philadelphia; and A. Kennedy-Child, of Hartford. The connection of both of these members with the trade is well known. It is the general hope of the trade that the difficulty will be but temporary.

Amos Harvey, who for twenty-five years past has conducted a Hardware store in Carmel, Mass., and now seventy-five years old, was found unconscious in the streets of Watertown, Mass., January 30th., not having been able to obtain any food for two days. He had undertaken to walk to Rochester, N. Y., but had to succumb to cold and hunger. Willing hands and generous hearts in Watertown provided the old man with means to reach the end of his journey. He had within a short time been worth $45,000.

Patterson, Gottfried & Hunter, Nos. 146 and 150 Centre Street, New York, are brightening up their output of Hardware, metals, machinery, etc., by the presentation to their friends of a little monograph entitled: "Helps in the Game of Poker." As this is a little game not known to Hardwaremen, their missionary effects are commendable.

The partnership existing between W. V. Taylor and J. A. McKinley, Allegheny, Pa., under the firm name of the Taylor Hardware Co., has been dissolved by the sale of the interest of W. V. Taylor to O. C. Taylor. A new partnership has been formed between O. C. Taylor and J. A. McKinley, under the same firm name of the Taylor Hardware Co., to carry on the business of the old firm.

Walter Cobb, Jr., Brockton, Mass., will soon put a new file on the market, which he claims will be a boon to all who work on soft metals, and that it "will file lead, wood, copper, brass or any soft metal without clogging; filings free themselves as easily as iron or steel filings from the ordinary files and rasps."

Crannell Morgan, who has for some time represented the W. Bingham Co., Cleveland, Ohio, in Western New York State and Northern Pennsylvania, on the first of February, left their employ to take charge of the business of the Ohio Glass & Hardware Co., Akron, Ohio.

Unique and attractive showcase mats have been prepared by the Pike Mfg. Co., Pike Station, N. H., for the purpose of showing their Scythe Stones, Table Hones and Oil Stones. These mats are 10 by 14 inches and made of dark material, with background of a lighter color.

George H. Sargent, of Sargent & Co., New York, has departed for a trip to the Pacific Coast. He was present as a guest of honor at the Hardware dinner, and immediately thereafter started for warmer climes.

REFERENCE BOOK

FOR HARDWARE DEALERS.

To enable them to purchase to the BEST advantage.

The Names of all the Manufacturers, over 15,000, with the Financial Rating of each, including all in the U. S. & Canada of

HARDWARE of all kinds, **IRON & STEEL** of every kind, **TOOLS** of all kinds, **HOUSE-FURNISHING GOODS** of every description, **STOVES, RANGES, HEATERS,** and all kinds of

COOKING APPARATUS, and **UTENSILS, AGRICULTURAL IMPLEMENTS, MACHINES** and **TOOLS,** of every Description, and all other articles handled by the trade.

Cloth Bound, six times size of cut.

THE USE OF THE BOOK.

THE book is minutely classified by an alphabetically arranged index, naming every article handled by these trades. For instance: If you wish to find all the manufacturers of wire fence, you turn to "Wire Fence" in the alphabetical index and it will show you all the manufacturers of wire fence in the United States and Canada, arranged alphabetically by States, and the amount of capital invested by each in the business, showing which is the largest, etc. If you desire to know who makes the "Eureka" brand of fencing, you can find it in the same way. The same applies to every article and every special kind or brand of article handled by these trades.

A subscription to the book includes the free use of our library of Directories, Reference Books, Catalogues, etc, for any information desired.

For Sale by the Hardware Publishing Co., 143 Chambers St., New York.

Price $5.00, Express prepaid to any part of the U. S.

Also, Directories of Hardware Implements and Sporting Goods Dealers of the U. S. and Canada, with ratings.

Record of Changes.

Cambridge, N. Y.—Robert Watkins has opened his Hardware store, recently purchased of H. R. Eldredge & Co.

Chillicothe, Ohio. — Gillum & Secrest, Hardware, which was dissolved by the retirement of Mr. Secrest, will be carried on by Gillum and Albert Spetnagel. The new firm will be known as Gillum & Spetnagel.

Corry, Pa.—Barlow, Brigham & Follett Co., Hardware, reported having dissolved partnership.

Dawson, Pa.—C. O. Schroyer has taken charge of the Hardware store recently purchased from C. C. Ruse & Sons.

East Bloomfield, N. Y.—John O'Neil has purchased a one-half interest in the Hardware store of Daniel McWilliams.

East Palestine, Ohio.—Hugh J. Fraser has purchased J. C. Taggart's interest in the Hardware business of Fraser & Taggart.

Fort Madison, Iowa.—J. W. Connelly, of West Point, Ill., has purchased a half interest in the Link Hardware Co., and the firm name in the future will be Link & Connelly.

Grand Rapids, Mich.—D. J. LeRoy, formerly with Vander-Veen & Witman, has gone into partnership with J. K. Failing, the South Division Street Hardware dealer.

Greenwood, N. Y.—The Hardware firm of Smith & Shaw have been dissolved, Mr. Smith retiring; and Charles Austin has become a member of the firm of Shaw & Austin.

Hamilton, Mo.—F. A. Martin & Co., Hardware, reported as having dissolved partnership.

Kingston, N. Y. — The old-established Hardware business of Jansen Hasbrouck has been purchased by Conrad E. Hasbrouck.

Kingston, N. Y.—The firm of McMillan & Johnston, the Hardware merchants, have dissolved, the retiring member being Mr. McMillan. The business will be continued by Mr. Johnston, who will have S. D. Coykendall as a special partner.

Mansfield, Pa.—Jacob Schieffelin has sold his Hardware business at Tioga to ex-Commissioner William Kimball.

New Wilmington, Pa. — The Hardware store on the east Diamond has changed proprietors. J. A. Gleen has sold it to Barnes Bros. and they have taken charge.

North Franklin, Me.—C. M. Davis has sold his Hardware business to the Phillips Hardware Co.

Owatonna, Minn.—Thon Bros. have dissolved partnership, and hereafter the Hardware business will be carried on by John Thon.

Salem, Mass.—The Salem Hardware Co. are to go out of existence, and this firm will be succeeded by Frank S. Fowler and John Morrison, the latter having been identified with the business for some time, in company with Mr. Murphy, who has retired from the firm.

Schoharie, N. Y.—A. M. Allen, for the past fourteen years in the Hardware business at Prattsville, will sell out and remove to Conesville.

Shinglehouse, Pa.—F. E. Gale & Bro. have removed their stock of Hardware to Genesee Forks, Pa. Frank E. Gale has moved there and will have charge of the new Shinglehouse store.

Sparta, Wis. — Edward Everett's Hardware store has been bought by William Noble.

Springfield, Mass. — Charles C. Lewis, Hardware, Nos. 30 and 32 Lyman Street, succeeded by the Charles C. Lewis Co.

Sunnyside, Wash.—Fred Crabbe has sold his interest in the Sunnyside Hardware Co. to the senior partner, Bruce M. Brewer, who will conduct the business alone.

Templeton, Mass.—The firm of Smith & Haskins, at the Highlands, dealers in Hardware, etc., has been dissolved by the retirement of Mr. Haskins, and a new firm has been formed, under the name of Smith & Jefts, who will continue the business at the old stand.

Trenton, Mo.—Will Berry has purchased the entire Hardware stock of P. W. Bain & Son.

Watertown, N. Y.—The firm of Sponenberg & Waddingham, Hardware dealers, have dissolved. Fred Waddingham retires, and H. M. Sponenberg continues the business.

Waukegan, Ill.—R. T. Perine, Hardware, sold out to James F. Hull and Harry A. Bangs, and will retire from business. The name of the new firm is Hull & Bangs.

West Randolph, Vt.—C. C. Whitten, of the firm of Whitten & Temple, Hardware merchants, has purchased his partner's entire interest in the business and taken possession of the store.

Record of Improvements.

Eureka, Ill.—W. H. Peard has moved his Hardware store into the building he purchased a few months ago.

Fort Edward, N. Y.—Mayor Bowtell is improving the appearance of his Hardware store by having a hardwood floor laid therein.

Gap, Pa.—C. L. Kauffman & Co. will remove their Hardware store into the Post Office block after the present repairs and changes are completed.

National City, Cal.—The Hardware firm of Mudgett & Nichols have moved their stock of goods into the Steel block, on National Avenue.

Ottoville, Ohio.—Charles Wannemacher & Son have moved their Hardware store to their new building, and are getting things in good shape.

Pueblo, Col.—Andrus Brothers, dealers in shelf and heavy Hardware, have moved from No. 120 West Fourth Street to No. 115 West Fourth.

Sodus Centre, N. Y.—R. S. Borradaile has changed his stock and moved into his large new Hardware store, with tin shop in the rear. He intends to keep a regular line of Hardware, stoves, tinware, etc.

Terre Haute, Ind.—Finkbiner & Duenweg, Hardware merchants, have leased the building recently occupied by Swope & Co., jewelers, and will enlarge their business.

Business Embarrassments.

Hamilton, Canada.—The Hardware firm of Bowman & Moore have made an assignment to T. H. Pratt for the benefit of creditors.

McConnellsville, Ohio.—F. C. Burckholter, dealer in Hardware, has made an assignment for the benefit of his creditors. The business has been reorganized under the name of the Burckholter Hardware Co.

Moscow, Idaho.—M. J. Shields & Co., Hardware and implements, closed by sheriff on attachments issued against them for $55,000.

Mt. Holly, N. J.—Samuel T. Engle, Hardware and agricultural implement dealer, has made an assignment. The preferred claims amount to $8000.

Parkersburg, W. Va.—C. J. Bosbury & Son, the well-known Market Street Hardware dealers, whose store is a No. 609 Market street, have made an assignment for the benefit of their creditors to W. N. Miller, trustee.

Burglaries in Hardware Stores.

IF THE DUPLICATE ORDERS

which we are daily receiving for **New Clippers** are any indication of business, there is little doubt but we shall be crowded to our utmost capacity to supply our trade again this season, notwithstanding our increased facilities. The Hardware trade are beginning to realize that it pays to place their orders

FOR OUR BICYCLES

with the maker direct, as he gets certain favors and advantages which are impossible from any other source. We try to please our trade. If **any responsible** dealer will send an order for any one of our wheels, we will agree to send it promptly, and if he does not believe it to be worth the price we ask, he may return it at our expense.

BICYCLE TRADE RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Stores, Etc.

Boston, Mass.—The Ramsdell & Rawson Co., incorporated, with Otis Rawson, president; F. M. Ramsdell, vice-president, and L. W. Rawson treasurer and general manager. The capital stock is $5400, and the company will manufacture bicycles and do repairing, manufacture rubber tire wheels and do a general machine jobbing business. Their principal place of business will be at Worcester, Mass.

Cleveland, Ohio.—The Winton Bicycle Co. have opened a new bicycle and riding school in the old Cyclorama building, which has a floor of 14000 square feet. The Winton Co. have coined a new word, and called their school the Biclorama.

Fitchburg, Mass.—S. T. Francis, bicycles and sporting goods, has opened a new store in the Y. M. C. A. building.

Franklin, Ind.—Harry Bridges and Nat Lacey, under the firm name of Bridges & Lacey, will open a new bicycle store and will have a repairing department. They will also do a renting business. Correspondence invited with manufacturers of bicycles and bicycle sundries.

Middletown, Conn.—The Middlesex Rubber Works will open a New York agency, and will commence the manufacture of tires for bicycles. The capital stock of the company is to be increased.

New York, N. Y.—Arthur Collins & Co. will open a new bicycle store and riding school at the corner of Eighth Avenue and Twenty-third Street. They have recently entered into a contract with the Pope Mfg. Co. to handle the Columbia.

New York, N. Y.—The Pierce-Thompson Cycle Co. is the name of a new combination, with stores at No. 107 Chambers Street and No. 91 Reade Street, controlling all down town territory for the Pierce cycles.

New York, N. Y.—William Stellwagen, No. 15 West Twenty-seventh Street, is reported to be organizing a company to manufacture a new patent bicycle, dispensing with the pneumatic tire.

Northampton, Mass.—The Hampshire Cycle Co. is a new firm, composed of Tainton, McAlpine and C. E. Herrick. The new concern will manufacture and deal in bicycles.

Oswego, N. Y.—The C. B. Rice Bicycle Co. have secured quarters, consisting of 4000 square feet of room, in the Oswego Machine Works. Nearly all of the new machinery is in place and running. Delay caused by a fire puts the company behind in its work, and the employees are now working night and day to catch up.

Parsons, Kan.—Johnson & Steele, bicycles, etc., have opened business.

Portland, Me.—W. I. Twombly is reported organizing a stock company to manufacture bicycles, pleasure launches, etc.

South Manchester, Conn.—F. T. Blish, bicycles, sporting goods, etc., is preparing to open a new store.

Springfield, Mass.—F. M. Coe & Co., new bicycle firm, composed of Frank M. Coe and Orville P. Townsend. They will handle the Columbia wheels.

Syracuse, N.Y.—The Barnes Bicycle Co., recently reported incorporated, with a capital stock of $100,000, has elected the following officers: C. F. Saul, president; H. S. White, vice-president; C. A. Bridgeman, secretary and treasurer.

Syracuse, N. Y.—D. McCarthy & Co. announce their intention of going into the bicycle business, with A. E. Post in charge.

Syracuse, N. Y.—Dey Brothers & Co. announce that they will establish a bicycle department, having arranged to handle a wheel manufactured by the National Sewing Machine Co., at Belvidere, Ill. They will also handle sundries and maintain a bicycle repair shop.

Toledo, Ohio.—Al. Peter will commence the manufacture of bicycles. Twenty thousand dollars worth of machinery has been purchased for this purpose, and the new plant will be run in connection with a sewing machine factory of the Union Mfg. Co. Two hundred men are to be employed.

Utica, N. Y.—Charles H. Child & Co. will add a bicycle department, doing a jobbing and retail business in bicycles and sundries. Bradford R. Devine, formerly with A. G. Spaulding & Bro., of New York, will be manager of the department.

Villisca, Iowa.—C. W. Brelsford, Hardware and vehicles, has opened a new store, and will take up bicycles. Correspondence is invited with manufacturers of bicycles and bicycle sundries.

Washington, D. C.—C. L. Palmer & Co., bicycles, are preparing to open a new store at No. 431 Tenth Street, N. W.

Washington, D.C.—William T. Robertson & Co., manufacturing the Elk bicycle and bicycle sundries, are preparing to commence business at No. 429 Tenth Street, N. W.

Worcester, Mass.—The Spiers Mfg. Co., sporting goods, opened a new store at No. 279 Main Street. The primary object of the new enterprise is the sale of the company's bicycles. In addition will be carried a full line of sporting goods.

Changes and Removals.

Champaign, Ill.—F. A. Wilske & Co. bicycles, succeeds F. A. Wilske, John Beardsley having been admitted to an interest in the business. The new firm are making considerable improvement in the salesrooms.

Chester, Pa.—Thomas Swanger, bicycles, will move to larger quarters in the James building, No. 514 Market Street. He will make a specialty of bicycle repairs.

Cheyenne, Wyo.—Duffy & Erswell, bicycles, have been succeeded by Alex. Duffy.

Chicopee, Mass.—The Lamb Co., manufacturers of bicycles, sporting goods, etc., have moved into new factory building and are now in operation.

Elizabeth, N. J.—F. C. Gilbert & Co., bicycles, bicycle sundries, etc., are succeeded by the Gilbert & Chester Co.

Peoria, Ill.—Rouse, Hazard & Co. announce that they have begun to manufacture their own wheels instead of having them built by other makers. This firm is now entering upon its sixteenth year.

Richmond, Ind.—F. E. Henderson & Co., bicycles, etc., are arranging for a location of works, and will transfer the entire business to this city.

Santa Barbara, Cal.—C. R. Jordan, bicycles, is succeeded by Jordan & Co.

Thompsonville, Conn. — The Wooden Frame Bicycle Co., of Boston, will probably locate its plant in this place. Negotiations ard now pending between representatives of the company and prominent business men.

Waco, Tex.—A. Q. Woodworth, bicycles, is succeeded by the Woodworth Cycle Co.

Washington, D. C.—F. S. Cahill & Co., bicycles and sundries, at No. 1711 Pennsylvania Avenue, dissolved co-partnership. George W. Ribble and Lewis Miller retire from the firm. Frank S. Cahill will collect all debts and pay all liabilities.

New Goods and Improvements.

Brooklyn, N. Y.—J. H. Williams & Co. are putting on the market an improved bicycle wrench.

Recent Fires.

Port Huron, Mich.—George Yokom, bicycles, store on Sixth Street, was damaged by fire to the extent of $600. No insurance; policies having expired January 1st and not renewed.

Miscellaneous.

Chester, Pa.—Thomas L. Briggs, bicycles, has signed a contract with the Pope Mfg. Co. for the handling of the Columbia.

Davenport, Iowa.—C. W. Pierce desires correspondence with manufacturers of bicycles and bicycle sundries.

Michigan City, Ind.—Smith & Ball, superintending the bicycle factory in the State Prison, announce that the factory will be in operation within a month.

New York, N. Y.—Adjustable Easy Riding Saddle Co. are endeavoring to interest additional capital in their enterprise. George B. Throop, president of the American Typewriter Co., is the principal party interested in this company. Recent changes have been made in their saddle, having lightened it three-quarters of a pound.

Thompsonville, Mass.—The League Bicycle Co., of Hartford, Conn., reported negotiating, looking to the transfer of the plant to Thompsonville.

Wappingers Falls, N. Y.—S. R. Brown is offering a bicycle tire factory for sale or rent.

Los Angeles, Cal.—An attempt is being made to form an organization of the cycle dealers of this place. The object is to establish a uniform price for all wheels of the same grade, regulate the payment system and the guarantee, and to take such other action as seems best for the trade. All dealers in Southern California are eligible, and are invited to join the association.

HARDWARE DEALERS SHOULD HANDLE

HELICAL PREMIERS, 1895.

American-made throughout. All constructed of our famous Helical Tubing.
Up to date in every particular. Lightest and Strongest.

All One Price, $100.

Roadster

28-inch wheels; 9½-inch head; 23-inch diagonal; 43½-inch wheel base; swaged spokes; 24 and 32; wood rims; dust proof bearings; dtachable sprockets; T saddle post; gear 64, 68 or 72 as desired; 18-inch handle bar, raised or dropped; tread, 5½ inches. Weight, 18 to 20 lbs. **$100.** Brake and guards fitted if desired.

Racer

26-inch wheels, other details as above, lightest tires and saddle. Weight, 16 lbs. **$100.**

☞ **It was on a Helical Premier Racer that Wheeler beat Zimmerman two straight races. VERB SAP!**

Ladies'

26-inch wheels, double, drop-frame of Helical Tube. Weight, complete with chain and wheel guards brake and foot rests, 20 lbs. **$100.**

By the use of Helical Tubing we build a drop-frame that is as stiff and strong as a diamond. Ladies who wish to ride on equal terms with gentlemen, but who object to "bloomers" will do well to note this fact in choosing their 1895 mount.

Here's the Proof.

We claim that our Helical Tube is far stronger than weldless tube and hence more desirable for the frames of bicycles. Business claims, however, have not always been substantiated and as some of our competitors (all of whom are confined to the use of ordinary tubing) have made misstatements about Helical Tube, we have submitted to the highest recognized authority, the Government of the United States, bicycle frames and tubes constructed of Helical and the best grades of weldless for test. A copy of the official report will be found in our reading columns, page 55.

THE HANDY STOVE POLISHING MITTEN.

The above illustration will give a fair idea of its appearan e. It will easily fit the hand, has a waterproof back, and the whole front is made of durable and soft sheepskin, tanned with the wool on. By using the Stove Polishing Mitten, blacking a stove ceases to be dirty and disagreeable, it will make a stove shine like a mirror. The Mitten is also useful for polishing household furniture. It cannot scratch the most delicate material or varnish, while the finest possible polish can be rendered.

The Polishing Mitten can be put to many uses. Sells to almost every person you meet, always gives satisfaction. Among the uses which it may be put are:

Polishing Stoves, Ranges, etc , it has no equal.

Cleaning and Shining Windows, Show Cases, and other Glassware, the Mitten is highly satisfactory.

Polishing Nickel-Plated Ware, such as Bicycles, Machinery, etc., the Mitten is becoming more popular daily.

Polishing Boots and Shoes, the Mitten is as much superior to a brush as a brush is to a stick. Where once used it is "a joy forever."

Cleansing and Polishing Furniture, use the Mitten and Dauber. The results are always pleasing.

Polishing Brassware, Tinware, etc., the Mitten serves the purpose better than anything else.

Manufactured expressly for the trade. They sell fast wherever introduced to HARDWARE DEALERS.
We will quote you low prices and only ask a trial order. 2 kinds of mitten and dauber made, both kinds samples 30c. to Dealers.

PERSISTENT

Enterprising people are beginning to learn the value of advertising the year round. The persistency of those who are not intimidated by the cry of "dull times," but keep their names ever before the public, will surely place them on the right side in the end. Think over the persistent advertisers you know.

OUR STEER HEAD BRAND

of Butcher Knives are made of the **Best Double Shear Steel** obtainable. The greatest care is exercised in every branch of their manufacture and every knife severely tested before leaving our factory.

They are made in sizes from 6 to 14 in. and are especially designed for butchers or others who want the best knife made, who know a good knife when they use it and are willing to pay a fair price for a knife that suits them.

Dealers are authorized to sell these knives with the understanding that if after a **fair trial** purchaser is not satisfied it is the best knife made anywhere he shall bring it back and get his money.

Necessarily such a knife sells at a high price, but it is the cheapest in the end, and there is a good profit to dealer.

They are Clean and Odorless. Require no more care than an ordinary lamp. Cylinders of Russia Iron, with Removable Nickel Tops, or with Combination Heating Drum and Grate for Cooking. The No. 3 BURNERS have a FLAME OF 15 SOLID INCHES. "MILLER" HEATERS have outside SCREW ADJUSTMENT for regulating the Wick and PLUNGE MOVEMENT FOR EXTINGUISHING; each one is supplied with an extra Flame Spreader so that Lamp can be used for ILLUMINATING when not wanted as a Heater. All of the Best Material and Workmanship.

They will heat a large room perfectly. A tea kettle of water heated in a few minutes by removing canopy.

Perfectly Safe. They Cannot Explode. Oil Never Gets Hot in the "Miller" Heater. A Good Companion for a Cosy Nook. A Comfort on a Chilly Morning.

READY TO LIGHT, WITHOUT REMOVING CHIMNEY.

A MOST IMPORTANT FEATURE.

☞All the weight of the Cylinder rests solidly on the FOUNT and not on the BURNER in these Heaters.

In IMITATIONS of these Heaters the Cylinder is supported on the BURNER, a CHEAP and WEAK CONTRIVANCE, which makes it necessary to REMOVE THE CYLINDER for lighting and which renders it impossible or very dangerous to use the Heater for cooking purposes.

Send for circular showing Heaters with ovens for cooking. We have 12 varieties.

These Lamps hold One Gallon of Oil. Will Burn 12 hours. Easily Lighted by Lifting Top of Burner.

——MANUFACTURED BY——

A Mistaken Notion.

It is a mistaken notion that a fine store in an eligible location, surrounded by attractive signs, is a superior advertisement; for the experience of the most enterprising merchants is that it pays better to spend less in rent and more on advertising.

There is a Better Profit

To the dealer in this Wringer than in any other, and he can sell MORE OF THEM. Each one sold helps to sell more. Try it and see.

THE trade-mark most familiar to the sportsmen of the United States is the **"U. M. C."** of the Union Metallic Cartridge Co., of Bridgeport, Conn. It stands for the highest excellence of sporting ammunition for Rifle, Shotgun and Revolver. The favorite paper shot shells bearing

the U. M. C. stamp are the "Trap," "Smokeless," "Walsrode," "Black Club," and "New Club." In your shooting, as in everything else, use the best. To make sure of the best ammunition, always ask your dealer for U. M. C. goods.

The Union Metallic Cartridge Co.

NEW YORK OFFICE, 313-315 Broadway. SAN FRANCISCO OFFICE, 517-519 Market St.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded **ORANGE RIFLE EXTRA.**

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - 29 Murray Street, New York City.

BRANCH OFFICES:

CHICAGO, ILL. DUBUQUE, IA. CINCINNATI, O. NASHVILLE, TENN.

THE SCHULTZE SMOKELESS GUN POWDER CO. LTD.

OF

LONDON, ENGLAND,

BEG TO ANNOUNCE THAT THEY HAVE PLACED ON THE

American Market

Their First Shipment of

HARD GRAIN SMOKELESS SCHULTZE GUN POWDER

Which has been specially regulated in strength and moisture for the American climate

In the manufacture of their **Hard Grain** powder they have embodied all the advantages that their long experience together with the latest modern improvements in powder making has shown to be the very best.

HARD GRAIN SMOKELESS SCHULTZE POWDER retains all the good qualities which have made Smokeless Schultze Powder famous all over the world, while its hard flinty grain and specially regulated moisture makes loading so easy that any amateur can now do so successfully

Variations in pressure on wads, or atmospheric conditions do not affect the shooting and loads may be varied as much as with black powder.

Hard Grain Smokeless Schultze is the most modern, the best of all smokeless powders, and excels any other Nitro powder in velocity, penetration, cleanliness, regularity and closeness of pattern.

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

BABBITT METAL.

We make Babbitt and Anti-Friction Metals by standard formulas, and never vary the formula to fit the price. The result is that our Metals are always the same uniform high quality, and we hold our trade.

Save fuel, machinery, time and annoyance by using Babbitt or Anti-Friction Metal that is adapted to the particular Journal in which it is to be used. Friction means loss of power.

Get our pamphlet on Anti-Friction Metals.

Continuous Roofing Tin.

CONSIDER EVERYTHING and see if you don't find it cheaper and better to use "TANDEM" than to use any other equal grade of roofing.

It is easier to lay than ordinary roofing and it makes a better roof.

Our "TANDEM" is made in sheets 20 and 28 inches wide and 96 inches long. The seams are locked together, end to end, making a straight continuous course containing 100 square feet. The seams are soaked on both sides during the coating process, and are as strong and impenetrable as the solid sheet Such courses are particularly useful in gutters and valleys.

It is ready to use the moment you unroll it. No re squaring, no trouble, no lost time, no waste tin. Every inch of it goes directly on the roof in absolutely straight courses.

It affords a saving of labor and solder. A square of it will cover more roof than a square of 20x28 loose sheets. These are the reasons why every roofer should use it.

There are other points worth considering: (1) While all the plates are full weight (I C thickness), the shipping weight of a square of "TANDEM" is less than that the same quantity of 20x28 sheets. (2) We can ship direct to where the goods are to be used. If you're working away from home this saves freight charges, double handling, and time. If you care to know more about "TANDEM" CONTINUOUS ROOFING TIN write us. Prompt shipments can now be made.

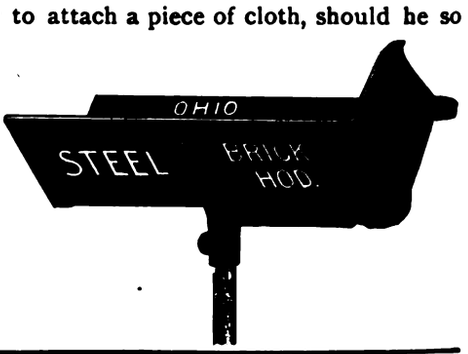
OHIO "WATER TIGHT"



STEEL MORTAR and BRICK HODS

OHIO "Water Tight" Steel Hods are from 25 to 50 per cent. lighter when in use than the common wooden Hod.

Ohio "Water Tight" Steel Hod bodies are positively Water Tight. These bodies are the only ones made, folded from a single piece of sheet steel without cutting the metal, are reinforced on the edges and at the dumping point By our special devised machinery we are enabled to furnish the strongest, lightest, most durable and only double end mortar and brick hods offered to the trade.

Our improved Malleable Iron Fork and Wooden Shoulder Saddle make it easier for the user to carry, or to attach a piece of cloth, should he so desire, to the under side of the saddle than the old style.

With our improved one piece Malleable Iron Fork and socket for holding the hardwood handle and taking up the shrinkage, a broken handle can be readily replaced, and hods shipped knocked down.

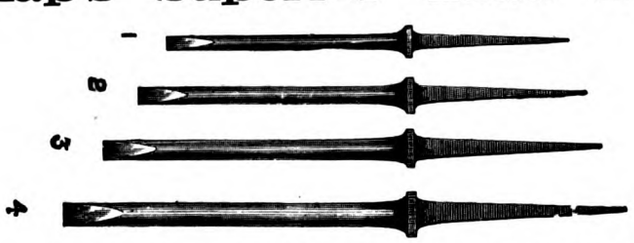
NEW YORK, 26 Park Place. BOSTON, 160 Congress St. PHILADELPHIA, Room 710, Betz Bldg. CHICAGO, 204 Masonic Temple.

Main Office and Factories, Meriden, Conn.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.

THE

AMERICAN WICK



Made by the

WICK DEPARTMENT

Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

The Hardwaremen of New England, like their friends of Philadelphia and New York, endeavor to beautify the details of dry business by an occasional social reunion. Within several days past three festal gatherings have occurred in that section, detailed reports of which are found elsewhere. The members of this great trade have been a little late in discovering that all work and no play dulls Jack's intellect, and they seem anxious to make up for lost time in the fervent pleasure of the present. Their endeavor is not misplaced. The good results of these gatherings are so patent that their continuance in the future is certainly assured.

The gentleman from Lowell, whose speech is given in full in our report of the New England Hardware dinner, expressed some sentiments which cannot be too carefully considered in these times when so many vital questions demand the attention of American citizens. Mr. Stevens presented with considerable force some things that cannot be much longer ignored.

Reports from various sections of the country show a little better feeling as to the business situation. In most cases hope and expectancy are modified by the little word "if"—generally used in about this shape: "If Congress——;" but it must be remembered that in many cases prosperous times have come despite Congress.

The Lesson of the Department Store.

There has been for some time a growing anxiety on the part of conservative dealers in Hardware in such large cities as are actively increasing in population—in regard to the inroads being made by the department stores on the sale of those specialties in several lines—which being new and attractive, make them worthy of being marketed at a fair profit.

The department stores, having so large a field for the cultivation of traffic, are prone to cut down the natural profit and look for larger sales to remunerate them; and this system is just the reverse of that pursued by the more methodical dealer in Hardware, who really believes in his inmost heart, that nobody would buy a thing he did not really want, at any price; and so makes a selling price which includes a profit, believing if the purchaser needs the article he will buy to supply his needs. Herein it seems that his conservatism is at fault, having been founded in the early days when wages were smaller and novelties were few, necessities only being sought after, and even those who could have purchased such necessary articles of a fairly luxurious character, lived much more plainly in their happy domesticity than the clerk of to-day, who finds a salary of $1500 a year insufficient to make his life one of comparative comfort in a flat, rented at $35 a month.

And yet, in this very stimulation of the wants of the masses, which is the secret of the success attending the sales of department stores, there is a method teaching a lesson to the older dealer. Greater sales create greater purchases, and the buyer of lots of ten to twenty-five gross is entitled to prices which such dignified quantities should readily suggest, while the buyer of single dozens or quarter grosses of the same goods, catering as he does for the deserving few and not the countless bargain hunters, must purchase in a manner that inspires no intention of sacrificing full commissions.

We must face the fact that there is for him a lessening ratio of profits all along the line. It is no longer possible to do his usual amount of business in gross sales, and declare satisfactory dividends. Low prices on the products of our factories have come to stay, and close profits will henceforth be the rule instead of the exception. The American characteristic to-day is to increase the output and find new methods of distribution, new channels of traffic, rather than restrict a healthy production, and sit down contented, believing our business ambition is at least fully gratified.

The old-fashioned dealer must adopt the plans and systems of the department store hustler, and on articles of active competition be satisfied with a much smaller average profit; while the necessarily slow moving articles, found nowhere else but on his shelves,—articles in which skill in manufacture and a standard for excellence combine to deserve the commendation of intelligent buyers—should be sold at an advance on cost which their relative importance and slow sale should

Digitized by Google

entitle them to. Goods which everybody sells, creating an unhealthy competition, should be sold at a close margin, thus inspiring that confidence in the watchful buyers which causes them to buy from him such goods as skilled intelligence considers requisite, without the opportunity of comparing his selling prices with the current newspaper quotations of the "Cheap John" of the multitudinous bargain counter.

A Hardware Club for Chicago

The Hardwaremen of Chicago are waking up to the fact that in organization lie many benefits to all concerned. In an exchange from that busy city we find an article headed: "Why not have a Chicago Club?" Why not? The officers of New York's famous club will be only too glad to furnish points to their brothers of the West. The writer above quoted, continues: "Western Hardwaremen who go East return singing the praises of the Hardware clubs of New York and other sea board cities, whose hospitalities and benefits they are permitted briefly to enjoy, and not a few rather prefer to be in New York about the time any notable club event occurs in order that they may breathe this genial air of clubdom. It is grateful to their senses and satisfying to the eternal fitness of things. These clubs are of recent date. A few years only marks their span of life, but how rapidly they have grown in popularity, in power and in usefulness. . . . There are in this city several hundred wholesale dealers in iron, manufacturers of iron and representatives of Eastern concerns who would make eligible members of an organization of this kind. There are, also, scattered throughout the West in territory tributary to this city, many iron men who would appreciate the club and cheerfully co-operate in making it a success. The benefits would be numerous. The club would be a common meeting ground for Hardwaremen, and association in a score of ways, as has been amply demonstrated in the East, would redound to the lasting benefit of members. . . . Hardwaremen of Chicago and vicinity, do you want a club?" Of course they do.

Hardware Festivities at Springfield.

The Hardware Social Club of Western Massachusetts, including Springfield, Westfield, Holyoke and Chicopee, held their regular meeting at the Board of Trade rooms, Springfield, on February 12th. The business meeting was held in the afternoon, and in the evening the Hartford Hardware Association were entertained at supper in the Massasoit House. Some short speeches were made. C. J. Blackstone, Springfield, is president of the club, and J. Douglas Law, Springfield, secretary.

Hon. Joseph Banigan, president of the American Wringer Co., will build for himself during the coming spring a residence at Woonsocket, R. I., at a cost of $50,000. Mr. Banigan has also a fine residence in Providence, R. I., and is known there for the elegance of his entertainments and his hospitality. He is a millionaire and possesses positive shrewdness in business matters.

On the morning of January 6th the handle factory of Gilbert & Young, Findlay, Ohio, burned to the ground, entailing a total destruction of stock, buildings and machinery. An increase of gas pressure during the night was the cause assigned for the fire starting. The loss was about $6000, with no insurance.

Yale & Towne's Buffalo Office.

The Yale & Towne Mfg. Co., under date of February 1st, make the following announcement in regard to their Western business: "We beg to announce that for the better conduct of our business in Buffalo, Pittsburgh, Cleveland and adjacent points, we have opened an office in the Builder's Exchange, Buffalo, and have appointed as manager thereof J. M. Wilson, for many years connected with our houses in New York and Chicago. The office heretofore maintained by us in Pittsburg (in large part for the conduct of our crane business, which we have recently disposed of) has been closed and merged with the Buffalo office. The purpose of these changes is to enable us to give closer and better attention to the conduct of our business with customers in the territory of which Buffalo is the central point. The new office in Buffalo will be equipped for the efficient conduct of our correspondence, exhibition of samples and transaction of general business relating to all our products. Its relation with our general offices at No. 280 Broadway, New York, and with our works at Stamford and Branford, will be such as to ensure the prompt and careful execution of all orders. The manager, Mr. Wilson, hopes within a short time personally to call on many, if not all, of our customers whose business will be transacted through our Buffalo office, and will be pleased always to receive them when they can make it convenient to call at that office."

A New Hardware Association.

We welcome to the company of Hardware Associations of the United States and Canada, the newly formed St. John Iron & Hardware Association, of St. John, New Brunswick. This new organization is for the purpose of social intercourse, discussion of all matters of interest to the trade, the fixing of prices, regulation of freights, etc. All houses engaged in the iron or Hardware trade of St. John are eligible to membership in this organization. The officers are as follows: President, W. H. Thorne; vice-president, S. Hayward; secretary and treasurer, J. J. Barry. Directors: Thomas McAvity, R. B. Emerson, F. Beverly. Executive Committee: W. H. Thorne, S. Hayward, Thomas McAvity, R. B. Emerson, F. Beverly and J. J. Barry. The annual meetings will be held on the second Monday of January on each year, and regular meetings on the first Monday of each month.

An Export Consolidation.

It is reported that Flint & Co., and Coombs, Crosby & Eddy have consolidated their business under the new style of Flint, Eddy & Co., with a capital of $3,500,000. Both firms have done a large business for many years with the Latin American countries and the British colonies. Owing to the curtailment of demand in the United States, American manufacturers are now seeking foreign outlets, and this consolidation is designed to meet the increasing export trade. The business of Coombs, Crosby & Eddy was started thirty-seven years ago by Congressman W. J. Coombs. The business of Flint & Co. was founded in 1840 by Benjamin Flint. The principal parties in interest in Flint, Eddy & Co., are Ulysses D. Eddy, Charles R. Flint, the Hon. William J. Coombs, William Marshall, Henry F. Crosby, Alfred De Buys, Thomas A. Eddy and Wallace Benjamin Flint.

Mention was made in the issue last preceding, of the death af John Adt, of John Adt & Son, New Haven, Conn. The business will be continued as heretofore, under the management of A. G. Adt, who has been associated with the firm for the past twelve years, and under his active management all future orders and inquiries will receive the same promptness and attention that has been given those of the past.

Western New England

HAS ITS TURN AT BANQUETING AND SPEECH-MAKING.—ANNUAL MEETING AND DINNER OF THE WESTERN NEW ENGLAND IRON, STEEL AND HARDWARE ASSOCIATION IN NEW HAVEN.

The annual meeting and banquet of the Western New England Iron, Steel & Hardware Association, was held in the Republican League, on Chapel Street, New Haven, Conn., on Friday, February 15th. The meeting was not a large one, only sixteen delegates being in attendance. But what it lacked in members was made up by the hard work and enthusiasm of those present. On account of the absence of the president, L. L. Ensworth, the vice-president, S. S. Hunter, acted in his stead.

At the business meeting, which was held in the morning, it was unanimously decided to maintain prices. The following officers were elected for the ensuing year: L. L. Ensworth, of Hartford, President; S. S. Hunter, vice-president; R. S. Woodruff, of New Haven, secretary; C. C. Lewis, treasurer. A board of directors were also chosen. At 2 o'clock the delegates filed into the dining-room and sat down to a bounteous repast. The hall was handsomely decorated with palms, and in the center of the table stood a large vase filled with roses and carnations. The menu is here given:

MENU.

Little Neck Clams. Tom Gin. Cock Tails.
Soup. St. Julien.
Red Snapper. Parisienne Potatoes.
Chicken Croquettes. French Peas.
Capon. Mashed Brown Potatoes. Asparagus.
Jelly. Celery.
Roman Punch.
Chicken Salad.
Frozen Pudding. Cake.
Fruit.
Club-house Cheese. Bents' Crackers.
Coffee.
Wines and Cigars.

The following are the names of those present: E. L. Haley, president of the New England Iron & Hardware Association, Boston; R. H. Boutwell, C. C. Lewis, F. W. Hallock, H. L. Russell, H. H. Ensworth, son of the president, H. H. Ensign, F. H. Butts, secretary of the New England Iron & Hardware Association, Boston; Samuel Dudley, A. H. Downs, F. W. Parmalee, M. H. Tanner, W. P. Ensign, L. H. English, R. S. Woodruff, Mr. Chapman and R. H. Spurgeon, of HARDWARE, New York. All expressed themselves as satisfied with the working of the Association, as it tended to shut out New York competition which has been felt considerably in some parts of New England. R. S. Woodruff favored the formation of a central association, by the members of the Western New England Hardware, Iron & Steel Association becoming members of the New England Iron & Hardware Association, and vice versa. At a few minutes of five the company dispersed, with many expressions of kindly feeling and regret. The next meeting will be held in Hartford about the end of March.

Ohio Hardware Association.

The annual meeting of the recently formed Ohio Hardware Association was held at the Neil House, Columbus, Ohio, on February 13th. From various causes, but fifteen members were present. A number of communications were received endorsing the work of the Association, and expressing regrets from those unable to be present. Many subjects of interest were discussed. The following officers were unanimously re-elected for the coming year:

President: T. J. Morris, Lima, Ohio.

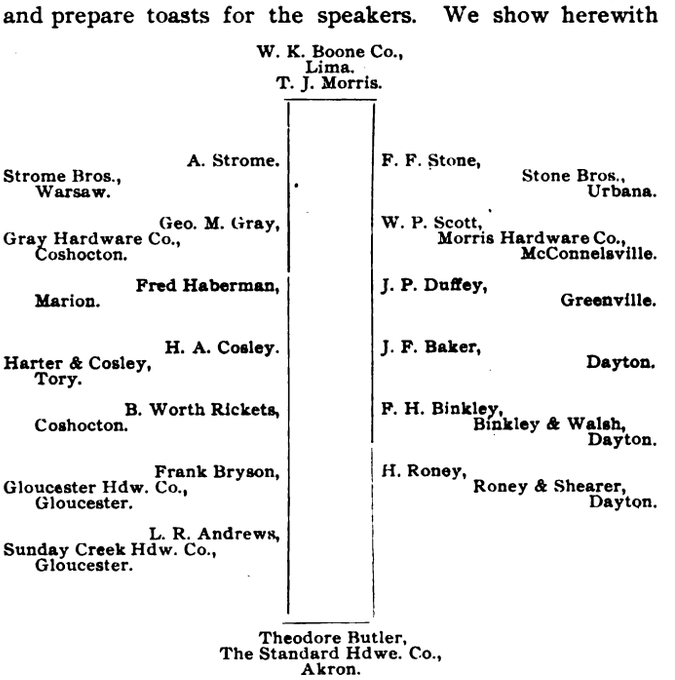
Secretary and Treasurer: Theodore Butler, Akron, Ohio.

Executive Committee: J. H. Kauke, Van Wert, Ohio; F. Haberman, Marion, Ohio.

It was decided that the next meeting should be held at Dayton, the members from that city having volunteered to see to the entertainment of members of the Association. The following resolutions were adopted, and the secretary instructed to send a copy to the Hardware dealers of the State, with the request to signify their endorsement by early application for membership:

MEMBERS.

The Ohio Hardware Association is an association of dealers selling Hardware at retail in the state of Ohio. There are many jobbers of Hardware, who in connection with the jobbing business, have a retail department; in their capacity as retailers we want their co-operation and membership, provided they are willing to endorse the principles of this Association.



PRINCIPLES.

We claim the right to supply our goods to consumers, factories and builders, and we demand protection in this right from those from whom we buy, viz., the manufacturers and jobbers of Hardware. We recognize that competition compels factories to purchase material, which forms a part of their manufactured product, direct from manufacturers or jobbers, and that in this respect, they are entitled to all the privileges of the dealer. We pledge our support and preference to all jobbers and manufacturers who are willing to recognize these principles, and will market their product through the legitimate channels of trade; but will refuse to purchase from those who seek to establish direct communication with consumers.

THE PURPOSE OF THE OHIO HARDWARE ASSOCIATION AND ITS ADVANTAGES TO MEMBERS.

1. Protection of our members from interference with our customers and trade by those from whom we purchase.
2. Influencing efforts against demoralization in prices of leading staples.
3. Protection of members against losses, through bad debts.
4. Combined (influence) efforts in influencing legislation beneficial to our interests in dealing with arbitrary measures of large corporations.
5. Concerted action in favor of condemning changes in established business methods of manufacturers and jobbers.
6. Social intercourse and discussion of the subjects of interest to the Hardware trade.

At the conclusion of the business meeting, the members repaired to the private dining room of the hotel, where a supper was served. This was followed by informal remarks from all present. This social feature was an entirely impromptu affair, and was thoroughly enjoyed by all. The secretary was instructed to arrange for a regular banquet, and prepare toasts for the speakers. We show herewith

the arrangement of the table, and the names of the gentlemen who participated in this little banquet at the capital of the Buckeye State.

Digitized by Google

"Hop's" Corner.

I was very much amused the other day to have a respectable looking old gentleman of about fifty-five, accompanied by another o. g. about sixty-five, call on me in my workshop and ask if the company in whose service I was courting paresis, undertook to manufacture specialties for inventors on a royalty or otherwise. Assuring the gentlemen we were only too glad to earn an honest dollar or two by laboring in that direction, he took carefully out of his pocket what he said was a recently patented "combination oil cloth cutter and circular jaw can opener," which he had been assured by "a number of his lady friends," would revolutionize anything of a similar character now upon the market.

I could scarcely keep my countenance from assuming the appearance of undue hilarity when the gentleman, removing the covering, brought to light a pair of ordinary sardine scissors, having a clumsily contrived catch underneath by which they could be kept closed when necessary; and this was the new patented invention; a more surprised man you never saw, than he was, when I showed him the identical article in several catalogues within reach, and informed him it had been made for thirty years and over without anyone thinking it worth while to patent it for its utility. He couldn't comprehend how they could permit *him* to get a patent for an article of such universal manufacture. I told him I supposed obtaining patents by the payment of the customary fees was easy enough, but defending them was another thing. He, however, had one advantage; he could limit his outlay to the cost he had already incurred, but as an oil cloth separator, the sale, I argued, would not prove embarrassing to ordinary manufacturing facilities.

I thought somebody must have buncoed the ingenious old gent into buying a valueless patent.

There has been for some time an effort made by Patent Commissioner Seymour to secure a division of classification of patents, different from that which at present prevails by which they are classified according to *uses*. There is no systematic method adopted which can determine if a given principle has been patented for any other use than that to which originally it was proposed to be applied, and as an exchange recently observed on this subject: "Some of the experts in the Patent Office sometimes carry principles of this class in their minds, but in other cases they are overlooked until cited in court by some clever attorney who is able to overthrow the claim of originality which has been admitted prima facie by the Patent Office in the grant of a patent. Useless grants and expensive litigation would be avoided if a complete classification by principles was made, and Commissioner Seymour considers this of more importance than some other proposed changes in the law."

Let us hope he will succeed in accomplishing this desirable reform.

We all know the salesman, so clever and smart,
Who believes to each customer, he can knowledge impart;
Who knows he can sell, upon this trip, you bet!
More goods, by a long chalk, than he ever has yet.
But, with all his "close prices,"
To encourage his "biz,"
Expectations measure this size, ————,
His performances this, ——.

In meandering around to lunch recently I noticed a few "curiosities of literature" in the way of the sign makers' art. On a sign near the Cosmopolitan Hotel, the way they spell the just now popular word is "Bycicles." No doubt the article could be ridden just as easily spelled that way; but I am in favor of "Buy Cycles" if any permanent change in the orthography is intended. On a prominent corner in Church Street I noticed "Axe, Pick &c. Handles." Now, while I'd hate to tackle the job of handling an "&c.," for, like Victor Hugo's octopus, it might have too long a reach, I wouldn't give it up without trying. Somewhere near Leggat's a neat sign in the window announces that a gentleman desires to act in the capacity of "Man'fg'rs Agent." I have worn a bald spot on my head wondering what the abbreviation represented, but finally concluded the party in interest was a "mason critter" and had been instructed never to go back on the letter "G," which might come handy to have around some time or another. I remember seeing the same word—or abbreviation of it—handsomely embroidered in brass, on the delivery wagon of a prominent Brook Avenue lock maker. The use of it would thus seem to be

"A custom
More honored in the breach than in th' observance."

"Hop."

A Davenport Banquet.

From the Davenport (Iowa) *Leader:* The annual banquet given by the Sickels, Preston & Nutting Co., to their employees, which was postponed from last week on account of the weather, took place Thursday evening at Schuetzen park. After the banquet, which could not have been otherwise than thoroughly enjoyed by all, a musical programme was carried out, followed by dancing until a late hour. Those present were: Mr. and Mrs. J. R. Nutting, Mr. and Mrs. L. H. Nutting, Mr. and Mrs. Harbeck, Mr. and Mrs. Newhaus, Mr. and Mrs. A. L. Small, Mr. and Mrs. Dannacher, Mr. and Mrs. Fredersdorf, Mr. and Mrs. E. J. Douglas, Mr. and Mrs. J. T. Harrison and Mrs. C. A. Mitchell, the Messrs. Ralph Nutting, Carl Rascher, William Turner, Fred Kunkel, O. S. Clark, Oscar Harbeck, Howard Andrews, Edwin Crammer, Frank Adde, L. Beling, Charles Satorious, E. Wilkins and Misses Beryhill, Reupke, Harrison, Brandt, Turner and Crumpton. Apropos of the occasion the following timely bit of poetry was wafted into this department of the *Sunday Leader*. The author is supposed to be one of the banqueters who sometimes drops into poetry:

They went in a sleigh,
With seats made of hay,
All bound to be gay
To the Banquet.

On the house had a pull
Of course they got full,
On things hot and cool
At the Banquet.

They waltzed in a whirl
Each with his best girl
Till the bangs lost their curl
At the Banquet.

Came home late at night
All sandwiched in tight
Moon shining too bright
From the Banquet.

T'is now the "Next day"
With looks they all say,
They wish ev'ry day
Brought a Banquet.

Joseph Parker's Sons, of Germantown, Philadelphia, have accepted the agency for the Syracuse Crimson Rim Bicycles, and also that for the Elmore, and will make a strong push to have the riders of that vicinity well posted as to the merits of these wheels. They have added a bicycle and sundry department to their already large combination store.

At the annual meeting of the Hunter Arms Co., Fulton, N. Y., the following officers were elected: President, John Hunter; vice-president, Thomas Hunter, Sr.; secretary, John Hunter, Jr.; treasurer and manager, Thomas Hunter.

Porter to Partnership.—VII.

I have no doubt many who read this will agree with me that the hardest work they do is going to the city to buy goods. After a long experience at it one may so arrange his programme as to save himself a deal of work, but at its best it is tedious and wearing. To go to a large city an entire stranger with instructions to figure around before buying is getting the hardest task that could be laid on your shoulders. To a country youth there is an excitement in the bustle and hurrying him that of itself is tiresome. The streets of New York offer so much that is new and attractive to him that he is led on and on and never suspects that he has walked a very long distance until his legs begin to admonish him of the fact. I remember complaining to a friend that New York tired me much quicker than the same amount of travel would do at home, and he took down a map and showed me I had taken a walk of over four miles, and was comparing it with one of less than a mile at home.

It looks on the surface as if it were simply taking one's case to go into a store and write down the prices given you, and that a day of such work would be an easy one, but this is wide of the truth. You enter a store, introduce yourself to some one, have to give some idea of what you are after, and when a salesman waits on you have all your wits about you. You want his best prices, you want to post up on new goods and patterns, and you are on the alert to see where you can buy best, and what you had better buy.

My first day at this kind of work was a very tiresome one. I looked through three dry goods stocks, one notion stock, and a stock of crockery. I enlarged my ideas a great deal that day.

In our little town at home the people were mostly American born; when the Germans came there the general feeling among young and old America was that they were a very inferior class of people. The old native farmer sneered at "furriners" and vowed they ought never be allowed to vote. I have no doubt I imbibed much of this feeling, for I rather patronized my German customers, and felt as if they were behind our world. But I had not been long in New York till I began to get my ideas enlarged on this head.

In one of the largest stores I entered I was met by a German, and a glance told me all the others in the store were like him. He was only a clerk and suggested introducing me to one of the firm—Mr. H. I had never known what true politeness meant till that moment. Mr. H. greeted me as kindly as if he had been an old friend, put me at my ease in a moment, and seemed to pay me and my opinions a deference which, coming from him, was the most subtle kind of flattery. The entire accommodations of the store were placed at my disposal, and in such a way that I could have no doubt but that the offer was a hearty one; kind enquiries were made to see if I could not be assisted by them while in the city, and in talking about their goods not a word was said against other houses of different goods.

Since those days my ideas of life and of the world have grown somewhat, and the word "foreigner" no longer means a term of reproach. The nationality of a man long since ceased to be a matter of any importance to me, and if I have a weakness, it is to heartily despise the man who assumes airs because his father or grandfather happened to reach this side of the waters a few years ahead of some one else. It is a sure sign to me of a narrow experience and a very small mind.

Finishing my day's work about half-past four I started from Canal Street to the Astor House; I was pretty well fagged out, and was just going to hail a 'bus when I felt a hand on my coat. I had had enough of New York to know at once that my pockets were being picked, and I turned like a flash and caught the hand that was at my pocket, but instead of the expected thief it was my friend Fisher.

"Is it you, Fisher?"

"Yah, it was me; you walk like shteam poat; what's de matter?"

"Nothing; I am pretty tired, and was just going to hail a 'bus. Where are you going, and how are you getting on?"

"I pe goin' nowheres, and I tont got on at all."

"What's the matter?"

"De ship was not in—the man can't dell when."

"He don't know when it's coming?"

"Dot's it."

"What will you do?"

"To? I will to nodings."

"Will you stay here for it?"

"Shtay? to be sure I vill shtay; what I goom for?"

"Have you had your dinner?"

"Tinner? I should guess so. Tinner? I am yust goin' for mine supper."

"What are you going to do to-night?"

"Yusht schmoke."

"Come around to the Astor after supper?"

He agreed to come, and when I came down from dinner I found him waiting for me. We sat in the reading room an hour, he smoking and I reading the day's papers, when a hand was laid on my shoulder. It was Mr. Fry, and I suddenly remembered he had invited me to go to the theatre with him. I wanted to go, but I had asked Fisher over to see me, so I said to Fry, I was sorry I could not go, as I had a friend there who came to spend the evening with me.

"Ask him to come with us," said he. Fisher was ready to go, and had never been to the theatre in his life, he said, so we started for an uptown theatre.

I had been to many small shows in my village, but they were very small affairs, though I had enjoyed them thoroughly. Our hall was about 20x40, and the entire scenery consisted of one curtain. I had seen that used frequently in one evening for a parlor, a dungeon, a garden, a forest and a saloon, and I had enjoyed it each time. To go from such a hall as that to a New York theatre was indeed a change. The handsomely upholstered seats, the gilt on all wood work, the handsome scenery, the music and the actors; it was almost like seeing heaven; Fisher and I said little to each other till we got out doors; we shook hands with Fry, and Fisher turned to go to his hotel, He drew a long breath—"My gootness, Marks, dat was heafenly nice!"

I agreed with him perfectly.

Keg as Cash Box.

J. J. Van Wyck, a Hardware merchant in Kansas City, Kan., had an experience some time ago that he will remember for days to come. One night, as he was closing his store, two highwaymen leveled a revolver at his head, and commanded him to walk into the store. He walked. The robbers tied him to a chair and commenced a search for money. They could not find any, and Mr. Van Wyck was compelled to open the safe, but it was empty. The highwaymen grew angry and flourished their revolvers in the face of the prisoner, and told him that he must either tell where the money was or get ready to die. Fearing that his captors would execute their threats, he opened a keg of nails, and turned out $100 in cash, a lot of checks and some county scrip. After securing the money, the robbers took the keys of the house, walked out of the front door and locked their prisoner in.

The Wardwell Hardware Co., Rome, N. Y., have succeeded to the general Hardware business formerly owned and conducted by the firm of Wardwell Bros. & Co., and have assumed all outstanding obligations of said firm. The corporation is organized with a capital of $40,000.

A large fire occurred in Newton, Mass., on the morning of February 4th, destroying many blocks, in one of which was the Hardware store of S. O. Thayer.

Later Building Information.

THE SITUATION IN PHILADELPHIA.

The building interest of Philadelphia at the close of 1894 may fairly be classed prosperous, considering the awful stringency in affairs involving financial consideration. The latter qualification cannot be attributed to local causes, but to national agitation of the tariff and monetary disturbance of the country, as well as the general fear of capital being endangered in large investments such as are necessary to conduct operations of great magnitude, and for which our city, in the matter of home building especially, leads all others in the nation.

One thing, however, is noticeable. The small percentage of those interested in this branch of trade who have been driven to the wall, or sought shelter under assignments, will not exceed, we may safely say, ten per cent. of the whole number. Where individual structures or buildings of a public character have been erected, the percentage is even less than the above, showing a judicious and careful expenditure of money in this particular line. Of course supply and demand always govern the market in buildings as well as other sources of business; hence, when labor is hampered and restricted and becomes what may be called panic-stricken, the burden falls largely upon the producer of our first consideration, a home; and whether purchased or rented the result is the same financially. Still upon the whole, all things considered, the outlook for 1895 is better than the one just past, and is very encouraging indeed.

I herewith append a tabulated result of 1894 in houses alone, gleaned from a reliable and best source, the Real Estate Record and Builders' Guide of this city, from which you can form some conclusion as to our claim as an individual home building city:

1894.	Value.
Two-story dwellings, 3,905	$7,810,000
Three-story dwellings, 2,001	7,603,800
Four-story dwellings, 16	110,500
	$15,524,300

In addition to the above we have erected ten large schoolhouses, costing $641,000, and miscellaneous buildings not enumerated in the above, ninety-four in number, costing $1,897,500.

ST PAUL.

Builders' Exchange: Your kind favor, inquiring as to the business situation in this city, was duly received. In answer will say that, at the close of 1893, business matters pertaining to building were in almost a desperate condition, but towards the close of 1894 a much better feeling prevailed, one of confidence and expectation of a revival of business. The panicky feeling of a year ago is gone, and a moderately fair season of building is expected. Building business reached its lowest depths at the close of 1893. In 1894 came a lull in the downward storm. Now we are enjoying in anticipation a revival of business.

Some Ancient Iron Workers.

Not many industries have that antiquity and so well traced a genealogy as Hardware. The strain of blood found in the first workman in metals was certainly remarkable. His grandfather was naturally Adam, but, unlike most mortals, his "tree" is well defined and his heredity interesting. Descended from Cain, he probably acquired, the phrenologist would say, a large development of the bump called Destructiveness, and quite necessary, it is said, to the pounder of metal. A son of Cain was Enoch, a boy of whom he thought so much as to name the city that he had built after him. Cain was an industrious, active, high-tempered fellow, full of resources: but he must have felt sorely the need of Hardware in building his city. Enoch had a son called Irad and a grandson called Mehujael. Mehujael continued the line with Methusael, and then came the wicked Lamech, who married two wives, almost simultaneously, without the sanction of a divorce court, and he was also a self-confessed murderer. One of his wives was Zillah, and by her Tubal Cain was born. He made an everlasting reputation as an artificer in brass and iron. He spent the greater portion of his time, however, in imparting to others the knowledge which had been so readily acquired by himself.

The process of making iron in those days consisted in placing lumps of ore in a fire of wood or charcoal, and when the reduction took place the mass was hammered into shape. The Assyrians, it is believed, made saws, knives and such tools, and it is understood that the Greeks were fairly adepts in hammering and tempering steel, and so on to the time of the Romans.

Then the chronology of the iron manufacture of steel goes on with this and that improvement until the present day, when we find the Bessemer process by which even highly phosphorized pig is rendered capable of furnishing a fairly good quality of steel.

"From Apprentice to Master."

Under the above caption, *Ironmongery*, an English publication devoted to Hardware, is republishing the series of entertaining articles now appearing in HARDWARE under the title "Porter to Partnership." In a notice of introduction, *Ironmongery* says: "At a time when pantomime claims so much attention, and nursery stories are receiving a vast amount of attention on the stage where artificiality is made to surround every incident, it may seem to some that it savors of Dick Whittingtonian romance to place before our readers the tale of progress indicated in the above title. But that the path of progress has been travelled in real life to the extent of enabling one starting at the lowest rung of the ladder in a business house to become a partner and even the principal of the firm is known to most of us who have considerable experience of this city of London. Here there are numerous men—and some of them a long way off old age yet—who have made the journey to fortune with great rapidity with the aid of hard and unflagging work, and we could name several who entered London, in very truth, without a shilling, who to-day occupy leading positions amongst the wealthy commercial men of the day. These are no doubt exceptional cases, but far more numerous are those in which the rise has been by errand boy or porter to a partnership in a good if not a princely business, and one such experience is being described in a series of articles now appearing in New York HARDWARE. The lesson is worth placing before the assistants and apprentices of our trade, and may stimulate all to greater exertion and a more healthy and hopeful view of the possibilities of the future."

On January 24th the stockholders of the Bridgeport Brass Co., Bridgeport, Conn., met, and elected the following directors: Charles R. Mitchell, Waterbury; George E. Somers, Nelson M. Beach, and Daniel W. Kissam, of this city; Frederick J. Kingsbury, Jr., of Fairfield; B. L. Coe, Waterbury, and C. S. Upton, New York. The officers elected at the directors' meeting were: Charles R. Mitchell, president; George E. Somers, vice-president; Nelson M. Beach, treasurer, and Frederick J. Kingsbury, Jr., secretary.

The forges in Plumb, Burdict & Barnard's mammoth nut and bolt works, Tonawanda, N. Y., have been set in position. The firm expect to start putting in the machinery this week. The works will without doubt be in full blast by September, or sooner, and will employ 1000 operatives.

Aluminum heel tips are coming in vogue in England, and bid fair to come into general use. The leather is better protected than in the ordinary manner, and they will not slip on the wooden pavement, which is quite an advantage.

The Indiana Bicycle Co.

The Indiana Bicycle Co., Indianapolis, Ind., manufacturers of the well known Waverley wheels, are sending their friends a very artistic catalogue, which presents the claims of the Waverley in a first-class manner, and in which artist and the artistic printer have supplemented the efforts of a ready writer, to make plain before the wheel world just what the Waverley bicycles are, and what the company propose to do during this busy season of 1895. The catalogue is printed in colors with very handsome illustrations scattered through the work, showing the details of construction, the making of the frames and forks, the brazing, the finish, the nickel-plating, and also the various processes through which their sprockets, chains, cranks, bearings, etc., are put. In speaking of the quality of their output the company say: "In the past we have been content to merely equal the standard of our competitors, giving our patrons the advantage of greatly reduced prices. In the production of our '95 model, however, we were determined to build a wheel that would soon establish for itself the reputation of being the highest of all high grades, and we cheerfully recommend the '95 models as being constructed of the very best material that money will buy or human brains devise, and as being built by the best class of mechanics obtainable, under the supervision of the most competent heads known to the bicycle trade."

We are permitted in this connection to show, in Fig. 1, an illustration of the Waverley Scorcher, the weight of which

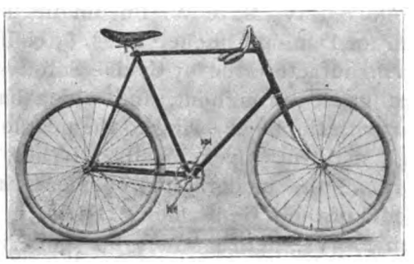

FIG. 1.—WAVERLEY SCORCHER.

with wood rims is 22 pounds, and with steel rims 25 pounds; gear 68, price, $85. The brief of this wheel is as follows: Frame, symmetrieal single tube diamond pattern. Nine and one-half inch ball bearing steering head. Height from center of crank hanger to top of seat post forging, 23 inches. Wheel base, 43½ inches. Front fork, drop forged crown. Flattened sides of Mannesmann seamless steel tubing tapered and gracefully curved. Wheels, 28-inch with Torrington swaged spokes full nickeled, tied at intersections, 28 to front and 32 to rear wheel, attached with brass nipples. Rims, our own make Waverley Clincher, steel or wood, as desired. Tires Waverley Clincher, made under G. & J. patents, 1 1-5 inches in diameter. Axles, lathe turned from solid bar of special axle steel. Bearings, Waverley superior ball bearings all around. Cups and cones turned from solid bar tool steel, then properly tempered. Sprockets, drop forged from finest quality steel. Improved pattern, both front and rear detachable. Chain, new Humber pattern, ¼-inch solid hardened steel block. Cranks, superior quality round pattern, drop forged tempered spring steel, 6¾-inch throw. Pedals, new Waverley combination pattern, either rat-trap or rubber, as desired, rat-traps being supplied unless otherwise ordered. Handle-bar, Mannesmann tubing ⅞-inch, gracefully tapered to ¾-inch at ends, 17 inches across, fitted with corkaline grips. Saddle post, "T" shape, hollow, and strongly re-enforced. Saddle, black Garford, '95 pattern. Finish, four coats superior black enamel. Trimmings heavily nickeled on copper, including front fork ends. Accessories, black tool bag supplied with monkey and flat wrench, pump, oil can and repair outfit. Weight, with Clincher tires and steel rims, 25 pounds. With wood rims two to three pounds less, according to weight of tires. Gear, 68.

In Fig. 2 may be seen their Waverley Belle, the weight of which, with wood rims is 23 pounds, with steel rims 25 pounds, and the price $75. The brief of this wheel is also given: Frame, symmetrical single tube, diamond pattern, with upper tube dropped and gracefully curved. Nine and one-half inch ball bearing steering head. Height from center of crank hanger to top of seat-post forging, 21 inches. Wheel base, 43¼ inches. Front fork, drop-forged crown. Flattened sides of Mannesmann seamless steel tubing, tapered and gracefully curved. Wheels, 26-inch, with Torrington swaged spokes, full nickeled, tied at intersections, 25 to front and 28 to rear wheel, attached with brass nipples. Rim, Waverley Clincher, steel or wood, as desired. Tires, Waverley Clincher, made under G. & J. patents, 1 5-8 inches in diameter. Axles, lathe turned from solid bar of special axle steel. Bearings, Waverley superior ball bearings all around. Cups and cones turned from solid bar tool steel, then properly tempered. Sprockets, drop forged from finest quality steel. Improved pattern, both front and rear detachable. Chain, new Humber pattern, ¼-inch solid hardened steel block. Cranks, superior quality round pattern, drop forged, tempered spring steel, 5½-inch throw. Pedals, new Waverley combination pattern. either rat-trap or rubber, as desired, rat-traps being supplied unless otherwise ordered. Handle-bar, Mannesmann tubing, ⅞ inch, gracefully tapered to ¾-inch at ends, 17 inches across, fitted with corkaline grips. Saddle post, "T"

shape, hollow and strongly re-enforced. Saddle, black Garford, '95 pattern. Finish, four coats superior black enamel. Trimmings heavily nickeled on copper, including front fork ends. Accessories, black tool bag supplied with monkey and flat wrench, pump, oil can and repair outfit. Weight, with clincher tires and steel rims, 25 pounds. With wood rims two to four pounds less, according to weight of tires. Gear, 63.

The company will be pleased to send this catalogue and any other matter desired as to prices, etc., to any who may make application.

At a recent meeting of the Goodell Co., manufacturers of cutlery, at Antrim, N. H., the following officers were re-elected for the coming year: President and treasurer, ex-Gov. D. H. Goodell; vice-president, R. C. Goodell: clerk, H. A. Hurlin; directors, D. H. Goodell, E. F. Woods, E. W. Baker, D. D. Goodell, R. C. Goodell. The treasurer's report showed a very fair business for the year 1894 considering the hard times which have been affecting all classes of trade. The prospect for the year 1895 is hopeful. The company have recently come out with a new letter-head showing their factories, including the new electric light and power station.

Sperry & Alexander, dealers in cutlery and Hardware specialties, formerly at No. 28 Warren Street, New York, have recently removed to No. 10 Warren Street. The removal was necessary to accommodate their growing business. The new quarters are neatly arranged, large and commodious.

A Line of Excellent Wheels.

Edw. K. Tryon, Jr. & Co., Philadelphia, Pa., have issued a comprehensive catalogue of their Apollo, Cycloe and Fairy Bicycles. These wheels are described as strictly high grade, sold at a moderate figure, and made of the best material throughout, having drop forgings, and great care being given to the manufacture of the
